

**YASKAWA**

# Sigma-7 200V

# Quick. Fast. Reliable.

## Amplifiers

- Single & three-phase input
- Embedded fieldbus
  - » Pulse train / analog input
  - » MECHATROLINK-II
  - » MECHATROLINK-III
  - » EtherCAT
  - » PROFINET
  - » Command Option Type
- Single & dual axis amplifier
- Dual axis amplifier with built-in controller
- Single axis amplifier with IEC-based built-in controller

## Motors

- Rotary, Linear and Direct Drive Motors available
- Very compact design
- Available from 50W to 15kW

# Contents

## Rotary Servomotors

# Seven Reasons for Sigma-7

The Sigma Series of Servo Drives has evolved into the Sigma-7 Servo Drives, which provides you with the ultimate experience in seven key areas and delivers the optimal solution that only YASKAWA can offer.

1

## Comprehensive Motor and Amplifier Power Range

### Wide power range

- Very compact motors from 50W to 15kW
- Linear motors iron core and ironless with a peak force up to 7,560 N

2

## Savings through Performance

### Lower production costs

- Speed loop bandwidth of 3.1 kHz
- Shorter settling time, reduced positioning time, higher throughput

### No additional cooling necessary

- Ambient temperature -5 – 55 °C (max. 60 °C with derating)

### Energy savings and higher productivity

- High peak torque, fast acceleration, no amplifier oversizing
- Lightweight mechanics

### Higher performance

- Overload 350 % for 3 – 5 seconds
- High peak torque, fast acceleration

3

## Safety Features

### **Smooth integration of mandatory legal safety standards**

- The STO function is implemented by default in all Sigma-7 series servo amplifiers
- Build safer machines - Sigma-7 satisfies the requirements of SIL 3 and PL-e
- The safety functions SS1, SS2 and SLS can be integrated by using the safety module

4

## High Efficiency

### **Very low heat generation**

- Optimized magnetic circuit improves motor efficiency
- Improved motor efficiency reduces heat generation by about 20 %

5

## High Accuracy

### **Next level 24-bit absolute encoder for maximum accuracy**

- Resolution of 16 million pulses per revolution for extremely precise positioning

6

## Impressive System Performance

### **Very high precision teamed up with fast, smooth operation**

- Ripple compensation for highest demands in smoothness and dynamics
- Even for machines for which speed loop gains cannot be set high

7

## Outstanding Reliability

### **Even more reliability for your production**

- More than 15 million servo systems in the field
- Improved machine reliability, reduced service and maintenance costs, less downtime

# Servomotors

Rotary	SGMMV		SGM7A	
	<p>• Low inertia, ultra-small capacity • 10 W - 30 W</p>		<p>• Low inertia, high speed • 50 W - 7 kW</p>	
Direct Drive	SGM7J		SGM7G	
	<p>• Medium inertia, high speed • 50 W - 750 W</p>		<p>• Medium inertia, large torque • 300 W - 15 kW</p>	
Linear	SGM7D		SGM7E	
	<p>• Medium capacity, with core • Rated: 1.3 Nm - 240 Nm Peak: 4 Nm - 400 Nm</p>		<p>• Coreless, inner rotor • Rated: 2 Nm - 35 Nm Peak: 6 Nm - 105 Nm</p>	<p>• With core, inner rotor • Rated: 2 Nm - 200 Nm Peak: 6 Nm - 600 Nm</p>
Linear	SGMCS		SGMCV	
	<p>• Small capacity, coreless or Medium capacity, with core • Rated: 2 Nm - 200 Nm Peak: 6 Nm - 600 Nm</p>		<p>• Small capacity, with core • Rated: 4 Nm - 35 Nm Peak: 12 Nm - 105 Nm</p>	
Linear	SGLG		SGLFW / SGLFW2	
	<p>• Coreless model • Rated: 12.5 N - 750 N Peak: 40 N - 3000 N</p>		<p>• Model with F-type iron core • Rated: 25 N - 2520 N Peak: 86 N - 7560 N</p>	<p>• Model with T-type iron core • Rated: 130 N - 2000 N Peak: 380 N - 7500 N</p>

Note: Readily available up to 1.5kW. Others available on request.

Combination of Rotary Servomotors and SERVOPACKS

Note: Readily available up to 1.5 kW. Others available on request.

\*1 If you use this combination, performance may not be as good, e.g., the control gain may not increase, in comparison with using a Sigma-7 SERVOPACK.

\*1. If you use this combination, performance may not be as good, e.g., the control gain is 2.4 kW if you combine the SGM7G-30A with the SGD7S-200A.

\* 1. You must also use a YASKAWA Serial Converter Unit. The output signal will be multiplied by 8 bits (256 divisions) or 12 bits (4,096 divisions) in the Serial Converter Unit.

\* 2. The multiplier (number of divisions) depends on the Linear Encoder. Also, you must write the motor constant file to the Linear Encoder in advance.

\* 3. These are reference values for setting SERVOPACK parameters. Contact the manufacturer for actual linear encoder scale pitches.

\* 4. The maximum speeds given in the above table are the maximum applicable speeds of the encoders when combined with a YASKAWA SERVOPACK.

The actual speed will be restricted by either the maximum speed of the Linear Servomotor or the maximum speed of the Linear Encoder (given above).

\* 5. If you use the origin signals with a Linear Encoder from Renishaw plc, the origin may sometimes be falsely detected. If that occurs, use the BID/DIR signal to output the origin signal only in one direction.

\* 6. Use this model number to purchase the Serial Converter Unit.

\* 7. Use this model number to purchase the Sensor Head with Interpolator.

\* 8. Use this model number to purchase the Interpolator.

\* 9. Contact your YASKAWA representative.

\*10. Contact Mitutoyo Corporation for details on the Linear Encoders.

\*11. The speed is restricted for some SERVOPACKS.

Note: Confirm detailed specifications, such as the tolerances, dimensions, and operating environment, with the manufacturer of the Encoder before you use it.

## Recommended Encoders

### Absolute Rotary Encoder

Output Signal	Manufacturer	Encoder Type	Model		Relay Device between Fully-Closed Module and Rotary Encoder	Resolution [Bits]	Maximum Speed* <sup>1</sup> [min <sup>-1</sup> ]	
			Scale	Sensor Head				
Encoder for YASKAWA Serial Interface (Σ-LINK)	Magnescale Co., Ltd.	Sealed	RU77-4096ADF <sup>2</sup>		-	20	2,000	
			RU77-4096AFFT01 <sup>2</sup>			22	2,000	
	Heidenhain Corporation	Exposed	ECA4412 <sup>2</sup>			27	1,600	
			RCN2□10 <sup>2</sup>		EIB3391Y	28	800	
			RCN5□10 <sup>2</sup>			29	400	
			RCN8□10 <sup>2</sup>			26	3,000	
			ROC2310 <sup>2</sup>			28	800	
	Renishaw PLC	Sealed	ROC7310 <sup>2</sup>			29	400	
			RA23Y-□□□□□□□□□□ <sup>2</sup>			26	3,000	
			RA26Y-□□□□□□□□□□ <sup>2</sup>			23	14,600	
		Exposed	RA30Y-□□□□□□□□□□ <sup>2</sup>		-	26	3,250	
			RA30Y-□□□□□□□□□□ <sup>2</sup>			30	200	

\* 1. The maximum speeds given in the above table are the maximum applicable speeds of the encoders when combined with a YASKAWA SERVOPACK.

The actual speed will be restricted by either the maximum speed of the Linear Servomotor or the maximum speed of the Linear Encoder (given above).

\* 2. This is a single-turn absolute encoder.

Note: Confirm detailed specifications, such as the tolerances, dimensions, and operating environment, with the manufacturer of the Encoder before you use it.

8th ... 10th digit - Hardware Options Specifications		
Code	Specifications	Applicable Models
None	Without Options	All models
000	Without Options only used in combination with FT/EX	All models
001	Rack-mounted Duct-ventilated	SGD7S-R70A to -330A SGD7S-470A to -780A
002	Varnished	All models
008	Single-phase, 200 V power input	SGD7S-120A
020 <sup>*6</sup>	No dynamic brake External dynamic brake resistor	SGD7S-R70A to -2R8A SGD7S-3R8A to -780A
00A	Varnished and single- phase power input	All models

11th ... 13th digit - FT/EX Specifications	
Code	Specifications
None	None
F50 <sup>*8</sup>	Application function for integrated MPiec
F82 <sup>*7</sup>	Application function option for special motors, SGM7D motor drive
F83 <sup>*7</sup>	Application function option for special motors, SGM7D motor drive, indexing

Note:

Depending on configuration choices made, the model code might end after the 7th or 10th digit, or involve all 13 digits.

Readily available up to 1.5 kW. Others available on request.

Additional accessories and software for SERVOPACKs is described in the Periphery section.

\*1. You can use these models with either a single-phase or three-phase power supply input.

\*2. A model with a single-phase, 200-VAC power supply input is available as a hardware option (model. SGD7S-120A|0A008).

\*3. The rated output is 2.4 kW if you combine the SGM7G-30A with the SGD7S-200A.

\*4. The same SERVOPACKs are used for both Rotary Servomotors and Linear Servomotors.

\*5. A command option module must be attached to the Command Option Attachable-type SERVOPACK for use.

\*6. Refer to the following manual for details.

Sigma-7-Series AC Servo Drive Sigma-7S/Sigma-7W SERVOPACK with Hardware Option Specifications Dynamic Brake Product Manual (Manual No.: SIEP S800001 73)

\*7. Refer to the following manual for details.

Sigma-7-Series AC Servo Drive Σ-7S SERVOPACK with FT/EX Specification for SGM7D Motor Product Manual (Manual No.: SIEP S800001 91)

\*8. Applicable for Sigma-7Siec models.

## FT Specifications

The know-how we have acquired in every market has resulted in the creation of a lineup of SERVOPACKs with FT specifications that have added functions to optimally suit a variety of applications. Please contact your local YASKAWA representative for further information.

FT Specifications	Applications	Additional Functions	Features	Interface			
				A/P	ML-II	ML-III	EtherCAT
FT19	Tracking	Built-in Less Deviation Control	Little delay in motor operations for position reference as a result of built-in less deviation control. Ideal for applications that require reference tracking performance (high position accuracy) during movement.	✓	-	✓	-
FT21	Machining and Cutting	Feed Shaft Supporting	Improved tracking ability and high-accuracy machining operations with the use of clearance (constant distance) control, predictive control, and quadrant projection compensation functions.	-	-	✓	-
FT40	Press and Injection Molding	Pressure Feedback	Highly accurate pressure control with input of pressure sensor signals directly to the SERVOPACK.	-	-	✓	-
FT41	Press and Injection Molding	Pressure Feedback	Highly accurate pressure control by feeding back the signals of the pressure sensors directly to the SERVOPACK through the MECHATROLINK-I/O system.	-	-	✓	-
FT60	Conveyance	Three-Point Latching	The host controller can detect the orientation of the workpiece or offsets in multiple workpieces based on the information on the three positions input to the SERVOPACK.	-	-	✓	-
FT62	Conveyance and Alignment	Triggers at Pre-set Positions and Rotational Coordinate System	Addition of pass-through signals for designated points to enable coordinated operations with the use of trigger signals. Turntables can be easily controlled with infinite-length coordinates.	-	-	✓	-
FT63	Conveyance	Built-in Semi-Closed/Fully-Closed Loop Control Online Switching Function	Allows loop control to be switched between semi-closed/fully-closed while online.	✓	-	✓	-
FT70	Gantry	Built-in Optimal Gantry Control	Three built-in functions (Position correction table, Synchronized stopping during alarms, and the Position deviation between axes overflow detection) effective for driving gantries.	-	-	✓	-
FT77	Conveyance	Built-in Torque/Force Assistance	Multiple SERVOPACKs can be used for applications that require more than one axis to easily build a system will increase the torque or force up to five times.	✓	-	✓	-
FT79	Indexing	Built-in INDEXER	Convenient positioning functions (ZONE signal outputs, job speed table, homing, other) added for high-precision and high-speed positioning without a motion controller.	✓	-	-	-
FT81	For Special Motors	Harmonic Drive Systems Actuator	SERVOPACKs with the capability to use Harmonic Drive Systems.	-	✓	✓	✓
FT82	For Special Motors	SGM7D Motor Drive	SERVOPACKs with high torque, high precision, and a user-friendly design for SGM7D motors.	✓	✓	✓	✓
FT83	For Special Motors	SGM7D Motor Drive	SERVOPACKs with built-in INDEXER for SGM7D motors.	✓	-	-	-
FT84	Conveyance and Alignment with SGM7D	Triggers at Pre-set Positions and Rotational Coordinate System	Addition of pass-through signals for designated points to enable coordinated operations with use of trigger signals. Turntables can be easily controlled with infinite-length coordinates.	-	-	✓	-

# Specifications and Ratings

## Specifications

Voltage		200 V		
Model SGMMV-		A1A	A2A	A3A
Time Rating			Continuous	
Thermal Class			B	
Insulation Resistance			500 VDC, 10 MΩ min.	
Withstand Voltage			1,500 VAC for 1 minute	
Excitation			Permanent magnet	
Mounting			Flange-mounted	
Drive Method			Direct drive	
Rotation Direction		Counterclockwise (CCW) for forward reference when viewed from the load side		
Vibration Class *1		V15		
Environmental Conditions	Surrounding Air Temperature	0 °C to 40 °C		
	Surrounding Air Humidity	20% to 80% relative humidity (non-condensing)		
	Installation Site	<ul style="list-style-type: none"> <li>Must be indoors and free of corrosive and explosive gases.</li> <li>Must be well-ventilated and free of dust and moisture.</li> <li>Must facilitate inspection and cleaning.</li> <li>Must have an altitude of 1,000 m or less.</li> <li>Must be free of strong magnetic fields.</li> </ul>		
	Storage Environment	<p>Store the Servomotor in the following environment if you store it with the power cable disconnected.</p> <ul style="list-style-type: none"> <li>Storage Temperature: -20 °C to 60 °C (with no freezing)</li> <li>Storage Humidity: 20% to 80% relative humidity (non-condensing)</li> </ul>		
	Impact Acceleration Rate at Flange	490 m/s <sup>2</sup>		
Shock Resistance *2	Number of Impacts	2 times		
Vibration Resistance *2	Vibration Acceleration Rate at Flange	49 m/s <sup>2</sup>		
Applicable SERVOPACKS	SGD7S-	R90A, R90F		
	SGD7W-	1R6A *3, 2R8A *3		
	SGD7C-	1R6A, 2R8A *3		

\*1 A Vibration class of V15 indicates a vibration amplitude of 15 μm maximum on the Servomotor without a load at the rated motor speed.

\*2 The given values are for when the Servomotor shaft is mounted horizontally and shock or vibration is applied in the directions shown in the following figures. The strength of the vibration that the Servomotor can withstand depends on the application. Always check the vibration acceleration rate that is applied to the Servomotor with the actual equipment.

\*3 If you use a Servomotor together with a Sigma-7W or Sigma-7C SERVOPACK, the control gain may not increase as much as with a Sigma-7S SERVOPACK and other performances may be lower than those achieved with a Sigma-7S SERVOPACK.

## Ratings

Voltage		200 V		
Model SGMMV-		A1A	A2A	A3A
Rated Output *1	W	10	20	30
Rated Torque *1, *2	Nm	0.0318	0.0637	0.0955
Instantaneous Maximum Torque *1	Nm	0.0955	0.191	0.286
Rated Current *1	A	0.70	0.66	0.98
Instantaneous Maximum Current *1	A	2.0	1.9	2.9
Rated Motor Speed *1	min <sup>-1</sup>	3000		
Maximum Motor Speed *1	min <sup>-1</sup>	6000		
Torque Constant	Nm/A	0.0516	0.107	0.107
Motor Moment of Inertia	×10 <sup>-4</sup> kg·m <sup>2</sup>	2.72 (4.07)	4.66 (6.02)	6.68 (8.04)
Rated Power Rate *1	kW/s	3.72	8.71	13.7
Rated Angular Acceleration Rate *1	rad/s	117,000	137,000	143,000
Heat Sink Size (Aluminium) *3	mm	150 × 150 × 3	250 × 250 × 6	
Protective Structure *4		Totally enclosed, self-cooled, IP55 (except for shaft opening)		
Holding Brake Specifications *5	Rated Voltage	V	24 VDC±10%	
	Capacity	W	2.0	2.6
	Holding Torque	Nm	0.0318	0.0637
	Coil Resistance	Ω (at 20 °C)	320	221.5
	Rated Current	A (at 20 °C)	0.075	0.108
	Time Required to Release Brake	ms	40	
	Time Required to Brake	ms	100	
Allowable Load Moment of Inertia (Motor Moment of Inertia Ratio) *6		30 times		
Allowable Shaft Load *7	With External Regenerative Resistor			
	LF	mm	16	
	Allowable Radial Load	N	34	44
	Allowable Thrust Load	N	14.5	

## Notes:

The values in parentheses are for Servomotors with Holding Brakes.

\*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. These are typical values.

\*2. The rated torques are the continuous allowable torque values with an aluminum or steel heat sink of the dimensions given in the table.

\*3. Refer to the „Servomotor Heat Dissipation Conditions“ section for the relation between the heat sinks and derating rate.

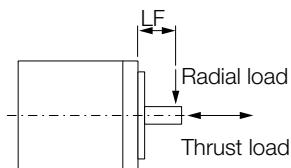

\*4. This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.

\*5. Observe the following precautions if you use a Servomotor with a Holding Brake.

- The holding brake cannot be used to stop the Servomotor.
- The time required to release the brake and the time required to brake depend on which discharge circuit is used. Confirm that the operation delay time is appropriate for the actual equipment.
- The 24-VDC power supply is not provided by YASKAWA.

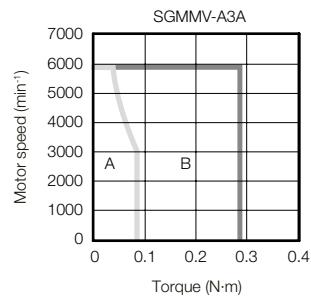

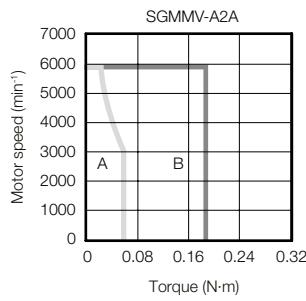

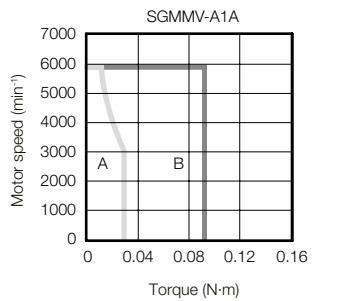

\*6. The motor moment of inertia scaling factor is the value for a standard Servomotor without a Holding Brake.

\*7. Design the mechanical system so that the thrust and radial loads applied to the Servomotor shaft end during operation do not exceed the values given in the table.

## Torque-motor Speed Characteristics

[A] : Continuous duty zone  
 [B] : Intermittent duty zone\*

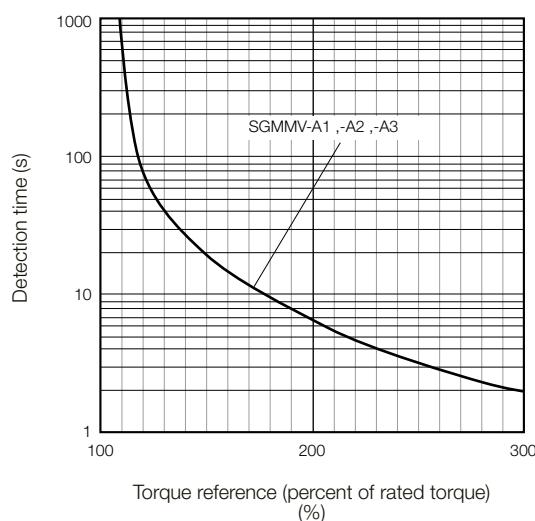

\* The characteristics are the same for three-phase 200 V, single-phase 200 V and single-phase 100 V input..

Notes:

- These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100 °C. These are typical values.
- The characteristics in the intermittent duty zone depend on the power supply voltage.
- If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
- If you use a Servomotor Main Circuit Cable that exceeds 20m, the intermittent duty zone in the torque motor speed characteristics will become smaller because the voltage drop increases.

## Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40 °C.

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in Torque-Motor Speed Characteristics.

## Allowable Load Moment of Inertia

The allowable load moments of inertia (motor moment of inertia ratios) for the Servomotors are given in the Servo-motor Ratings section. The values are determined by the regenerative energy processing capacity of the SERVOPACK and are also affected by the drive conditions of the Servomotor. Perform the required steps for each of the following cases. Use the SigmaSize+ AC Servo Drive Capacity Selection Program to check the driving conditions. Contact your YASKAWA representative for information on this program.

### Exceeding the allowable Load Moment of Inertia

Use one of the following measures to adjust the load moment of inertia to within the allowable value.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.

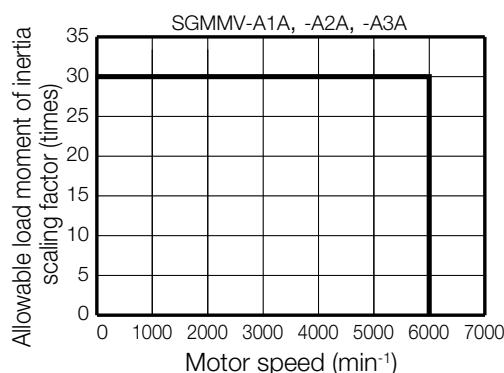

If the above steps are not possible, install an external regenerative resistor.

#### Information

An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Refer to Built-In Regenerative Resistor section for the regenerative power (W) that can be processed by the SERVOPACKs. Install an External Regenerative Resistor when the built-in regenerative resistor cannot process all of the regenerative power.

### SERVOPACKs without built-in Regenerative Resistors

The following graph shows the allowable load moment of inertia scaling factor of the motor speed (reference values for deceleration operation at or above the rated torque). Application is possible without an external regenerative resistor within the allowable value. However, an External Regenerative Resistor is required in the shaded areas of the graphs.

Note: Applicable SERVOPACK models: SGD7S-R90A, -1R6A, -R90F, and -2R1F

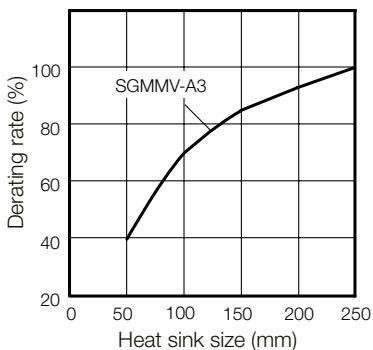

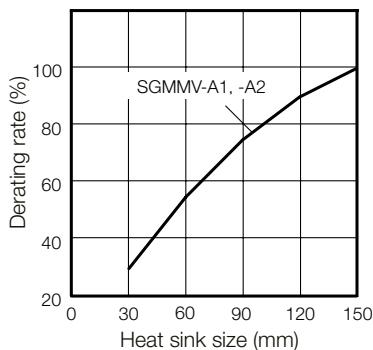

### When an external Regenerative Resistor is required

Install the External Regenerative Resistor. Refer to the "External Regenerative Resistors" section for the recommended products.

## Derating Rates

### Servomotor Heat Dissipation Conditions

The Servomotor ratings are the continuous allowable values when a heat sink is installed on the Servomotor. If the Servomotor is mounted on a small device component, the Servomotor temperature may rise considerably because the surface for heat dissipation becomes smaller. Refer to the following graphs for the relation between the heat sink size and derating rate.

#### Important

The actual temperature rise depends on how the heat sink (i.e., the Servomotor mounting section) is attached to the installation surface, what material is used for the Servomotor mounting section, and the motor speed. Always check the Servomotor temperature with the actual equipment.

#### Information

When using Servomotors with derating, change the detection timing of overload warning and overload alarm based on the overload detection level of the motor given in "Servomotor Overload Protection Characteristics".

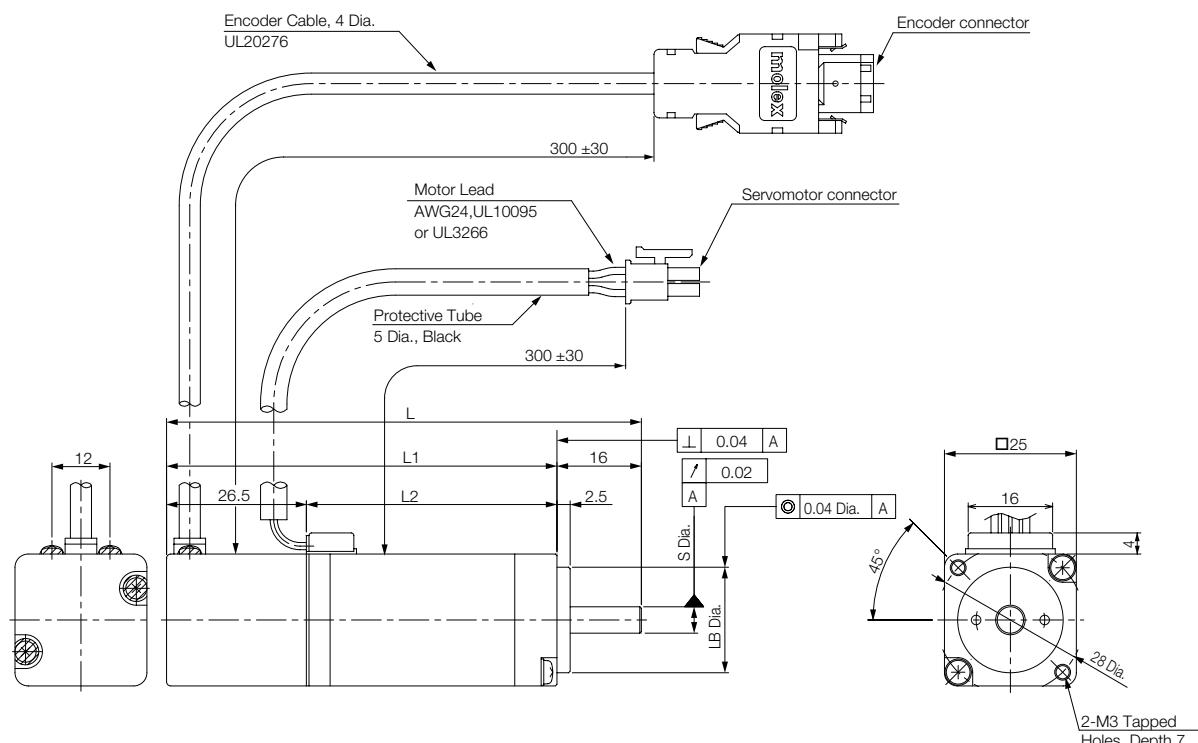

#### Note

The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your YASKAWA representative.

## External Dimensions

### Servomotors without Holding Brakes

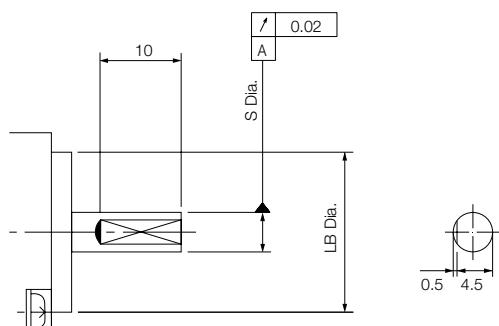

#### SGMMV-A1, -A2 and -A3

## Selecting Cables SGMMV

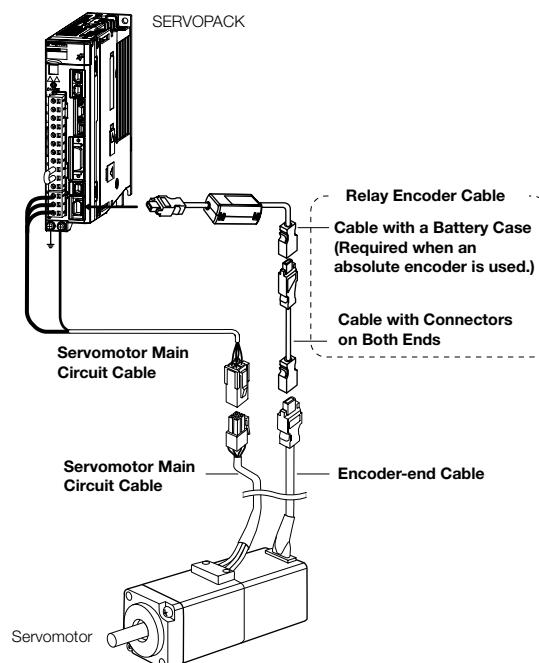

### Cable Configurations

The cables shown below are required to connect a Servomotor to a SERVOPACK.

#### Encoder Cable of 20 m or less

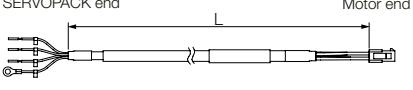

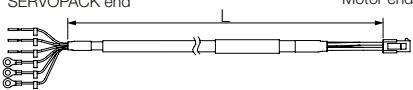

#### Encoder Cable of 30 m to 50 m (Relay Cable)

Note:

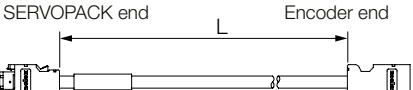

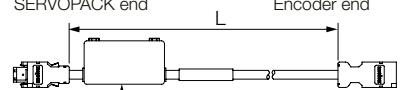

1. If the Encoder Cable length exceeds 20 m, be sure to use a Relay Encoder Cable.
2. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torquemotor speed characteristics will become smaller because the voltage drop increases.
3. Refer to the following manual for the following information.
  - Cable dimensional drawings and cable connection specifications
  - Order numbers and specifications of individual connectors for cables
  - Order numbers and specifications for wiring materials: Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

## Servomotor Main Circuit Cables

Description	Length	Order Number		Appearance
		Standard Cable	Flexible Cable*	
For Servomotors without Holding Brakes	3m	JZSP-CF1M00-03-E	JZSP-CF1M20-03-E	
	5m	JZSP-CF1M00-05-E	JZSP-CF1M20-05-E	
	10m	JZSP-CF1M00-10-E	JZSP-CF1M20-10-E	
	15m	JZSP-CF1M00-15-E	JZSP-CF1M20-15-E	
	20m	JZSP-CF1M00-20-E	JZSP-CF1M20-20-E	
	30m	JZSP-CF1M00-30-E	JZSP-CF1M20-30-E	
	40m	JZSP-CF1M00-40-E	JZSP-CF1M20-40-E	
	50m	JZSP-CF1M00-50-E	JZSP-CF1M20-50-E	
For Servomotors with Holding Brakes	3m	JZSP-CF1M03-03-E	JZSP-CF1M23-03-E

	SGD7W- SGD7C-	1R6A <sup>4</sup>	2R8A <sup>4</sup>	1R6A, 2R8A <sup>4</sup>	2R8A, 5R5A <sup>4</sup> , 7R6A <sup>4</sup>	5R5A, 7R6A	-					

Note: Readily available up to 1.5kW. Others available on request.

\*1 A Vibration class of V15 indicates a vibration amplitude of 15 µm maximum on the Servomotor without a load at the rated motor speed.

\*2 The given values are for when the Servomotor shaft is mounted horizontally and shock or vibration is applied in the directions shown in the following figures. The strength of the vibration that the Servomotor can withstand depends on the application. Always check the vibration acceleration rate that is applied to the Servomotor with the actual equipment.

Shock Applied to the Servomotor

Vibration Applied to the Servomotor

\*3 Refer to the Derating Rates section.

\*4 If you use a Servomotor together with a Sigma-7W or Sigma-7C SERVOPACK, the control gain may not increase as much as with a Sigma-7S SERVOPACK and other performances may be lower than those achieved with a Sigma-7S SERVOPACK.

Note: Readily available up to 1.5kW. Others available on request.

### Notes:

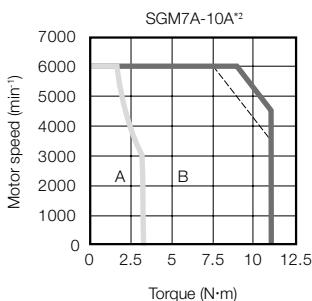

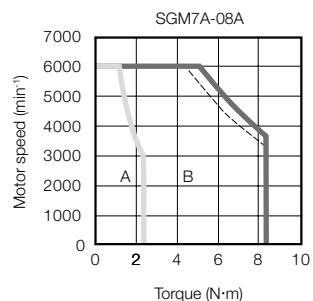

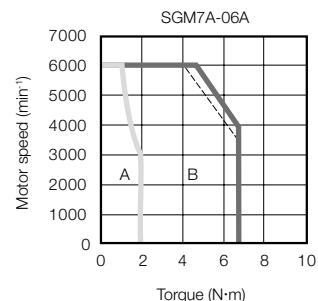

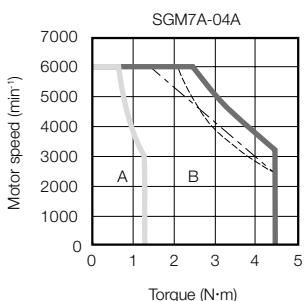

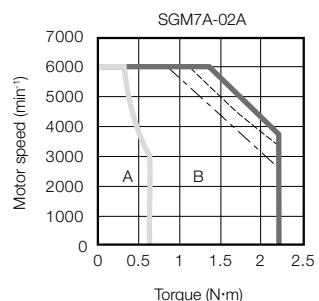

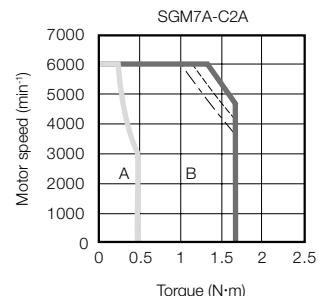

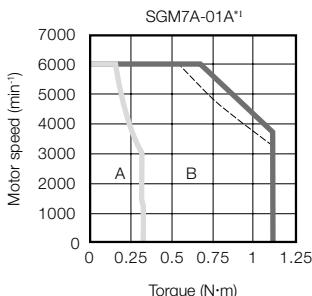

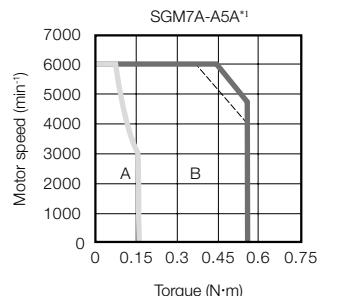

- \*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.  
The values for other items are at 20°C. These are typical values.
- \*2. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with an aluminum heat sink of the dimensions given in the table.
- \*3. Refer to the Servomotor Heat Dissipation Conditions section for the relation between the heat sinks and derating rate.
- \*4. This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.
- \*5. Observe the following precautions if you use a Servomotor with a Holding Brake.
  - The holding brake cannot be used to stop the Servomotor.
  - The time required to release the brake and the time required to brake depend on which discharge circuit is used. Confirm that the operation delay time is appropriate for the actual equipment.
  - The 24-VDC power supply is not provided by YASKAWA.
- \*6. The motor moment of inertia scaling factor is the value for a standard Servomotor without a Holding Brake.
- \*7. To externally connect a dynamic brake resistor, select hardware option specification 020 for the SERVOPACK. However, you cannot externally connect a dynamic brake resistor if you use the following SERVOPACKs (maximum applicable motor capacity: 400 W).
  - SGD7S-R70□□□A020 to -2R8□□□A020
  - SGD7W-1R6A20A020 to -2R8A20A020
  - SGD7C-1R6AMAA020 to -2R8AMAA020
- \*8. Design the mechanical system so that the thrust and radial loads applied to the Servomotor shaft end during operation do not exceed the values given in the table.

- \*9. If the heat sink is 250 mm × 250 mm × 6 mm, the rated output is 550 W and the rated torque is 1.75 N·m.  
Refer to the Servomotor Heat Dissipation Conditions section for details.

## Torque-Motor Speed Characteristics

A : Continuous duty zone     (solid lines): With three-phase 200-V or single-phase 230-V input  
 B : Intermittent duty zone     (dotted lines): With single-phase 200-V input  
 —— (dashed-dotted lines): With single-phase 100-V input

\* The characteristics are the same for three-phase 200 V and single-phase 200 V.  
 A single-phase power input can be used in combination with the SGD7S-120A□□A008.

### Notes:

- These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100 °C. These are typical values.
- The characteristics in the intermittent duty zone depend on the power supply voltage.
- If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
- If you use a Servomotor Motor Power Cable that exceeds 20 m, the intermittent duty zone in the torquemotor speed characteristics will become smaller because the voltage drop increases.

\*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100 °C. The values for other items are at 20 °C. These are typical values.

\*2. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40 °C with an aluminum heat sink of the dimensions given in the table.

\*3. Refer to the Servomotor Heat Dissipation Conditions section for the relation between the heat sinks and derating rate.

\*4. This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.

\*5. Observe the following precautions if you use a Servomotor with a Holding Brake.

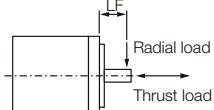

- The holding brake cannot be used to stop the Servomotor.
- The time required to release the brake and the time required to brake depend on which discharge circuit is used. Confirm that the operation delay time is appropriate for the actual equipment.
- The 24-VDC power supply is not provided by YASKAWA.

\*6. The motor moment of inertia scaling factor is the value for a standard Servomotor without a Holding Brake.

\*7. To externally connect a dynamic brake resistor, select hardware option specification 020 for the SERVOPACK. However, you cannot externally connect a dynamic brake resistor if you use the following SERVOPACKs (maximum applicable motor capacity: 400 W).

- SGD7S-R70□□□A020 to -2R8□□□A020
- SGD7W-1R6A20A020 to -2R8A20A020
- SGD7C-1R6AMAA020 to -2R8AMAA020

\*8. Design the mechanical system so that the thrust and radial loads applied to the Servomotor shaft end during operation do not exceed the values given in the table.

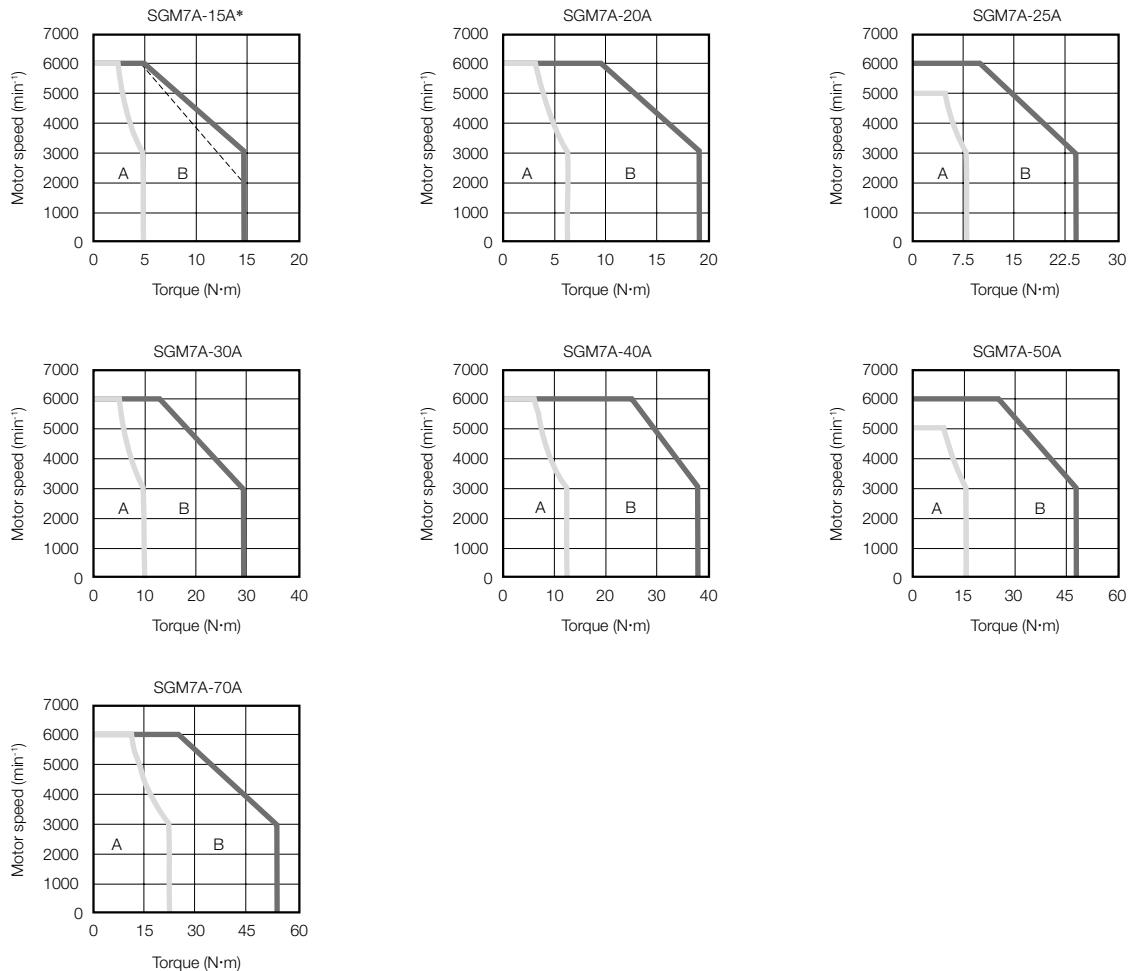

\*9. For the SGM7A-25A or SGM7A-50A, the maximum motor speed for the continuous duty zone is 5,000 min<sup>-1</sup>.

Use the Servomotor within the continuous duty zone for the average motor speed and effective torque.

## Torque-Motor Speed Characteristics

[A] : Continuous duty zone    (solid lines): With three-phase 200-V or single-phase 230-V input  
 [B] : Intermittent duty zone    (dotted lines): With single-phase 200-V input

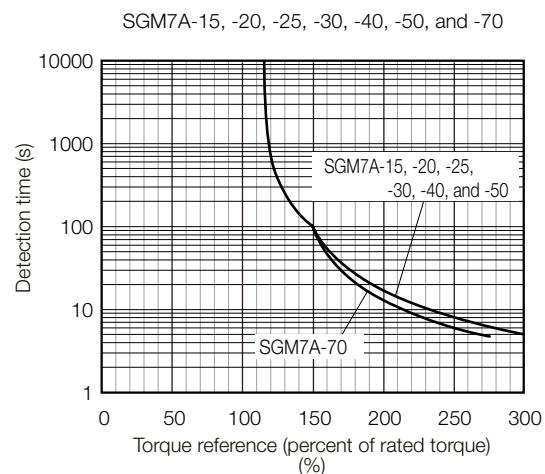

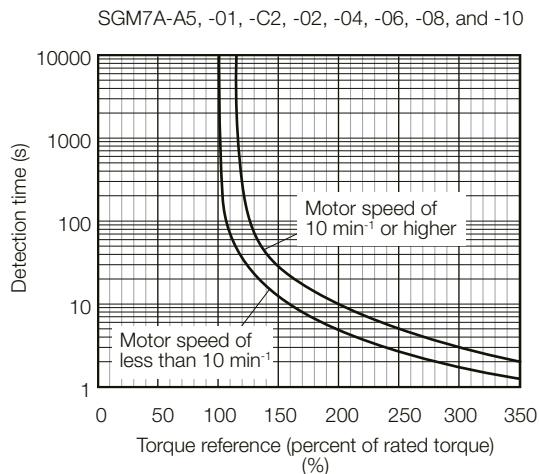

\* A single-phase power input can be used in combination with the SGD7S-120A□□A008.

Notes:

- 1 These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20 °C. These are typical values.
- 2 The characteristics in the intermittent duty zone depend on the power supply voltage.
- 3 If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
- 4 If you use a Servomotor Motor Power Cable that exceeds 20 m, the intermittent duty zone in the torquemotor speed characteristics will become smaller because the voltage drop increases.

## Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40 °C.

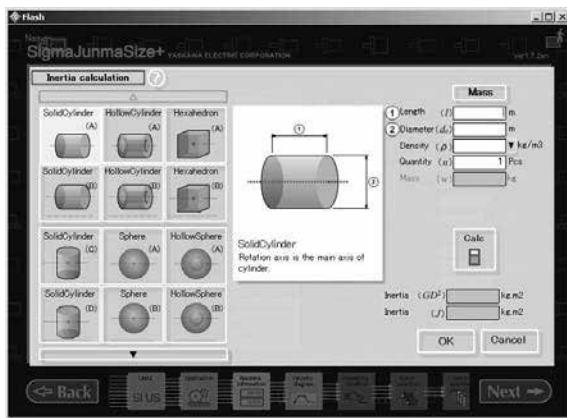

Note:

The above overload characteristics does not give permission to perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in Torque-Motor Speed Characteristics.

## Allowable Load Moment of Inertia

The load moment of inertia indicates the inertia of the load. The larger the load moment of inertia, the worse the response. If the moment of inertia is too large, operation will become unstable.

Refer to Servomotor Ratings. This value is provided strictly as a guideline and results depend on Servomotor driving conditions. Use the SigmaJunmaSize+ AC Servo Drive Capacity Selection Program to check the driving conditions. Contact your YASKAWA representative for information on this program.

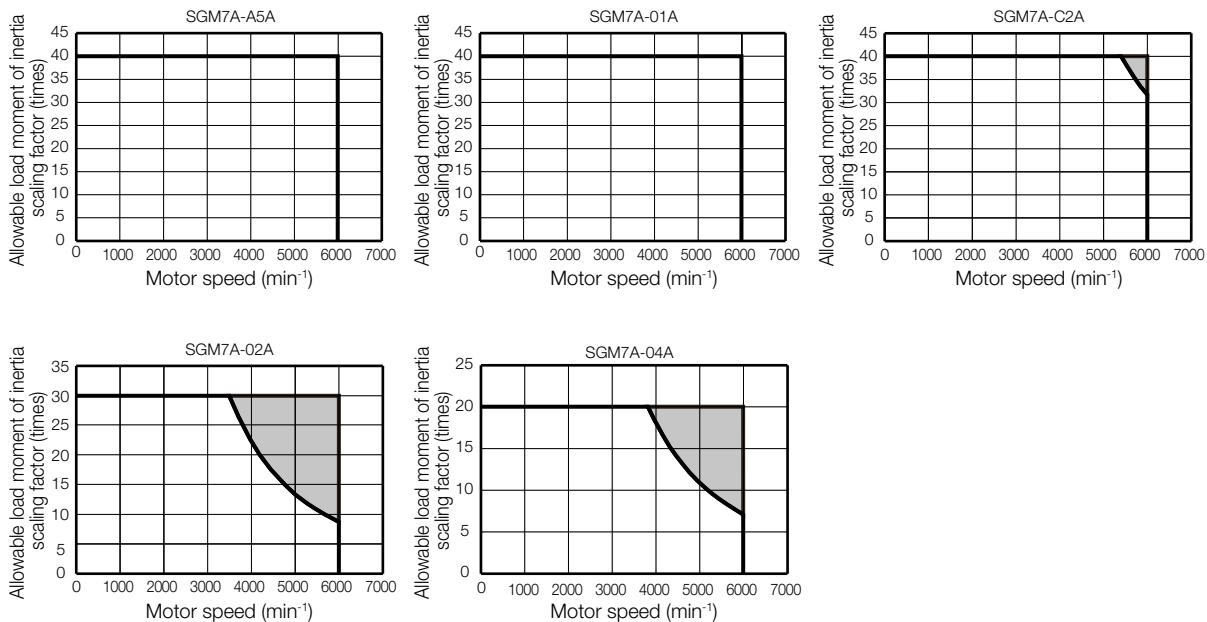

An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Perform one of the following steps if this occurs.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.
- Install an External Regenerative Resistor if the alarm cannot be cleared using the above steps.

Regenerative resistors are not built into SERVOPACKs for 400-W Servomotors or smaller Servomotors. Even for SERVOPACKs with built-in regenerative resistors, an External Regenerative Resistor is required if the energy that results from the regenerative driving conditions exceeds the allowable loss capacity (W) of the built-in regenerative resistor.

## SERVOPACKs without built-in Regenerative Resistors

The following graph shows the allowable load moment of inertia scaling factor of the motor speed (reference values for deceleration operation at or above the rated torque). Application is possible without an external regenerative resistor within the allowable value. However, an External Regenerative Resistor is required in the shaded areas of the graphs.

Note: Applicable SERVOPACK models: SGD7S-R70A, -R90A, -1R6A, -2R8A, -R70F, -R90F, -2R1F, and -2R8F

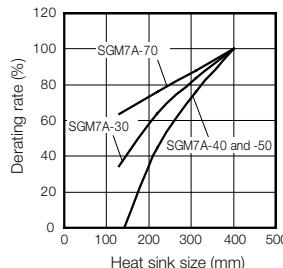

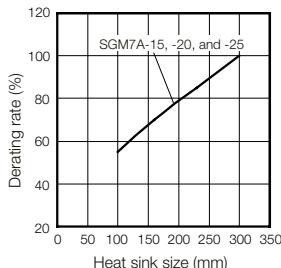

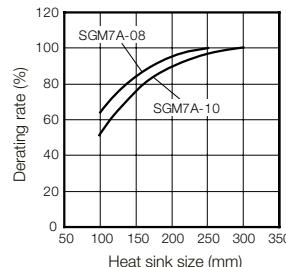

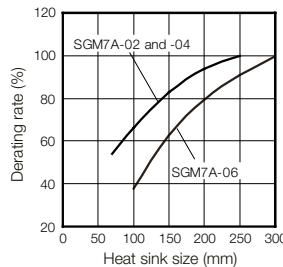

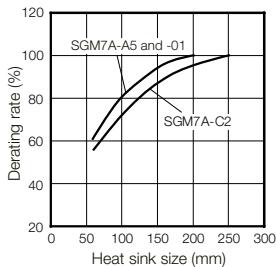

## When an External Regenerative Resistor Is Required

Install the External Regenerative Resistor. Refer to the External Regenerative Resistors section for the recommended products.

## Derating Rates

### Servomotor Heat Dissipation Conditions

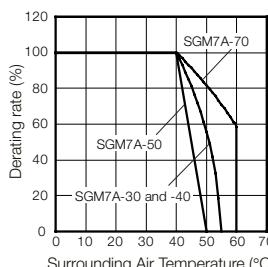

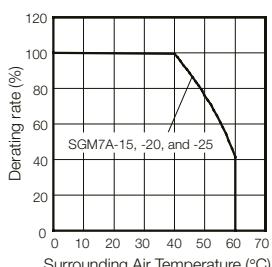

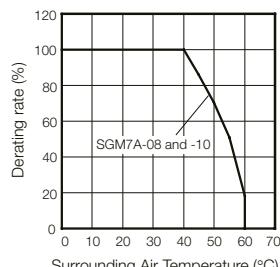

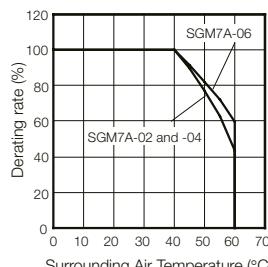

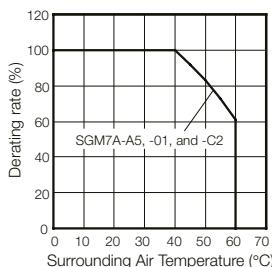

The Servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C when a heat sink is installed on the Servomotor. If the Servomotor is mounted on a small device component, the Servomotor temperature may rise considerably because the surface for heat dissipation becomes smaller. Refer to the following graphs for the relation between the heat sink size and derating rate.

The actual temperature rise depends on how the heat sink (i.e., the Servomotor mounting section) is attached to the installation surface, what material is used for the Servomotor mounting section, and the motor speed. Always check the Servomotor temperature with the actual equipment.

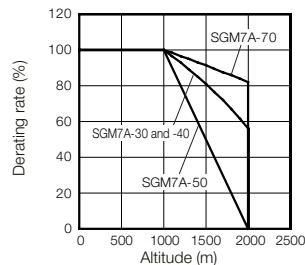

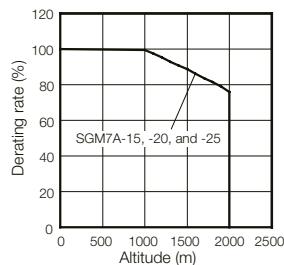

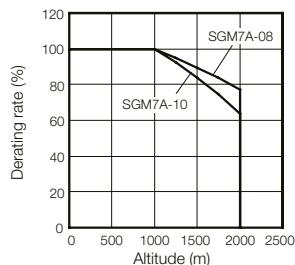

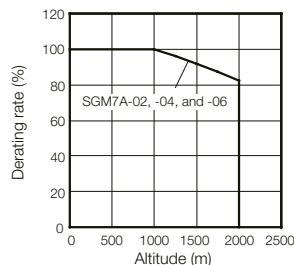

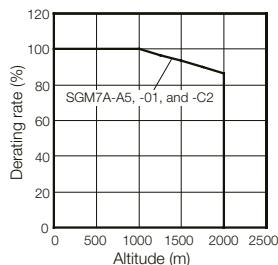

### Applications Where the Surrounding Air Temperature Exceeds 40°C

The Servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C. If you use a Servomotor at a surrounding air temperature that exceeds 40°C (60°C max.), apply a suitable derating rate from the following graphs.

## Applications Where the Altitude Exceeds 1,000 m

The Servomotor ratings are the continuous allowable values at an altitude of 1,000 m or less. If you use a Servomotor at an altitude that exceeds 1,000 m (2,000 m max.), the heat dissipation effect of the air is reduced. Apply the appropriate derating rate from the following graphs.

### Information

When using Servomotors with derating, change the detection timing of overload warning and overload alarm based on the overload detection level of the motor given in "Servomotor Overload Protection Characteristics".

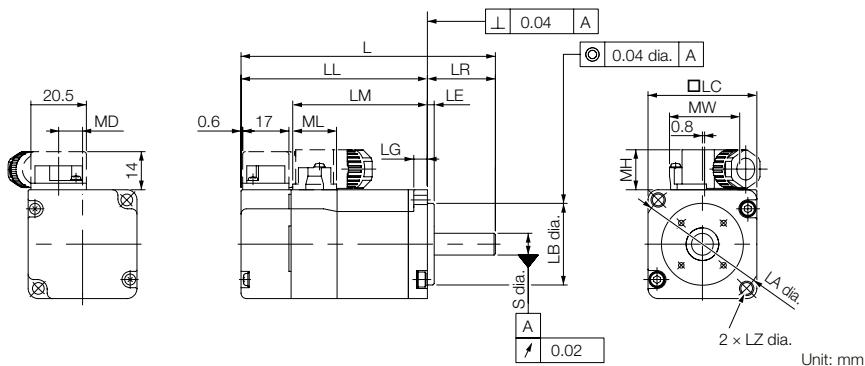

### Note

1. Use the combination of the SERVOPACK and Servomotor so that the derating conditions are satisfied for both the SERVOPACK and Servomotor.
2. The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your Yaskawa representative.

## Selecting Cables SGM7A

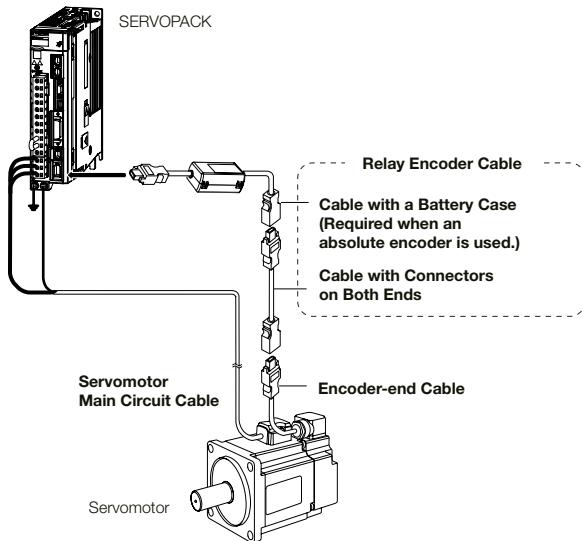

### Cable Configurations

The cables shown below are required to connect a Servomotor to a SERVOPACK.

**Encoder Cable of 20 m or less**

**Encoder Cable of 30 m to 50 m (Relay Cable)**

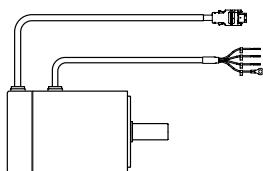

Note:

1. Cables with connectors on both ends that are compliant with an IP67 protective structure and European Safety Standards are not available from YASKAWA for the SGM7A-15A to SGM7A-70A Servomotors. You must make such a cable yourself. Use the Connectors specified by YASKAWA for these Servomotors. (These Connectors are compliant with the standards.) YASKAWA does not specify what wiring materials to use.
  2. If the Encoder Cable length exceeds 20 m, be sure to use a Relay Encoder Cable.
  3. If you use a Servomotor Motor Power Cable that exceeds 20m, the intermittent duty zone in the torquemotor speed characteristics will become smaller because the voltage drop increases.
  4. Refer to the following manual for the following information.
    - Cable dimensional drawings and cable connection specifications
    - Order numbers and specifications of individual connectors for cables
    - Order numbers and specifications for wiring materials
- Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

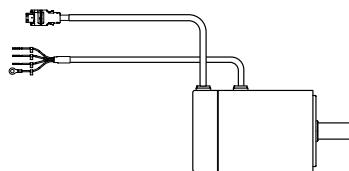

For the SGM7A-A5 to -10, there are different order numbers for the Servomotor Motor Power Cables and Encoder Cables depending on the cable installation direction. Confirm the order numbers before you order.

**Cable installed towards Load**

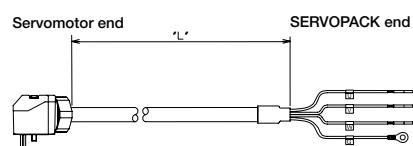

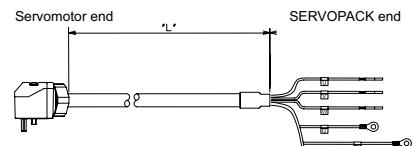

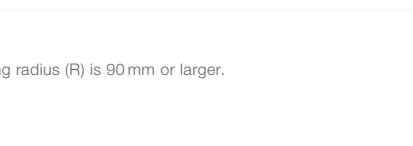

**Cable installed away from Load**

\*1. Use Flexible Cables for moving parts of machines, such as robots. The recommended bending radius (R) is 90 mm or larger.

\*2. This order number is for a set of two cables (Main Power Supply Cable and Holding Brake Cable). When you purchase them separately, the order numbers for Main Power Supply Cables are the same as for a Servomotor without a Holding Brake.

The following order numbers are for a Holding Brake Cable. These Standard Cables are Flexible Cables.

- Cable with Straight Plug: JZSP-U7B23-□□-E
- Cable with Right-angle Plug: JZSP-U7B24-□□-E

## Encoder Cables of 20 m or less

Servomotor Model	Description	Length	Order Number	Appearance
SGM7A-A5 to -10 50W - 1 kW	Cable direction to load side	3 m	JZSP-C7PI2D-03-E-G#	
		5 m	JZSP-C7PI2D-05-E-G#	
		10 m	JZSP-C7PI2D-10-E-G#	
		15 m	JZSP-C7PI2D-15-E-G#	
		20 m	JZSP-C7PI2D-20-E-G#	
	Cable direction away from load	3 m	JZSP-C7PI2E-03-E-G#	
		5 m	JZSP-C7PI2E-05-E-G#	
		10 m	JZSP-C7PI2E-10-E-G#	
		15 m	JZSP-C7PI2E-15-E-G#	
		20 m	JZSP-C7PI2E-20-E-G#	
SGM7A-15 to -30 1.5 W - 3 kW	Cable with battery case, direction to load side	3 m	JZSP-C7PA2D-03-E-G#	
		5 m	JZSP-C7PA2D-05-E-G#	
		10 m	JZSP-C7PA2D-10-E-G#	
		15 m	JZSP-C7PA2D-15-E-G#	
		20 m	JZSP-C7PA2D-20-E-G#	
	Cable with battery case, direction away from load side	3 m	JZSP-C7PA2E-03-E-G#	
		5 m	JZSP-C7PA2E-05-E-G#	
		10 m	JZSP-C7PA2E-10-E-G#	
		15 m	JZSP-C7PA2E-15-E-G#

# Specifications and Ratings

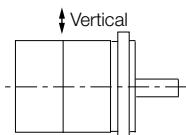

## Specifications

Voltage		200 V						
	Model SGM7J-	05A	01A	C2A	02A	04A	06A	08A
Time Rating		Continuous						
Thermal Class		B						
Insulation Resistance		500 VDC, 10 MΩ min.						
Withstand Voltage		1,500 VAC for 1 minute						
Excitation		Permanent magnet						
Mounting		Flange-mounted						
Drive Method		Direct drive						
Rotation Direction		Counterclockwise (CCW) for forward reference when viewed from the load side						
Vibration Class <sup>*1</sup>		V15						
Environmental Conditions	Surrounding Air Temperature	0 °C to 40 °C (With derating, usage is possible between 40 °C and 60 °C)* <sup>3</sup>						
	Surrounding Air Humidity	20% to 80% relative humidity (with no condensation)						
	Installation Site	<ul style="list-style-type: none"> <li>• Must be indoors and free of corrosive and explosive gases.</li> <li>• Must be well-ventilated and free of dust and moisture.</li> <li>• Must facilitate inspection and cleaning.</li> <li>• Must have an altitude of 1,000 m or less. (With derating, usage is possible between 1,000 m and 2,000 m.)*<sup>3</sup></li> <li>• Must be free of strong magnetic fields.</li> </ul>						
	Storage Environment	<p>Store the Servomotor in the following environment if you store it with the power cable disconnected.</p> <p>Storage Temperature: -20 °C to 60 °C (with no freezing) Storage Humidity: 20% to 80% relative humidity (with no condensation)</p>						
Shock Resistance <sup>*2</sup>	Impact Acceleration Rate at Flange	490 m/s <sup>2</sup>						
	Number of Impacts	2 times						
Vibration Resistance <sup>*2</sup>	Vibration Acceleration Rate at Flange	49 m/s <sup>2</sup>						
Applicable SERVOPACKS	SGD7S-	R70A, R70F	R70A, R90F	1R6A, 2R1F	2R8A, 2R8F		5R5A	
	SGD7W- SGD7C		1R6A <sup>*4</sup> , 2R8A <sup>*4</sup>	1R6A <sup>*4</sup> , 2R8A <sup>*4</sup>	2R8A, 5R5A <sup>*4</sup> , 7R6A <sup>*4</sup>		5R5A, 7R6A	

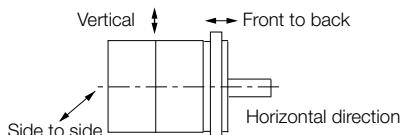

\*1. A vibration class of V15 indicates a vibration amplitude of 15 mm maximum on the Servomotor without a load at the rated motor speed.

\*2. The given values are for when the Servomotor shaft is mounted horizontally and shock or vibration is applied in the directions shown in the following figures.

The strength of the vibration that the Servomotor can withstand depends on the application. Always check the vibration acceleration rate that is applied to the Servomotor with the actual equipment.

Shock Applied to the Servomotor

Vibration Applied to the Servomotor

\*3. Refer to the following section for the derating rates.

\*4. If you use a Servomotor together with a S-7W or S-7C SERVOPACK, the control gain may not increase as much as with a S-7S SERVOPACK and other performances may be lower than those achieved with a S-7S SERVOPACK.

# Rotary Servomotors SGM7J

## Ratings

Voltage		200 V						
Model SGM7J-		A5A	01A	C2A	02A	04A	06A	08A

Heat Sink Size (Aluminium) <sup>*3</sup>	mm	200 × 200 × 6		250 × 250 × 6				
Protective Structure <sup>*4</sup>		Totally enclosed, self-cooled, IP67						
Holding Brake Specifications <sup>*5</sup>	Rated Voltage	V			24 VDC ±10%			
	Capacity	W	5.5		6		6.5	
	Holding Torque	Nm	0.159	0.318	0.477	0.637	1.27	1.91
	Coil Resistance	Ω (at 20 °C)	104.8±10%			96±10%		88.6±10%
	Rated Current	A (at 20 °C)	0.23			0.25		0.27
	Time Required to Release Brake	ms	60				80	
Allowable Load Moment of Inertia (Motor Moment of Inertia Ratio) <sup>*6</sup>			35 times			15 times	10 times	20 times
						25 times	20 times	15 times
Allowable Shaft Load <sup>*3</sup>	LF	mm	20			25		35
	Allowable Radial Load	N	78			245		392
	Allowable Thrust Load	N	54			74		147

\*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.  
The values for other items are at 20°C. These are typical values.

\*2. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with an aluminum heat sink of the dimensions given in the table.

\*3. Refer to the following section for the relation between the heat sinks and derating rate.

\*4. This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.

\*5. Observe the following precautions if you use a Servomotor with a Holding Brake.

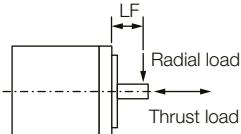

- The holding brake cannot be used to stop the Servomotor.
- The time required to release the brake and the time required to brake depend on which discharge circuit is used. Confirm that the operation delay time is appropriate for the actual equipment.
- The 24-VDC power supply is not provided by YASKAWA.

\*6. The motor moment of inertia scaling factor is the value for a standard Servomotor without a Holding Brake.

\*7. To externally connect a dynamic brake resistor, select hardware option specification 020 for the SERVOPACK. However, you cannot externally connect a dynamic brake resistor if you use the following SERVOPACKs (maximum applicable motor capacity: 400 W).

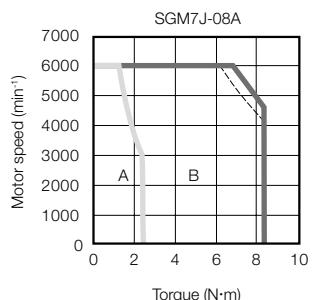

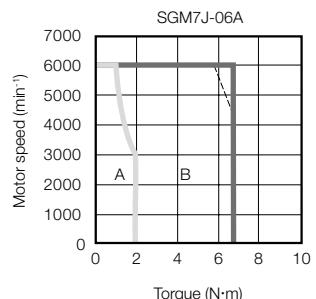

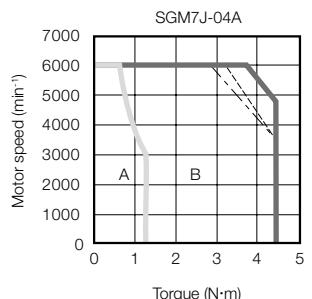

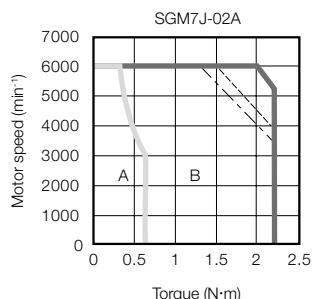

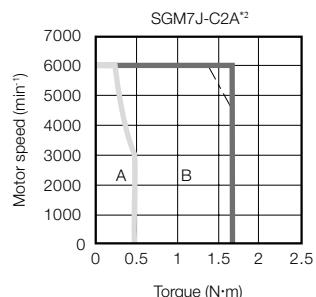

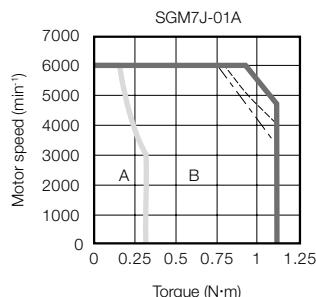

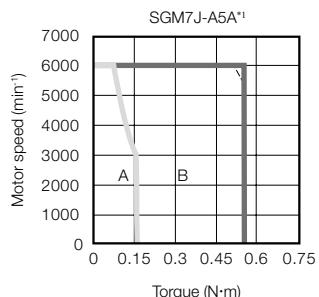

- SGD7S-R70□□□A020 to -2R8□□□A020
- SGD7W-1R6A20A020 to -2R8A20A020
- SGD7C-1R6AMAA020 to -2R8AMAA020

\*8. Design the mechanical system so that the thrust and radial loads applied to the Servomotor shaft end during operation do not exceed the values given in the table.

## Torque-motor Speed Characteristics

A : Continuous duty zone    (solid lines): With three-phase 200-V or single-phase 230-V input  
 B : Intermittent duty zone    (dotted lines): With single-phase 200-V input  
 —— (dashed-dotted lines): With single-phase 100-V input

\*1. The characteristics are the same for single-phase 200 V and single-phase 100 V input.

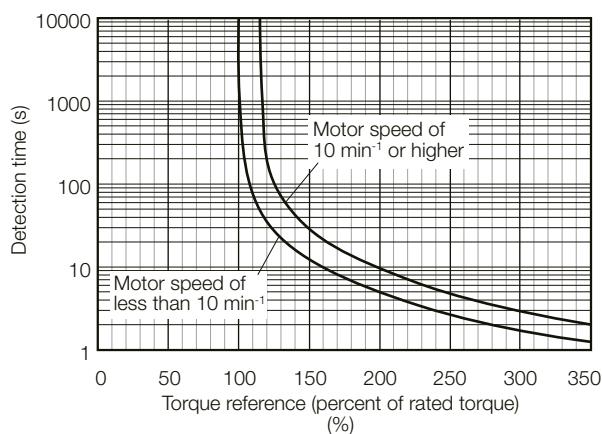

\*2. The characteristics are the same for three-phase 200 V and single-phase 200 V input.

### Notes:

- These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.
- The characteristics in the intermittent duty zone depend on the power supply voltage.
- If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
- If you use a Servomotor Motor Power Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

## Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40 °C.

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in Torque-Motor Speed Characteristics.

## Allowable Load Moment of Inertia

The allowable load moments of inertia (motor moment of inertia ratios) for the Servomotors are given in the Ratings of Servomotors. The values are determined by the regenerative energy processing capacity of the SERVOPACK and are also affected by the drive conditions of the Servomotor. Perform the required Steps for each of the following cases.

Use the SigmaSize+ AC Servo Drive Capacity Selection Program to check the driving conditions. Contact your YASKAWA representative for information on this program.

### Exceeding the allowable Load Moment of Inertia

Use one of the following measures to adjust the load moment of inertia to within the allowable value.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.

If the above steps is not possible, install an external regenerative resistor.

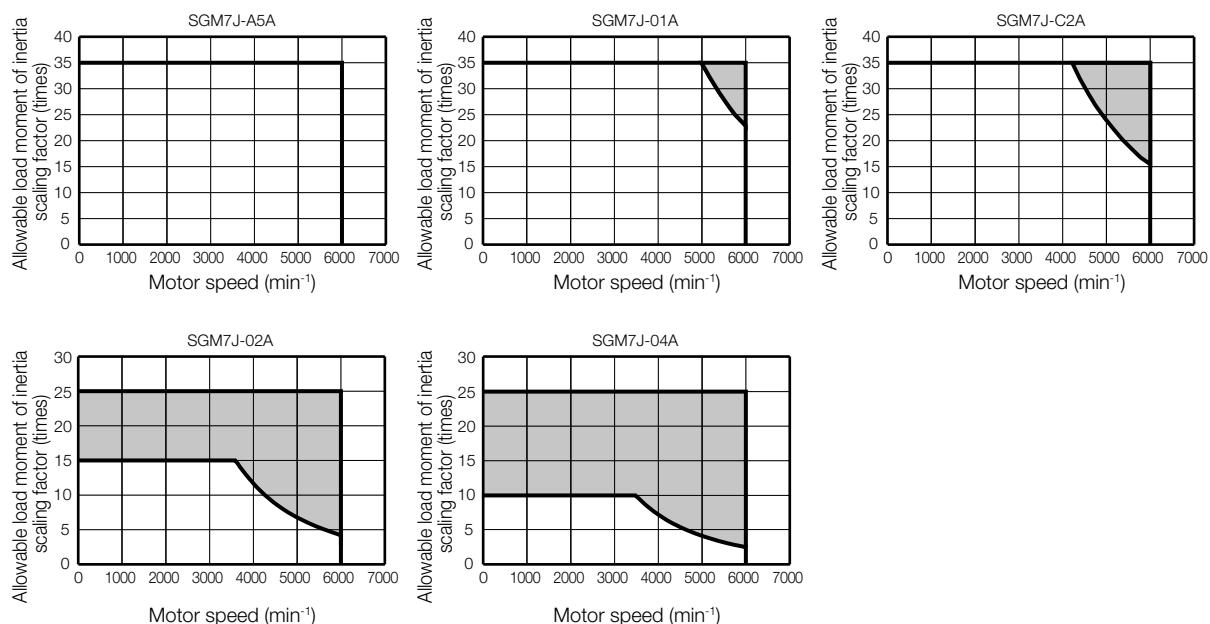

#### Information

An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Refer to Built-In Regenerative Resistor for the regenerative power (W) that can be processed by the SERVOPACKs.

Install an External Regenerative Resistor when the built-in regenerative resistor cannot process all of the regenerative power.

### SERVOPACKs without built-in Regenerative Resistors

The following graph shows the allowable load moment of inertia scaling factor of the motor speed (reference values for deceleration operation at or above the rated torque). Application is possible without an external regenerative resistor within the allowable value. However, an External Regenerative Resistor is required in the shaded areas of the graphs.

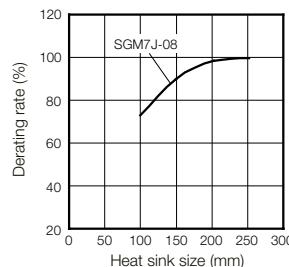

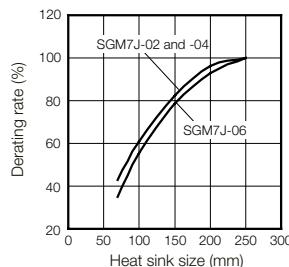

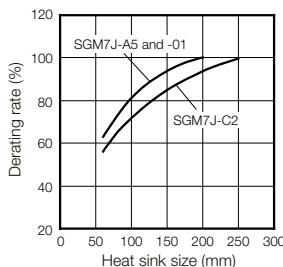

Note: Applicable SERVOPACK models: SGD7S-R70A, -R90A, -1R6A, -2R8A, -R70F, -R90F, -2R1F, and -2R8F

### When an External Regenerative Resistor is required

Install the External Regenerative Resistor. Refer to the following section for the recommended products.

## Servomotor Heat Dissipation Conditions

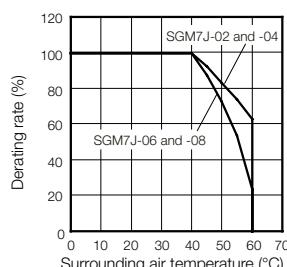

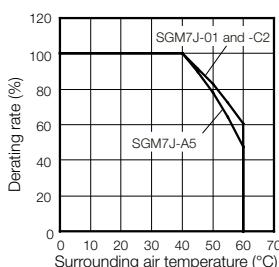

The Servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C when a heat sink is installed on the Servomotor. If the Servomotor is mounted on a small device component, the Servomotor temperature may rise considerably because the surface for heat dissipation becomes smaller. Refer to the following graphs for the relation between the heat sink size and derating rate.

The actual temperature rise depends on how the heat sink (i.e., the Servomotor mounting section) is attached to the installation surface, what material is used for the Servomotor mounting section, and the motor speed. Always check the Servomotor temperature with the actual equipment.

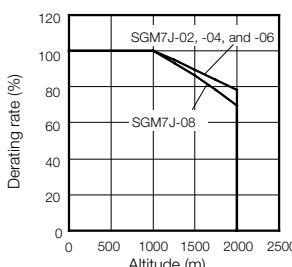

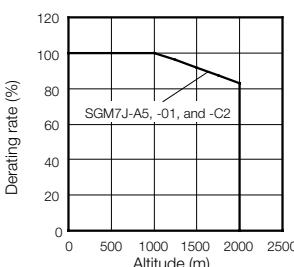

## Applications where the surrounding Air Temperature of the Servomotor exceeds 40 °C

The Servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C. If you use a Servomotor at a surrounding air temperature that exceeds 40°C (60°C max.), apply a suitable derating rate from the following graphs.

## Applications where the Altitude exceeds 1,000 m

The Servomotor ratings are the continuous allowable values at an altitude of 1,000 m or less. If you use a Servomotor at an altitude that exceeds 1,000 m (2,000 m max.), the heat dissipation effect of the air is reduced. Apply the appropriate derating rate from the following graphs.

### Information

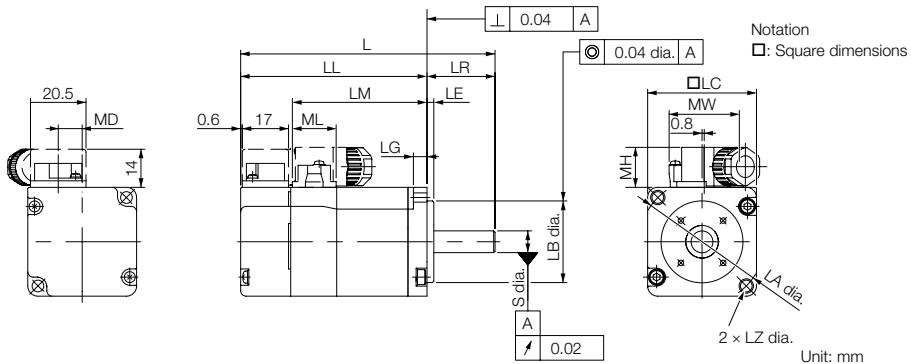

When using Servomotors with derating, change the detection timing of overload warning and overload alarm based on the overload detection level of the motor given in Servomotor Overload Protection Characteristics.

Notes:

1. Use the combination of the SERVOPACK and Servomotor so that the derating conditions are satisfied for both the SERVOPACK and Servomotor.
2. The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your YASKAWA representative.

## Selecting Cables SGM7J

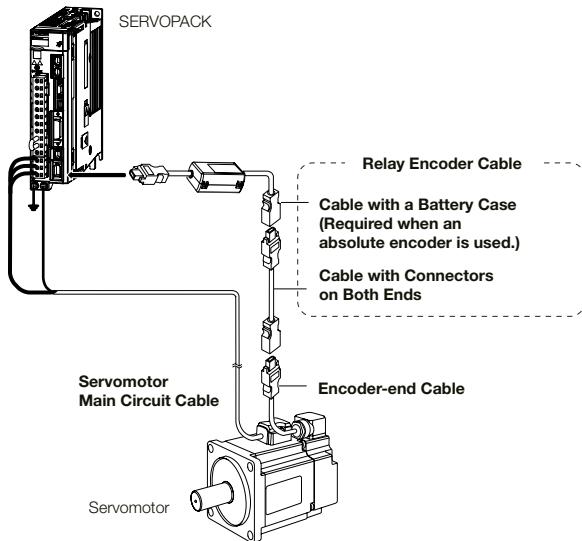

### Cable Configurations

The cables shown below are required to connect a Servomotor to a SERVOPACK.

**Encoder Cable of 20 m or less**

**Encoder Cable of 30 m to 50 m (Relay Cable)**

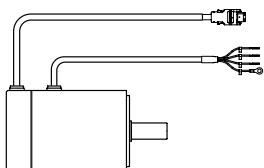

Note:

1. If the Encoder Cable length exceeds 20 m, be sure to use a Relay Encoder Cable.
2. If you use a Servomotor Motor Power Cable that exceeds 20 m, the intermittent duty zone in the torquemotor speed characteristics will become smaller because the voltage drop increases.
3. Refer to the following manual for the following information.
  - Cable dimensional drawings and cable connection specifications
  - Order numbers and specifications of individual connectors for cables
  - Order numbers and specifications for wiring materials: Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

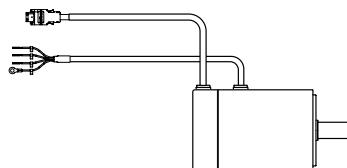

There are different order numbers for the Servomotor Motor Power Cables and Encoder Cables depending on the cable installation direction. Confirm the order numbers before you order.

**Cable installed towards Load**

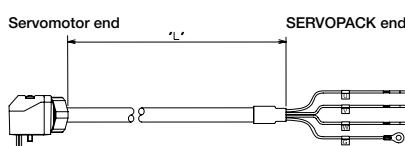

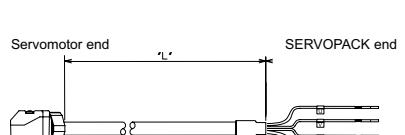

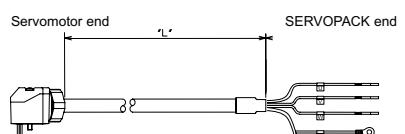

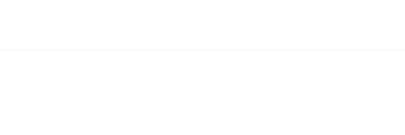

**Cable installed away from Load**

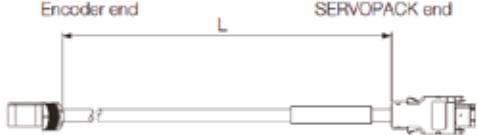

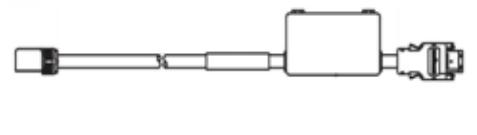

# Rotary Servomotors SGM7J

## Servomotor Motor Power Cables

Servomotor Model	Description	Length	Order Number	Appearance
			Flexible Cable*	
SGM7J-A5 to -C2 50 W to 150 W	For Servomotors without Holding Brakes Cable installed towards load	3m	JZSP-CSM21-03-E-G#	
		5m	JZSP-CSM21-05-E-G#	
		10m	JZSP-CSM21-10-E-G#	
		15m	JZSP-CSM21-15-E-G#	
		20m	JZSP-CSM21-20-E-G#	
SGM7J-02 to -06 200 W to 600 W	For Servomotors without Holding Brakes Cable installed towards load	3m	JZSP-CSM22-03-E-G#	
		5m	JZSP-CSM22-05-E-G#	
		10m	JZSP-CSM22-10-E-G#	
		15m	JZSP-CSM22-15-E-G#	
		20m	JZSP-CSM22-20-E-G#	
SGM7J-08 750 W, 1.0 kW	For Servomotors without Holding Brakes Cable installed towards load	3m	JZSP-CSM23-03-E-G#	
		5m	JZSP-CSM23-05-E-G#	
		10m	JZSP-CSM23-10-E-G#	
		15m	JZSP-CSM23-15-E-G#	
		20m	JZSP-CSM23-20-E-G#	
SGM7J-A5 to -C2 50 W to 150 W	For Servomotors with Holding Brakes Cable installed towards load	3m	JZSP-CSM31-03-E-G#	
		5m	JZSP-CSM31-05-E-G#	
		10m	JZSP-CSM31-10-E-G#	
		15m	JZSP-CSM31-15-E-G#	
		20m	JZSP-CSM31-20-E-G#	
SGM7J-02 to -06 200 W to 600 W	For Servomotors with Holding Brakes Cable installed towards load	3m	JZSP-CSM32-03-E-G#	
		5m	JZSP-CSM32-05-E-G#	
		10m	JZSP-CSM32-10-E-G#	
		15m	JZSP-CSM32-15-E-G#	
		20m	JZSP-CSM32-20-E-G#	
SGM7J-08 750 W, 1.0 kW	For Servomotors with Holding Brakes Cable installed towards load	3m	JZSP-CSM33-03-E-G#	
		5m	JZSP-CSM33-05-E-G#	
		10m	JZSP-CSM33-10-E-G#	
		15m	JZSP-CSM33-15-E-G#	
		20m	JZSP-CSM33-20-E-G#	

\* Use Flexible Cables for moving parts of machines, such as robots. The recommended bending radius (R) is 90 mm or larger.  
Note: The digit # of the order number represents the design revision number.

## Encoder Cables

Servomotor Model	Description	Length	Order Number	Appearance
SGM7J-A5 to 08 50 W - 750 W	Cable direction to load side	3 m	JZSP-C7PI2D-03-E-G#

Note: Readily available up to 1.5 kW. Others available on request.

\* The rated output is 2.4 kW if you combine the SGM7G-30A with the SGD7S-200A.

# Specifications and Ratings

## Specifications

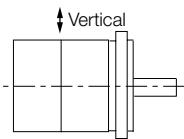

Voltage	200 V										
Model SGM7G-	03A	05A	09A	13A	20A	30A	44A	55A	75A	1AA	1EA
Time Rating	Continuous										
Thermal Class	UL:F, CE:F										
Insulation Resistance	500 VDC, 10 MΩ min.										
Withstand Voltage	1,500 VAC for 1 minute										
Excitation	Permanent magnet										
Mounting	Flange-mounted										
Drive Method	Direct drive										
Rotation Direction	Counterclockwise (CCW) for forward reference when viewed from the load side										
Vibration Class <sup>*1</sup>	V15										
Environmental Conditions	Surrounding Air Temperature	0 °C to 40 °C (With derating, usage is possible between 40 °C and 60 °C) <sup>*3</sup>									
	Surrounding Air Humidity	20% to 80% relative humidity (with no condensation)									
	Installation Site	<ul style="list-style-type: none"> <li>Must be indoors and free of corrosive and explosive gases.</li> <li>Must be well-ventilated and free of dust and moisture.</li> <li>Must facilitate inspection and cleaning.</li> <li>Must have an altitude of 1,000 m or less. (With derating, usage is possible between 1,000 m and 2,000 m.)<sup>*3</sup></li> <li>Must be free of strong magnetic fields.</li> </ul>									
	Storage Environment	Store the Servomotor in the following environment if you store it with the power cable disconnected. Storage Temperature: -20 °C to 60 °C (with no freezing) Storage Humidity: 20% to 80% relative humidity (with no condensation)									
Shock Resistance <sup>*2</sup>	Impact Acceleration Rate at Flange	490 m/s <sup>2</sup>									
	Number of Impacts	2 times									
Vibration Resistance <sup>*2</sup>	Vibration Acceleration Rate at Flange	49 m/s <sup>2</sup> (24.5 m/s <sup>2</sup> front to back)						24.5 m/s <sup>2</sup>			
	Applicable SERVOPACKs	3R8A	7R6A	120A	180A	330A	470A	550A	590A	780A	-
	SGD7S-SGD7W-SGD7C-	5R5A <sup>*4</sup> , 7R6A <sup>*4</sup>	7A6A								

Note: Readily available up to 1.5 kW. Others available on request.

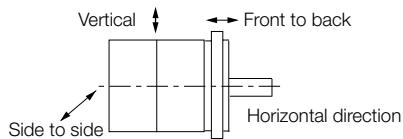

\*1. A vibration class of V15 indicates a vibration amplitude of 15 mm maximum on the Servomotor without a load at the rated motor speed.

\*2. The given values are for when the Servomotor shaft is mounted horizontally and shock or vibration is applied in the directions shown in the following figures.

The strength of the vibration that the Servomotor can withstand depends on the application. Always check the vibration acceleration rate that is applied to the Servomotor with the actual equipment.

Shock Applied to the Servomotor

Vibration Applied to the Servomotor

\*3. Refer to the following section for the derating rates.

\*4. If you use a Servomotor together with a S-7W or S-7C SERVOPACK, the control gain may not increase as much as with a S-7S SERVOPACK and other performances may be lower than those achieved with a S-7S SERVOPACK.

# Rotary Servomotors SGM7G

## Servomotor Ratings

Voltage		200 V									
Model SGM7G-		03A	05A	09A	13A	20A					
Rated Output <sup>*1</sup>	kW	0.3	0.45	0.85	1.3	1.8					
Rated Torque <sup>*1, *2</sup>	Nm	1.96	2.86	5.39	8.34	11.5					
Instantaneous Maximum Torque <sup>*1</sup>	Nm	5.88	8.92	14.2	23.3	28.7					
Rated Current <sup>*1</sup>	A	2.8	3.8	6.9	10.7	16.7					
Instantaneous Maximum Current <sup>*1</sup>	A	8.0	11	17	28	42					
Rated Motor Speed <sup>*1</sup>	min <sup>-1</sup>			1,500							
Maximum Motor Speed <sup>*1</sup>	min <sup>-1</sup>			3,000							
Torque Constant	Nm/A	0.776	0.854	0.859	0.891	0.748					
Motor Moment of Inertia	×10 <sup>-4</sup> kg·m <sup>2</sup>	2.48 (2.73)	3.33 (3.58)	13.9 (16.0)	19.9 (22.0)	26.0 (28.1)					
Rated Power Rate <sup>*1</sup>	kW/s	15.5 (14.1)	24.6 (22.8)	20.9 (18.2)	35.0 (31.6)	50.9 (47.1)					
Rated Angular Acceleration Rate <sup>*1</sup>	rad/s <sup>2</sup>	7,900 (7,180)	8,590 (7,990)	3,880 (3,370)	4,190 (3,790)	4,420 (4,090)					
Heat Sink Size <sup>*3</sup>	mm	250 × 250 × 6 (aluminium)			400 × 400 × 20 (steel)						
Protective Structure <sup>*4</sup>		Totally enclosed, self-cooled, IP67									
Holding Brake Specifications <sup>*5</sup>	Rated Voltage	V	24 VDC <sup>+10%</sup> <sub>0</sub>								
	Capacity	W	10								
	Holding Torque	Nm	4.5	12.7	19.6						
	Coil Resistance	Ω (at 20 °C)	56	59							
	Rated Current	A (at 20 °C)	0.43	0.41							
	Time Required to Release Brake	ms	100								
	Time Required to Brake	ms	80								
Allowable Load Moment of Inertia (Motor Moment of Inertia Ratio)		15 times	15 times	5 times							
				10 times							
Allowable Shaft Load <sup>*7</sup>	LF	mm	40	58							
	Allowable Radial Load	N	490	686	980						
	Allowable Thrust Load	N	98	343	392						

Note: Readily available up to 1.5 kW. Others available on request.

Note: The values in parentheses are for Servomotors with Holding Brakes.

\*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.

\*2. The rated torques are the continuous allowable torque values with an aluminum or steel heat sink of the dimensions given in the table.

\*3. Refer to the following section for the relation between the heat sinks and derating rate.

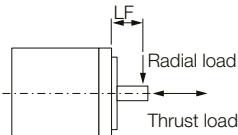

\*4. This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.

\*5. Observe the following precautions if you use a Servomotor with a Holding Brake.

- The holding brake cannot be used to stop the Servomotor.
- The time required to release the brake and the time required to brake depend on which discharge circuit is used. Confirm that the operation delay time is appropriate for the actual equipment.
- The 24-VDC power supply is not provided by YASKAWA.

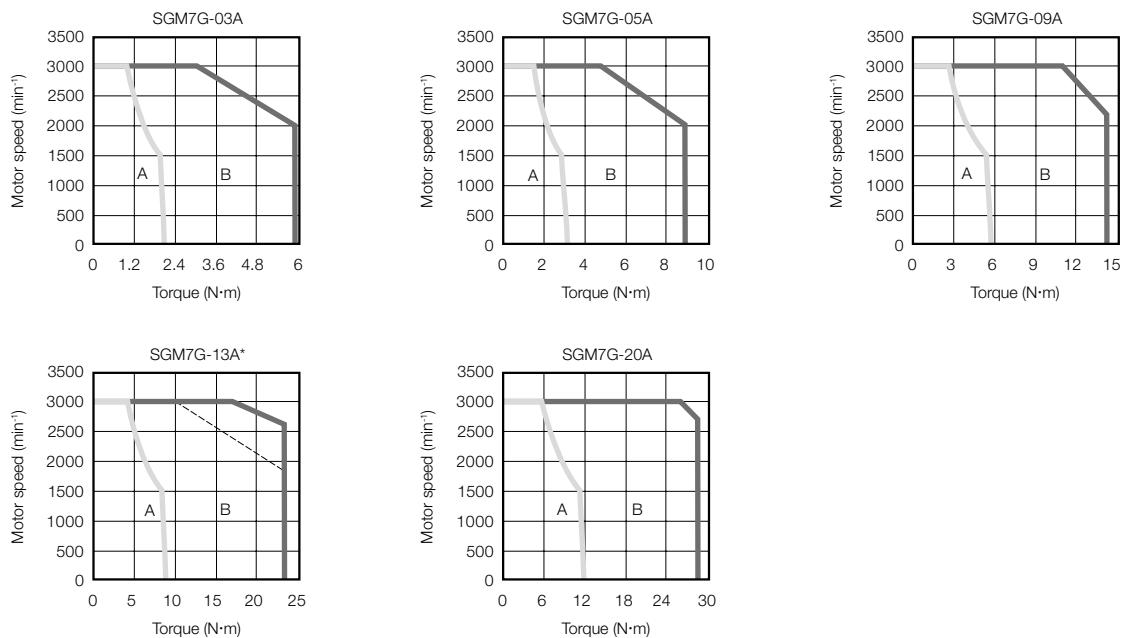

\*6. The motor moment of inertia scaling factor is the value for a standard Servomotor without a Holding Brake.

\*7. Design the mechanical system so that the thrust and radial loads applied to the Servomotor shaft end during operation do not exceed the values given in the table.

## Torque-motor Speed Characteristics

A : Continuous duty zone    ——— (solid lines): With three-phase 200-V or single-phase 230-V input  
B : Intermittent duty zone    - - - - (dotted lines): With single-phase 200-V input

\* A single-phase power input can be used in combination with the SGD7S-120A□□A008.

Notes:

1. These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C.
2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
4. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

## Servomotor Ratings

Model SGM7G-		30A	30A <sup>*6</sup>	44A	55A	75A	1AA	1EA
Rated Output <sup>*1</sup>	kW	2.9	2.4	4.4	5.5	7.5	11	15
Rated Torque <sup>*1, *2</sup>	Nm	18.6	15.1	28.4	35.0	48.0	70.0	95.4
Instantaneous Maximum Torque <sup>*1</sup>	Nm	54.0	45.1	71.6	102	119	175	224
Rated Current <sup>*1</sup>	A	23.8	19.6	32.8	37.2	54.7	58.6	78.0
Instantaneous Maximum Current <sup>*1</sup>	A	70	56	84	110	130	140	170
Rated Motor Speed <sup>*1</sup>	min <sup>-1</sup>				1,500			
Maximum Motor Speed <sup>*1</sup>	min <sup>-1</sup>			3,000			2,000	
Torque Constant	Nm/A	0.848	0.848	0.934	1.00	0.957	1.38	1.44
Motor Moment of Inertia	×10 <sup>-4</sup> kg·m <sup>2</sup>	46.0 (53.9)	46.0 (53.9)	67.5 (75.4)	89.0 (96.9)	125 (133)	242 (261)	303 (341)
Rated Power Rate <sup>*1</sup>	kW/s	75.2 (64.2)	49.5 (42.2)	119 (107)	138 (126)	184 (173)	202 (188)	300 (267)
Rated Angular Acceleration Rate <sup>*1</sup>	rad/s <sup>2</sup>	4,040 (3,450)	3,280 (2,800)	4,210 (3,370)	3,930 (3,610)	3,840 (3,610)	2,890 (2,680)	3,150 (2,800)
Heat Sink Size <sup>*3</sup>	mm	500 × 500 × 30 (steel)				650 × 650 × 35 (steel)		
Protective Structure <sup>*4</sup>					Totally enclosed, self-cooled, IP67			
Holding Brake Specifications <sup>*5</sup>	Rated Voltage	V		24 VDC	+10% 0			
	Capacity	W	18.5		25	32	35	
	Holding Torque	Nm	43.1		72.6	84.3	114.6	
	Coil Resistance	Ω (at 20 °C)	31		23	18	17	
	Rated Current	A (at 20 °C)	0.77		1.05	1.33	1.46	
	Time Required to Release Brake	ms		170			250	
	Time Required to Brake	ms	100		80			
Allowable Load Moment of Inertia (Motor Moment of Inertia Ratio) <sup>*6</sup>		5 times	3 times		5 times			
	With External Regenerative Resistor and Dynamic Brake Resistor	10 times	7 times		10 times			
Allowable Shaft Load <sup>*7</sup>	LF	mm	79		113	116		
	Allowable Radial Load	N	1,470		1,764	4,998		
	Allowable Thrust Load	N	490		588	2,156		

Note: Readily available up to 1.5 kW. Others available on request.

Notes: The values in parentheses are for Servomotors with Holding Brakes.

\*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C.  
These are typical values.

\*2. The rated torques are the continuous allowable torque values with an aluminum or steel heat sink of the dimensions given in the table.

\*3. Refer to the following section for the relation between the heat sinks and derating rate.

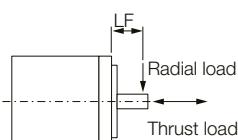

\*4. This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.

\*5. Observe the following precautions if you use a Servomotor with a Holding Brake.

- The holding brake cannot be used to stop the Servomotor.
- The time required to release the brake and the time required to brake depend on which discharge circuit is used. Confirm that the operation delay time is appropriate for the actual equipment.
- The 24-VDC power supply is not provided by YASKAWA.

\*6. The motor moment of inertia scaling factor is the value for a standard Servomotor without a Holding Brake.

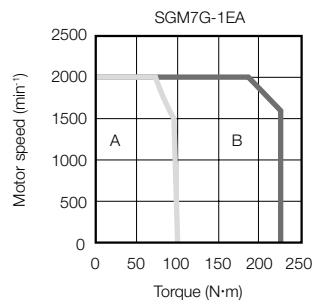

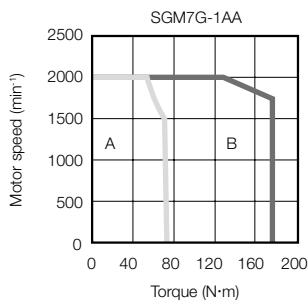

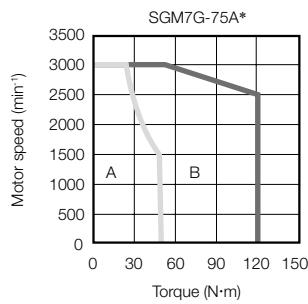

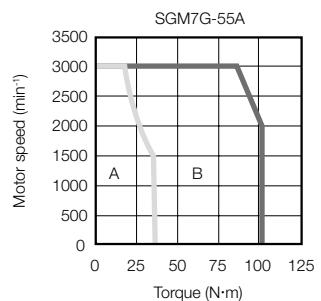

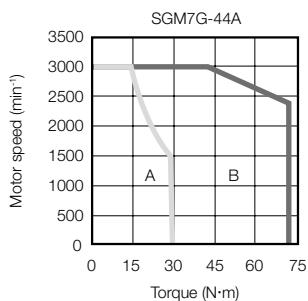

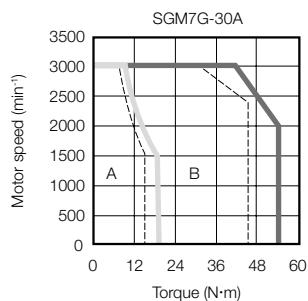

\*7. Design the mechanical system so that the thrust and radial loads applied to the Servomotor shaft end during operation do not exceed the values given in the table.

\*8. This is the value if you combine the SGM7G-30A with the SGD7S-200A.

## Torque-motor Speed Characteristics

A : Continuous duty zone    (solid lines): With three-phase 200-V input  
 B : Intermittent duty zone    (dotted lines): When combined with the SGD7S-200A

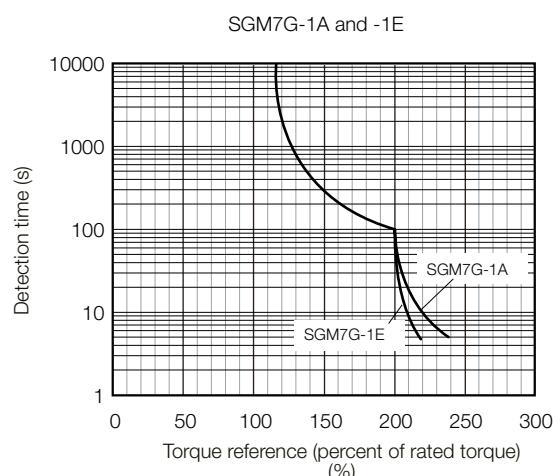

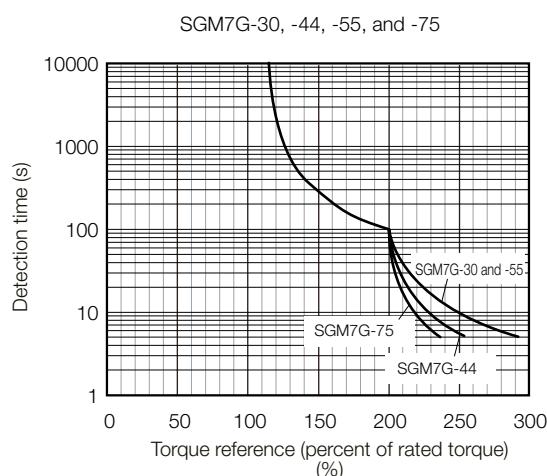

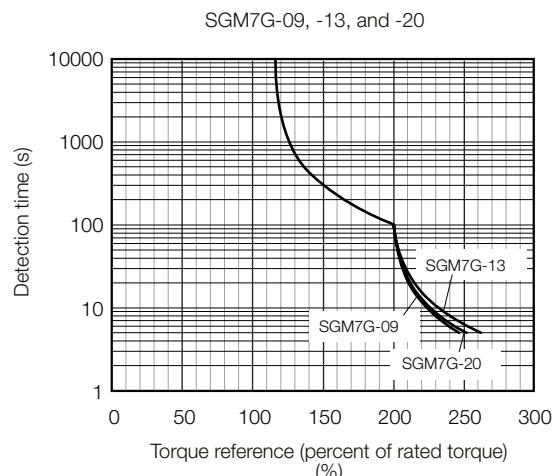

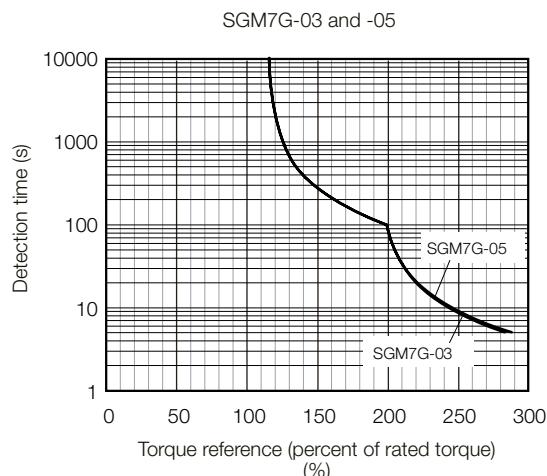

\* Use an SGM7G-75A Servomotor with a Holding Brake with an output torque of 14.4 Nm (30% of the rated torque) or lower when using the Servomotor in continuous operation at the maximum motor speed of 3,000 min<sup>-1</sup>.

Note:

- These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.
- The characteristics in the intermittent duty zone depend on the power supply voltage.
- If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
- If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

## Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40 °C.

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in Torque-Motor Speed Characteristics.

## Allowable Load Moment of Inertia

The allowable load moments of inertia (motor moment of inertia ratios) for the Servomotors are given in the Servomotor Ratings. The values are determined by the regenerative energy processing capacity of the SERVOPACK and are also affected by the drive conditions of the Servomotor. Perform the required Steps for each of the following cases.

Use the SigmaSize+ AC Servo Drive Capacity Selection Program to check the driving conditions. Contact your YASKAWA representative for information on this program.

### Exceeding the allowable Load Moment of Inertia

Use one of the following measures to adjust the load moment of inertia to within the allowable value.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.

If the above steps are not possible, install an external regenerative resistor.

**Information**

An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Refer to Built-In Regenerative Resistor for the regenerative power (W) that can be processed by the SERVOPACKs.

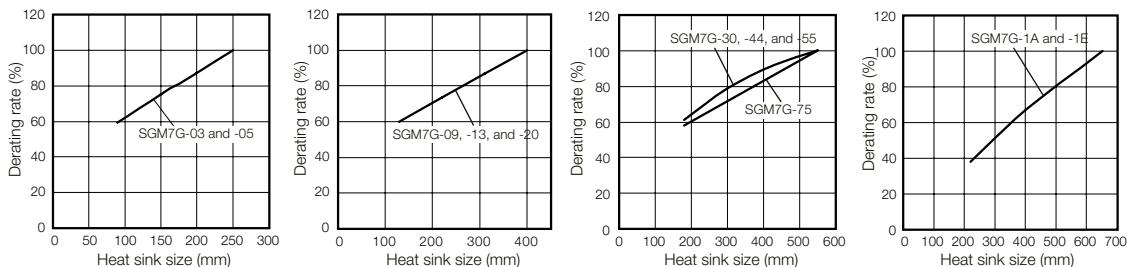

Install an External Regenerative Resistor when the built-in regenerative resistor cannot process all of the regenerative power.

### When an External Regenerative Resistor is required

Install the External Regenerative Resistor. Refer to the following section for the recommended products.

## Servomotor Heat Dissipation Conditions

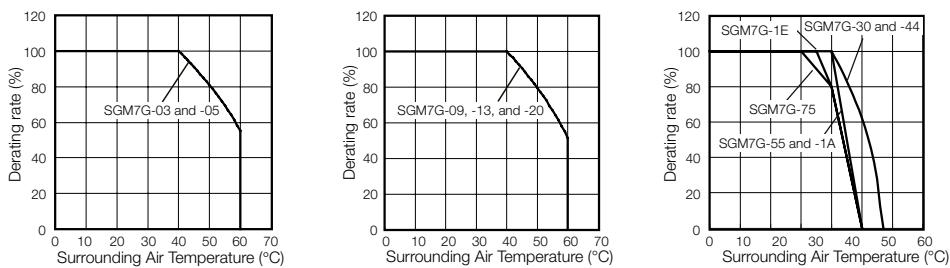

The Servomotor ratings are the continuous allowable values when a heat sink is installed on the Servomotor. If the Servomotor is mounted on a small device component, the Servomotor temperature may rise considerably because the surface for heat dissipation becomes smaller. Refer to the following graphs for the relation between the heat sink size and derating rate.

The actual temperature rise depends on how the heat sink (i.e., the Servomotor mounting section) is attached to the installation surface, what material is used for the Servomotor mounting section, and the motor speed. Always check the Servomotor temperature with the actual equipment.

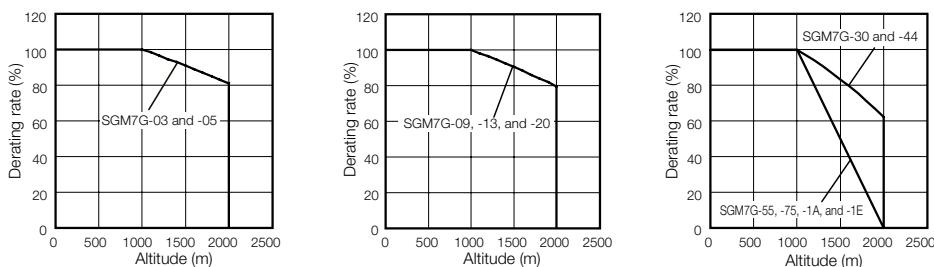

## Servomotor Derating Rates for surrounding Air Temperatures

Apply a suitable derating rate from the following graphs according to the surrounding air temperature of the Servomotor (60°C max.).

## Applications where the Altitude exceeds 1,000 m

The Servomotor ratings are the continuous allowable values at an altitude of 1,000 m or less. If you use a Servomotor at an altitude that exceeds 1,000 m (2,000 m max.), the heat dissipation effect of the air is reduced. Apply the appropriate derating rate from the following graphs.

### Information

When using Servomotors with derating, change the detection timing of overload warning and overload alarm based on the overload detection level of the motor given in Servomotor Overload Protection Characteristics.

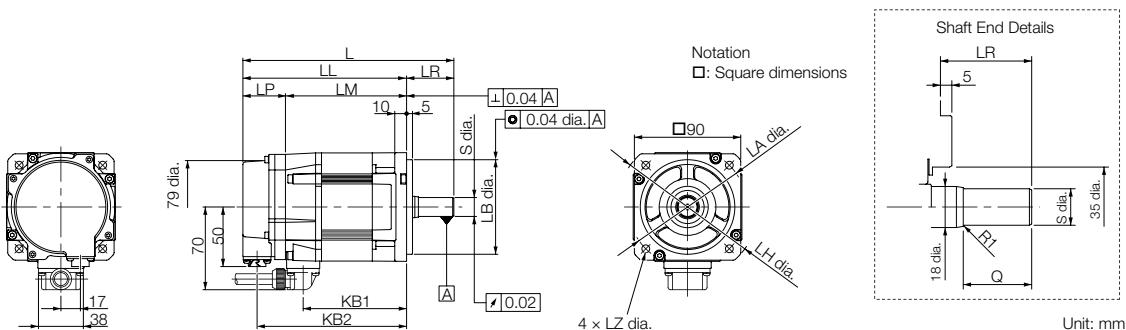

Notes:

1. Use the combination of the SERVOPACK and Servomotor so that the derating conditions are satisfied for both the SERVOPACK and Servomotor.
2. The derating rates are applicable only when the average motor speed is less than or equal to the rated motor speed. If the average motor speed exceeds the rated motor speed, consult with your YASKAWA representative.

## External Dimensions

### Servomotors without Holding Brakes

#### SGM7G-03 and -05

Model SGM7G-	L <sup>1</sup>	LL <sup>1</sup>	LM	LP <sup>1</sup>	LR	KB1	KB2 <sup>1</sup>	KL1	Flange Dimensions						Shaft End Dimensions		Approx. Mass [kg]

\*1. For models that have a batteryless absolute encoder, L, LL, LP, and KB2 are 8 mm greater than the given value. Refer to the following section for the values for individual models.

\*2. The L, LR, S, and Q dimensions of these Servomotors are different from those of the S-V-series SGMGV Servomotors.

Models that have the same installation dimensions as the SGMGV Servomotors are also available. Contact your YASKAWA representative for details.

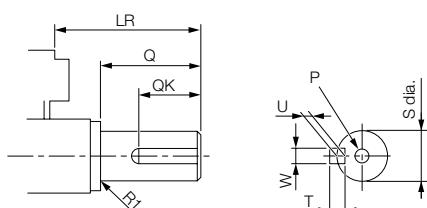

#### Notes:

1. The values in parentheses are for Servomotors with Holding Brakes.

2. The values for a straight, without key specification are given. Refer to the information given below for other shaft end specifications and option specifications.

## Shaft End Specifications

### Straight with Key and Tap

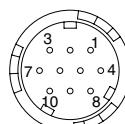

Model SGM7G-	LR	Q	QK	S	W	T	U	P
03A□A61	40 <sup>*</sup>	30 <sup>*</sup>	20 <sup>*</sup>	16 <sup>0</sup> <sub>-0.011</sub> <sup>*</sup>	5	5	3	M5 x 2L
05A□A61	40	30	20	16 <sup>0</sup> <sub>-0.013</sub>	5	5	3	

\* The shaft end dimensions of these Servomotors are different from those of the S-V-series SGMGV Servomotors.

Models that have the same installation dimensions as the SGMGV Servomotors are also available. Contact your YASKAWA representative for details.

## Connector Specifications

### Encoder Connector (24-bit Encoder)

\* A battery is required only for an absolute encoder.

Receptacle: CM10-R10P-D

Applicable plug: Not provided by Yaskawa.

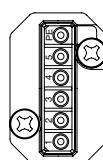

Plug: CM10-AP10S-□-D for Right-angle Plug

CM10-SP10S-□-D for Straight Plug

(□ depends on the applicable cable size.)

\*1. This is 0.04 for the SGM7G-55 or SGM7G-75.

\*2. For models that have a batteryless absolute encoder, L, LL, LP, and KB2 are 8 mm greater than the given value. Refer to the following section for the values for individual models.

\*3. The S dimensions of these Servomotors are different from those of the S-V-series SGMGV Servomotors.

Models that have the same installation dimensions as the SGMGV Servomotors are also available. Contact your YASKAWA representative for details.

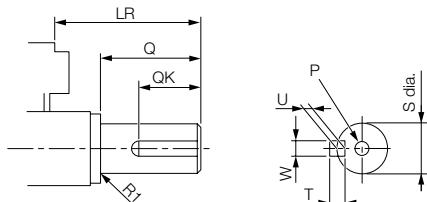

Notes:

1. The values in parentheses are for Servomotors with Holding Brakes.

2. The values for a straight, without key specification are given. Refer to the information given below for other shaft end specifications and option specifications.

## Shaft End Specifications

### Straight with Key and Tap

03A6A2C	207	167	44	155	3.6
05A6A2C	220	180	44	168	4.2
09A6A2C	239	181	44	169	7.5
13A6A2C	255	197	44	185	9.0
20A6A2C	273	215	44	203	11
30A6A2C	295	216	44	204	19.5
44A6A2C	319	240	44	228	23.5
55A6A2C	386	273	44	261	27.5
75A6A2C	432	319	44	307	35.0
1AA6A2C	506	390	44	378	65
1EA6A2C	606	490	44	478	85

## Selecting Cables SGM7G

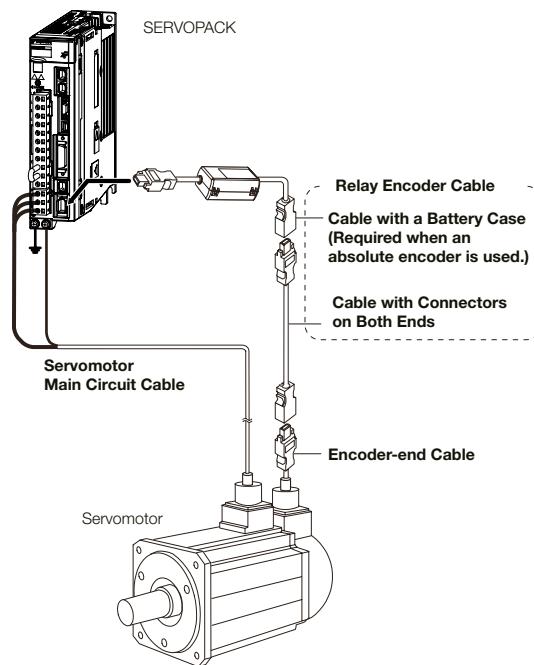

### Cable Configurations

The cables shown below are required to connect a Servomotor to a SERVOPACK.

#### Encoder Cable of 20 m or less

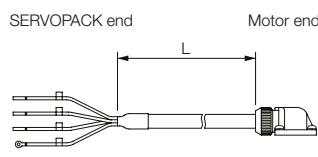

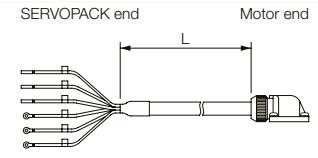

#### Encoder Cable of 30 m to 50 m (Relay Cable)

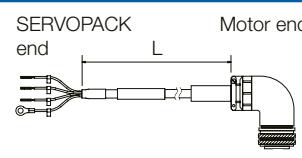

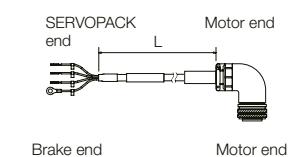

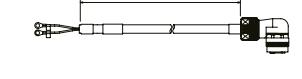

Note:

1. Cables with connectors on both ends that are compliant with an IP67 protective structure and European Safety Standards are not available from YASKAWA for the SGM7G Servomotors. You must make such a cable yourself. Use the Connectors specified by YASKAWA for these Servomotors. (These Connectors are compliant with the standards.) YASKAWA does not specify what wiring materials to use.
  2. If the Encoder Cable length exceeds 20 m, be sure to use a Relay Encoder Cable.
  3. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torquemotor speed characteristics will become smaller because the voltage drop increases.
  4. Refer to the following manual for the following information.
    - Cable dimensional drawings and cable connection specifications
    - Order numbers and specifications of individual connectors for cables
    - Order numbers and specifications for wiring materials
- Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

## Servomotor Main Circuit Cables

Servomotor Model	Description	Length	Order Number*	Appearance
SGM7G-03 and -05 300 W, 450 W	For Servomotors without Holding Brakes	3m	JZSP-CVM21-03-E-G#	
		5m	JZSP-CVM21-05-E-G#	
		10m	JZSP-CVM21-10-E-G#	
		15m	JZSP-CVM21-15-E-G#	
		20m	JZSP-CVM21-20-E-G#	
		30m	JZSP-CVM21-30-E-G#	
	For Servomotors with Holding Brakes	3m	JZSP-CVM41-03-E-G#	
		5m	JZSP-CVM41-05-E-G#	
		10m	JZSP-CVM41-10-E-G#	
		15m	JZSP-CVM41-15-E-G#	
		20m	JZSP-CVM41-20-E-G#	

\* Use Flexible Cables for moving parts of machines, such as robots. The recommended bending radius (R) is 90 mm or larger.

Servomotor Model	Description	Connector Specifications	Length	Order Number	Appearance
				Flexible Cable* <sup>1</sup>	
SGM7G-09 to -20 850 W, 1.8 kW	For Servomotors without Holding Brakes	Right-angle	3m	JZSP-CVMCA12-03-E-G#	
			5m	JZSP-CVMCA12-05-E-G#	
			10m	JZSP-CVMCA12-10-E-G#	
			15m	JZSP-CVMCA12-15-E-G#	
			20m	JZSP-CVMCA12-20-E-G#

\*1. Use Flexible Cables for moving parts of machines, such as robots. The recommended bending radius (R) is 90 mm or larger.

\*2. This order number is for a set of two cables (Main Power Supply Cable and Holding Brake Cable). When you purchase them separately, the order numbers for Main Power Supply Cables are the same as for a Servomotor without a Holding Brake.

The following order numbers are for a Holding Brake Cable. These Standard Cables are Flexible Cables.

- Cable with Straight Plug: JZSP-U7B23-□□-E
- Cable with Right-angle Plug: JZSP-U7B24-□□-E

Note: If you need a Cable with a length of 20m to 50m, consider the operating conditions and specify a suitable length.

# Rotary Servomotors SGM7G

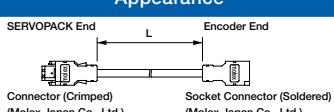

## Encoder Cables of 20 m or less

Servomotor Model	Description	Length	Flexible Cable*1		Appearance
			Flexible Cable*1		
All SGM7G Models	For incre-mental encoder, or battery-less absolute encoder	3m	JZSP-CVP12-03-E-G#	SERVOPACK end	Encoder end
		5m	JZSP-CVP12-05-E-G#		
		10m	JZSP-CVP12-10-E-G#		
		15m	JZSP-CVP12-15-E-G#		
		20m	JZSP-CVP12-20-E-G#		
	For absolute encoder: With Battery Case*2	3m	JZSP-CVP27-03-E-G#	SERVOPACK end	Encoder end
		5m	JZSP-CVP27-05-E-G#		
		10m	JZSP-CVP27-10-E-G#		
		15m	JZSP-CVP27-15-E-G#		
		20m	JZSP-CVP27-20-E-G#		

\*1. Use Flexible Cables for moving parts of machines, such as robots. The recommended bending radius (R) is 90 mm or larger.

\*2. If a battery is connected to the host controller, the Battery Case is not required. If so, use a cable for incremental encoders.

## Encoder Extension Cables of 30 m or above

Servomotor Model	Description	Length	Order Number	Appearance
All SGM7G models	Cable with Connectors (For incremental and absolute encoder)	30 m	JZSP-UCMP00-30-E	

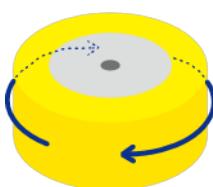

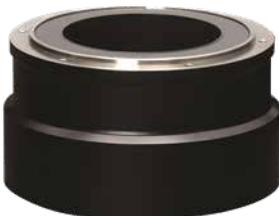

Note: Encoder Extension cables can only be used together with suitable Encoder Cables.

## Direct Drive Servomotors

SGM7D (Outer Rotor, with Core)	106
SGM7E (Inner Rotor, Coreless)	133
SGM7F (Inner Rotor, with Core)	148
SGMCS	170
SGMCV	191

# Product Overview

## SGM7D

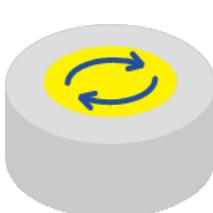

*Outer Rotor with Core*

Ideal for applications that require high torque, high precision and high rigidity.

- High inertia
- Built-in high-resolution (24-bit) encoder
- A high allowable load moment of inertia ratio enables application to large loads
- Large center aperture provides more space for wiring connections

## SGM7F

*Inner Rotor with Core*

Ideal for applications that require downsizing and a shorter takt time.

- Medium inertia
- Built-in high-resolution (24-bit) encoder
- Compact size with small rotor diameter
- Greater speed and torque stability enable high-speed, high-frequency positioning

## SGM7E

*Coreless, Inner Rotor*

Ideal for applications that require smooth movement without speed fluctuations.

- Low inertia
- Built-in high-resolution (24-bit) encoder
- Smooth operation without speed fluctuations achieved through coreless structure with low cogging

## Specifications

### SGM7D-□□F, -□□G and -□□H

Model SGM7D-	30F	58F	90F	1AF	01G	05G	08G	18G	24G	34G	45G	03H
Time Rating												Continuous
Thermal Class												F
Insulation Resistance												500 VDC, 10 MΩ min.
Withstand Voltage												1,500 VAC for 1 minute
Excitation												Three-phase
Mounting												Flange-mounted
Drive Method												Direct drive
Rotation Direction												Counterclockwise (CCW) for forward run reference when viewed from the load side
Absolute Accuracy												±15 s
Repeatability												±1.3 s
Protective Structure*1				Totally enclosed, self-cooled, IP20		Totally enclosed, self-cooled, IP30			Totally enclosed, self-cooled, IP20			Totally enclosed, self-cooled, IP30
Ambient Air Temperature												0°C to 40°C (without freezing)
Ambient Air Humidity												20% to 80% relative humidity (without condensation)
Environmental Conditions	Installation Site											<ul style="list-style-type: none"> <li>• Must be indoors and free of corrosive and explosive gases.</li> <li>• Must be well-ventilated and free of dust and moisture.</li> <li>• Must facilitate inspection and cleaning.</li> <li>• Must have an altitude of 1,000 m or less.</li> <li>• Must be free of strong magnetic fields.</li> </ul>
	Storage Environment											<p>Store the Servomotor in the following environment if you store it with the power cable disconnected.</p> <p>Storage Temperature: -20°C to 60°C (without freezing)</p> <p>Storage Humidity: 20% to 80% relative humidity (without condensation)</p>

\*1. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with an aluminum or steel heat sink of the dimensions given in the table.

\*2. The rated intermittent torque is the value for 60% ED.

\*3. To externally connect dynamic brake resistance, select hardware option specification 020 for the SERVOPACK.

However, you cannot externally connect dynamic brake resistance if you use the following SERVOPACKs (maximum applicable motor capacity: 400 W).

- SGD7S-2R8□□□A020F82□
- SGD7S-2R8□00A020F83□

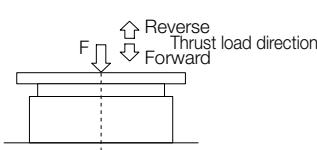

\*4. If you use an SGD7S-120A008 SERVOPACK and SGM7D Servomotor together, use the ratios given on the bottom line.

\*5. The thrust loads and moment loads that are applied while a Servomotor is operating are roughly classified into the following patterns.

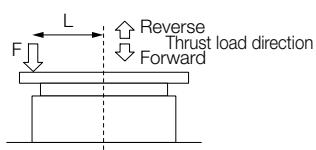

Design the machine so that the thrust loads or moment loads will not exceed the values given in the table. The allowable load is for a static load in one direction.

When designing the system, multiply the allowable load by the following safety coefficient depending on the type of load.

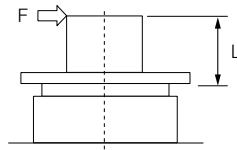

- Smooth load with no shock: 1/3
- Light repetitive load: 1/5
- Shock load: 1/10

Where F is the external force,  
Thrust load = F + Load mass  
Moment load = 0

Where F is the external force,  
Thrust load = F + Load mass  
Moment load = F × L

Where F is the external force,  
Thrust load = Load mass  
Moment load = F × L

Note:

1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.

2. For the bearings used in these Servomotors, the loss depends on the bearing temperature. The amount of heat loss is higher at low temperatures.

Rigidities	Thrust Displacement Rigidity	Forward	mm/N		4 x 10 <sup>-6</sup>		—
		Reverse	mm/N		8 x 10 <sup>-6</sup>		—
		Moment Displacement Rigidity	rad/Nm		8 x 10 <sup>-6</sup>		—

\*1. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with an aluminum or steel heat sink of the dimensions given in the table.

\*2. The rated intermittent torque is the value for 60% ED.

\*3. To externally connect dynamic brake resistance, select hardware option specification 020 for the SERVOPACK.

However, you cannot externally connect dynamic brake resistance if you use the following SERVOPACKs (maximum applicable motor capacity: 400 W).

- SGD7S-2R8□□□A020F82□
- SGD7S-2R8□00A020F83□

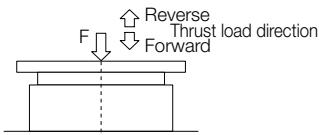

\*4. If you use an SGD7S-120A008 SERVOPACK and SGM7D Servomotor together, use the ratios given on the bottom line.

\*5. The thrust loads and moment loads that are applied while a Servomotor is operating are roughly classified into the following patterns.

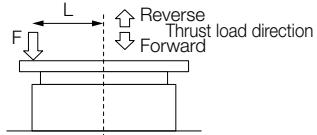

Design the machine so that the thrust loads or moment loads will not exceed the values given in the table. The allowable load is for a static load in one direction.

When designing the system, multiply the allowable load by the following safety coefficient depending on the type of load.

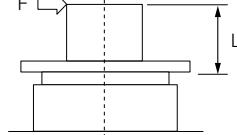

- Smooth load with no shock: 1/3
- Light repetitive load: 1/5
- Shock load: 1/10

Where F is the external force,  
Thrust load = F + Load mass  
Moment load = 0

Where F is the external force,  
Thrust load = F + Load mass  
Moment load = 0

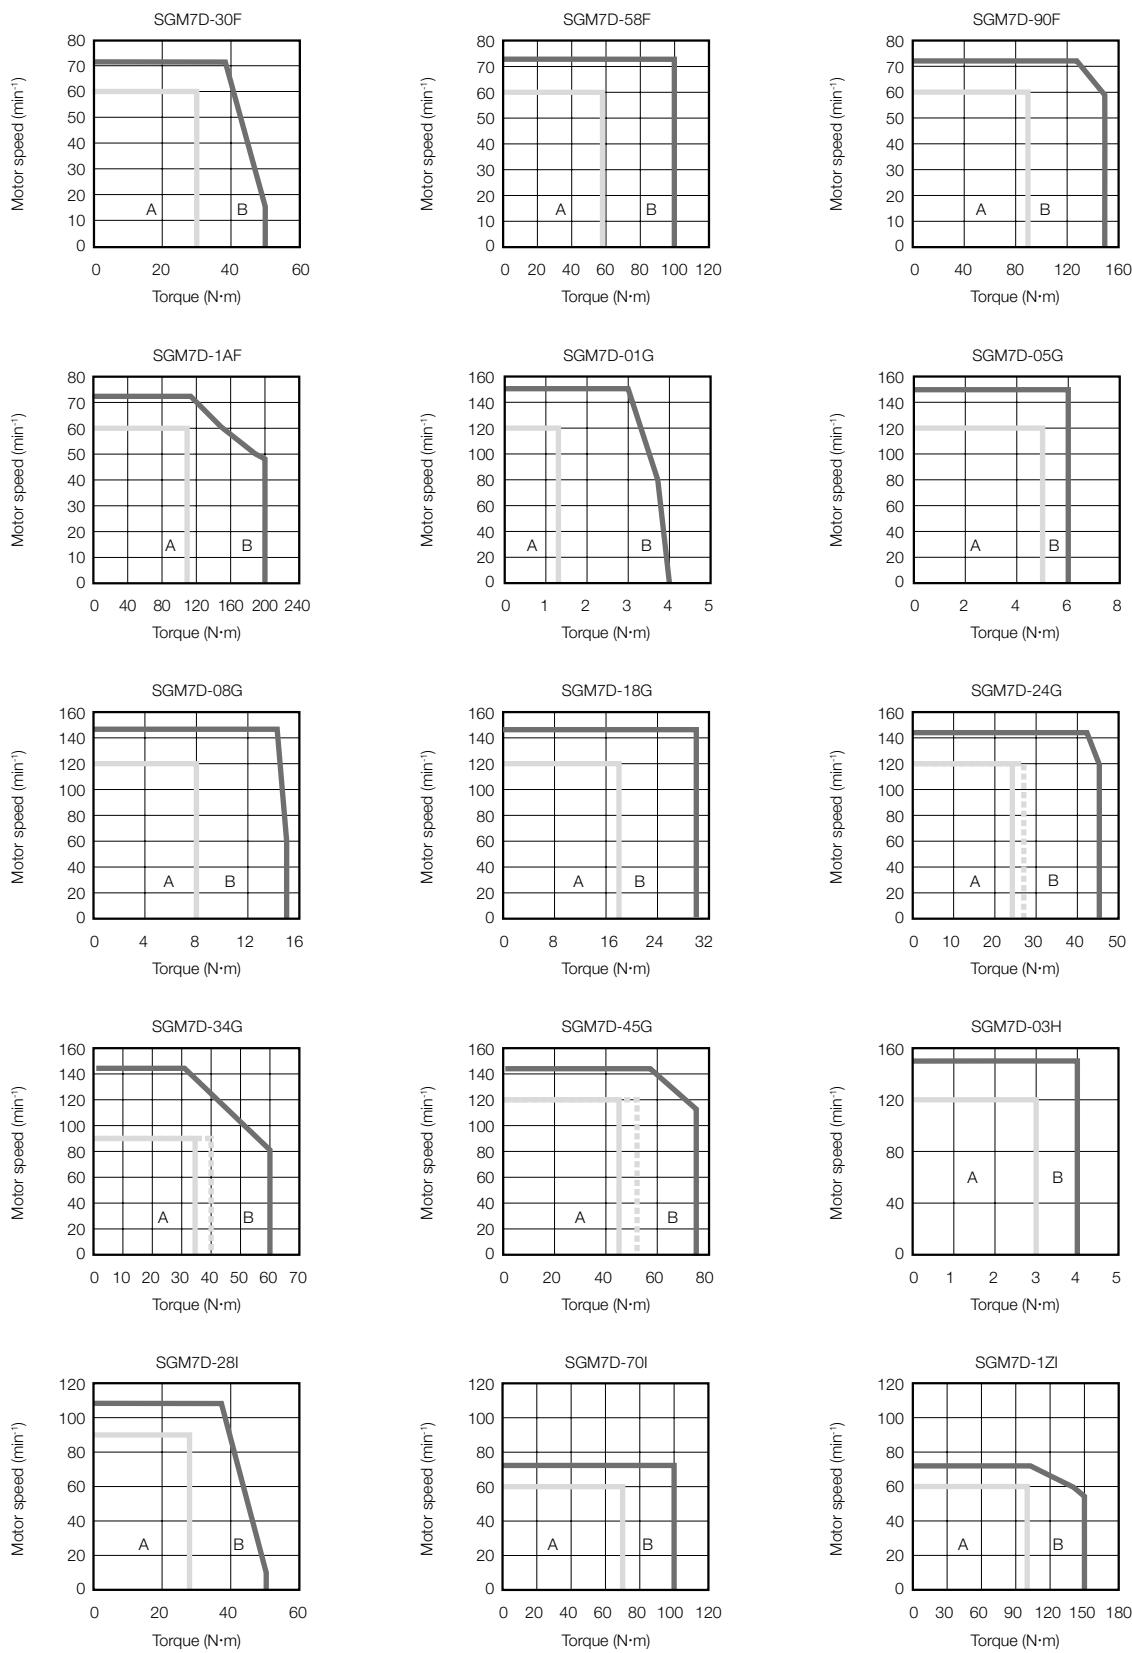

Where F is the external force,  
Thrust load = Load mass  
Moment load = F × L

Note:

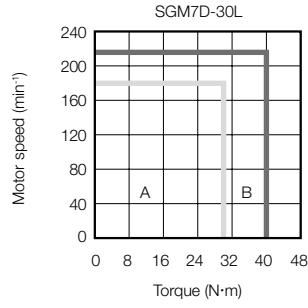

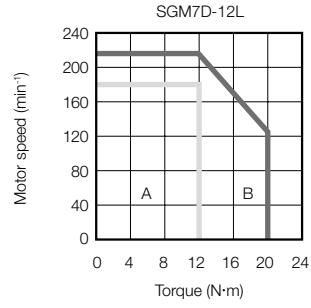

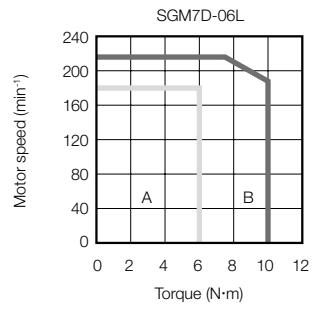

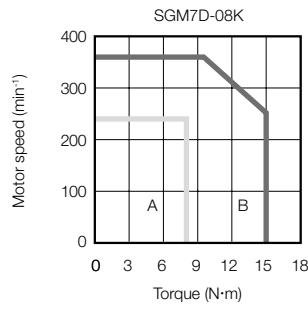

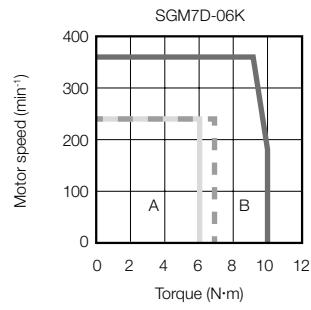

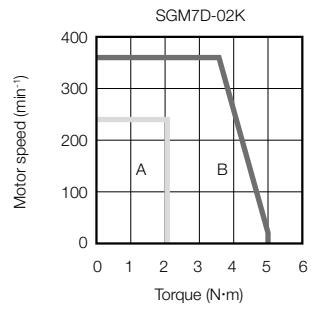

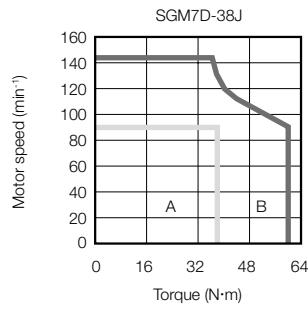

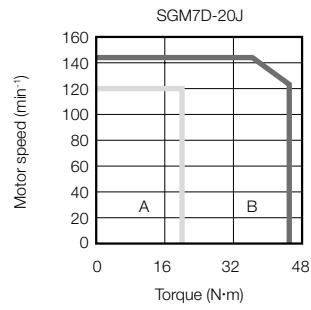

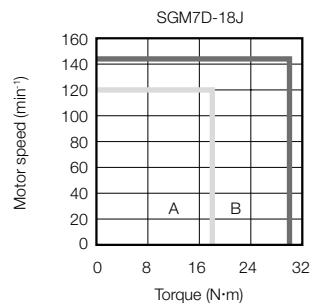

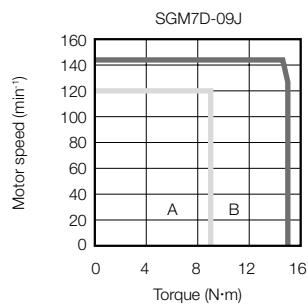

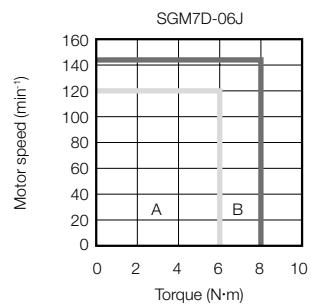

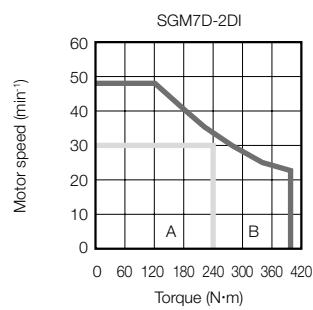

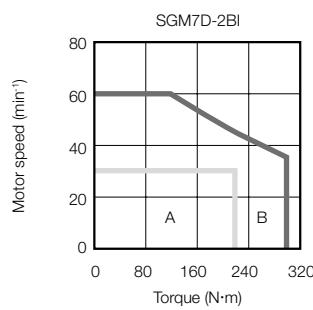

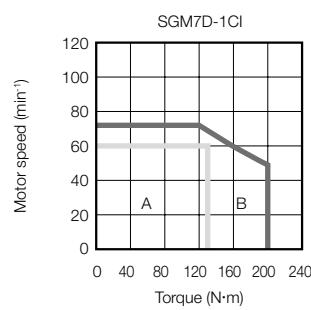

1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.
2. For the bearings used in these Servomotors, the loss depends on the bearing temperature. The amount of heat loss is higher at low temperatures.

## Torque-Motor Speed Characteristics

[A] : Continuous duty zone    (dotted lines): With 60%ED 10 min. duty factor  
 [B] : Intermittent duty zone\*    (solid lines): With three-phase 200-V, single-phase 230-V, and single-phase 200-V input

Direct Drive Servomotors SGM7D

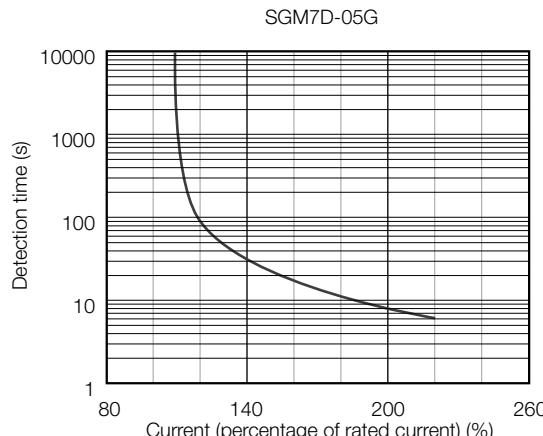

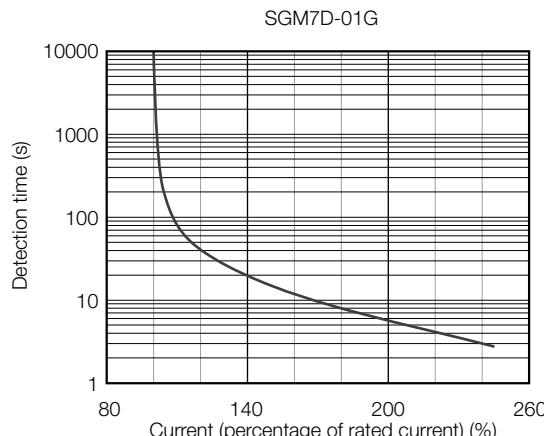

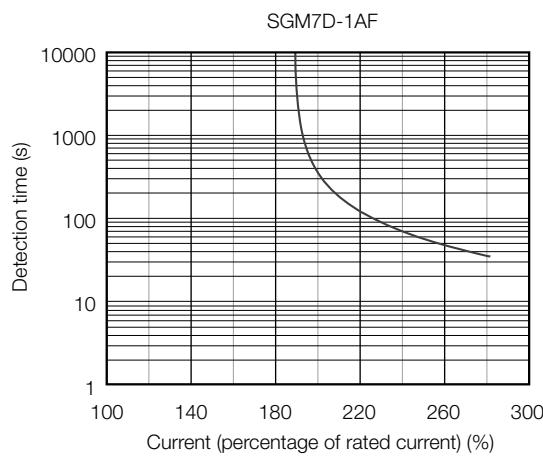

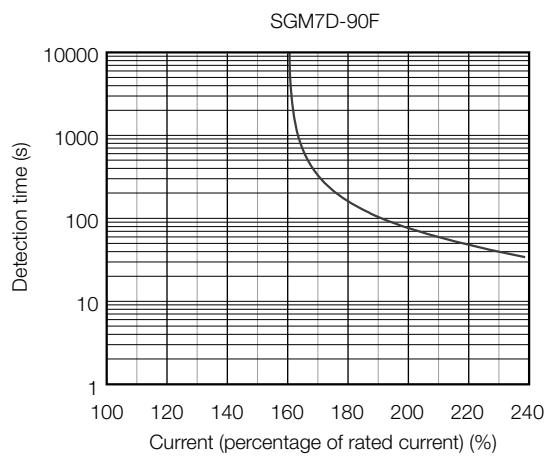

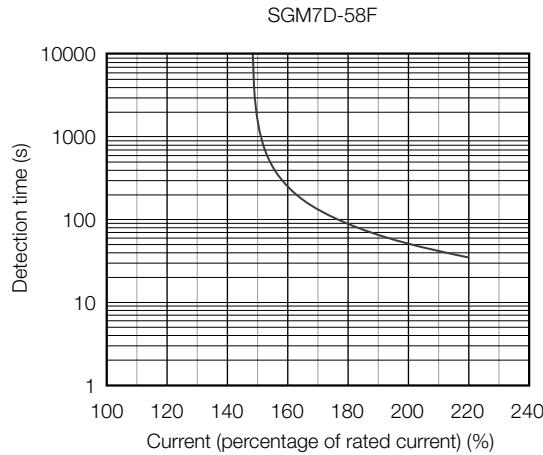

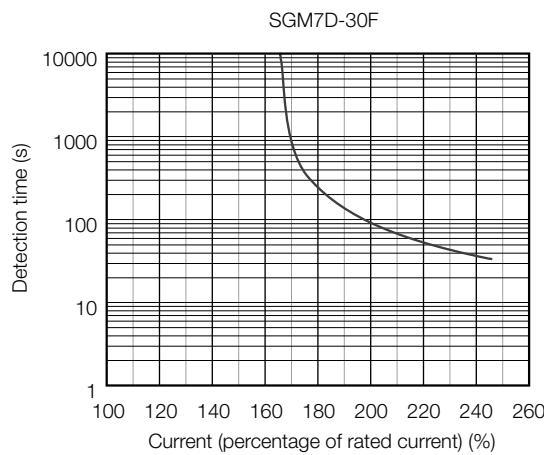

The characteristics are the same for three-phase 200 V and single-phase 200 V input.  
Contact your YASKAWA representative for information on the characteristics for single-phase 100 V input.

Note:

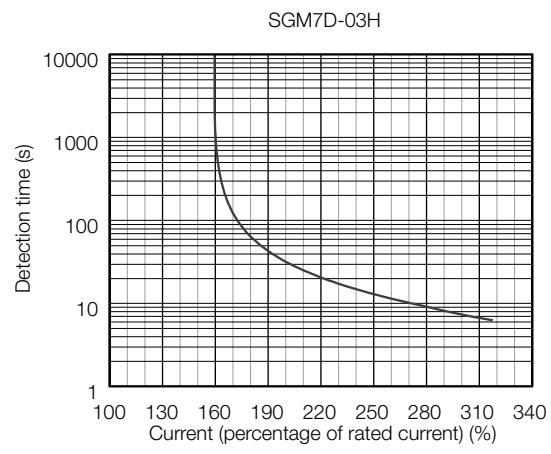

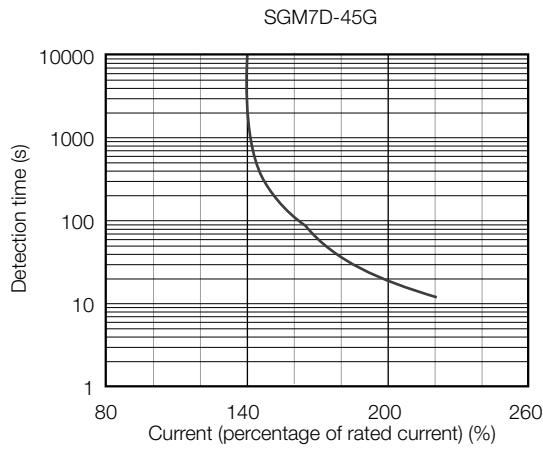

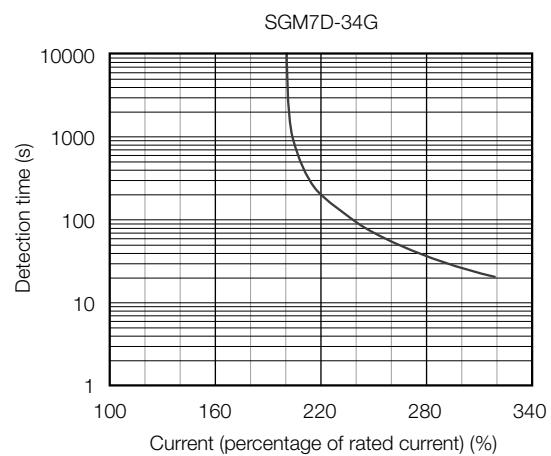

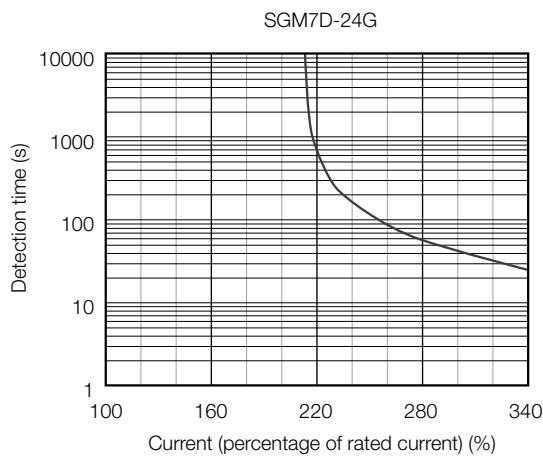

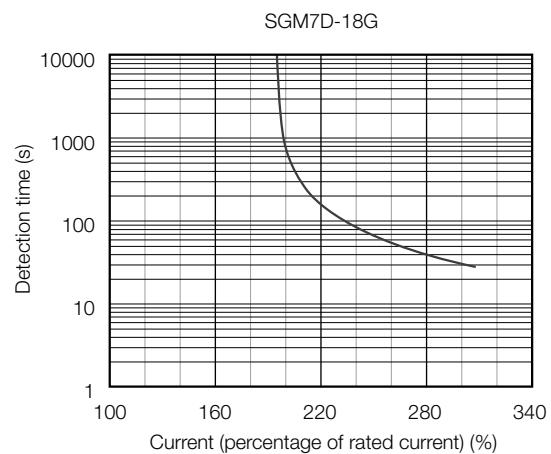

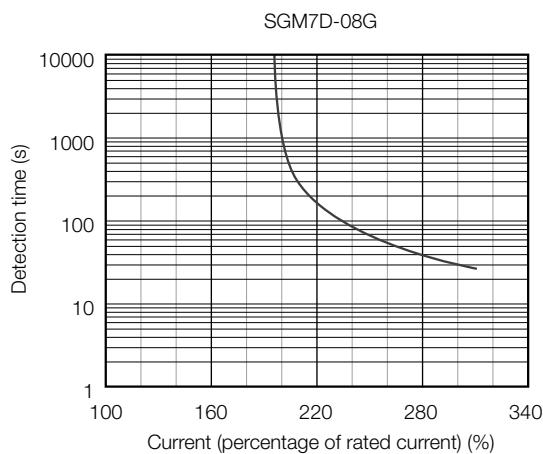

1. These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C.
  2. The characteristics in the intermittent duty zone depend on the power supply voltage.
  3. If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
  4. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torquemotor speed characteristics will become smaller because the voltage drop increases.

## Servomotor Overload Protection Characteristics

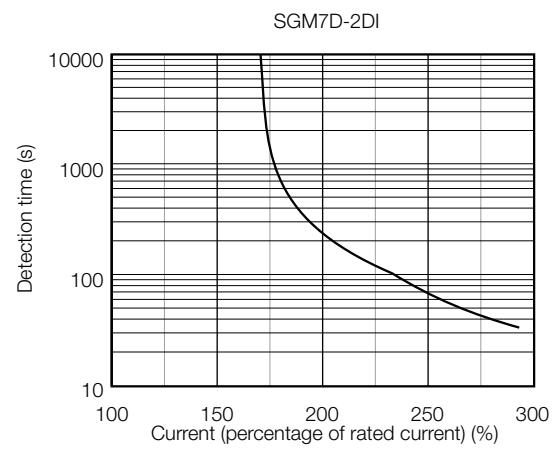

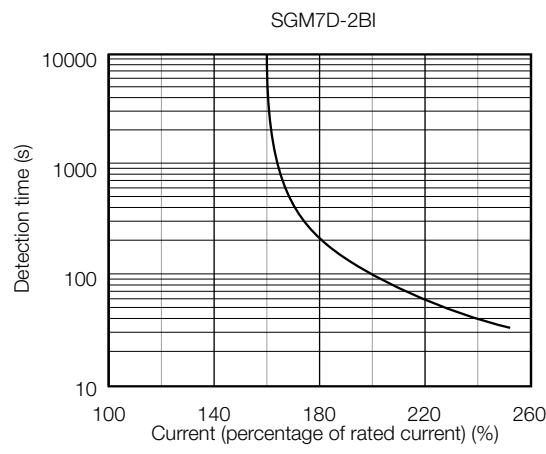

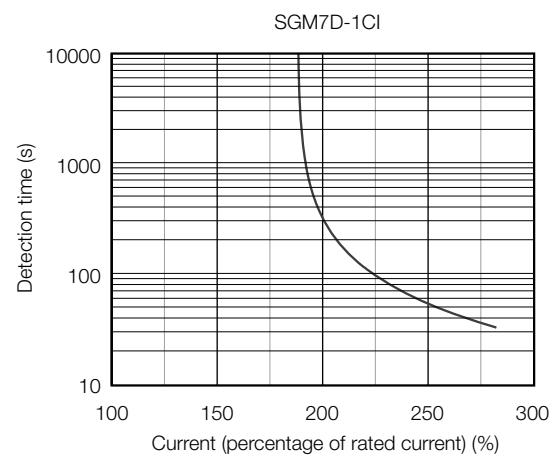

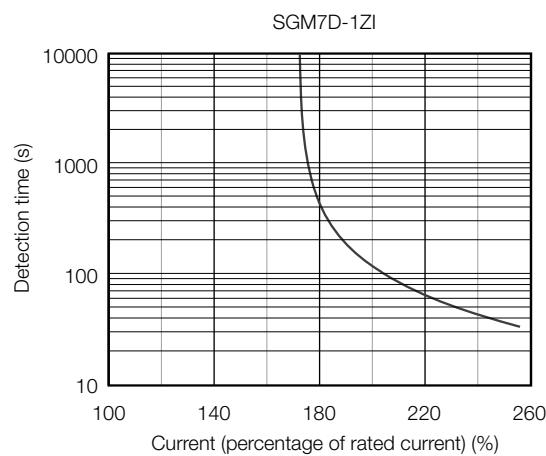

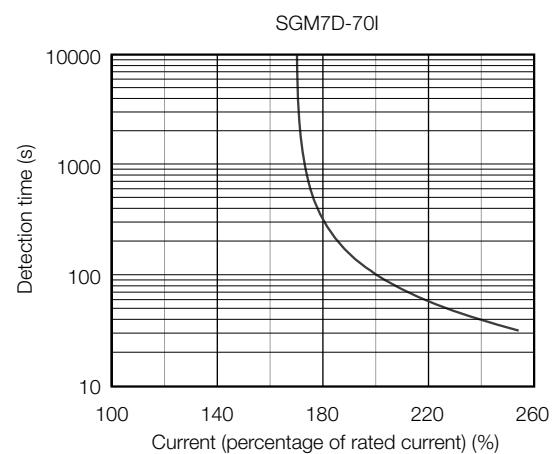

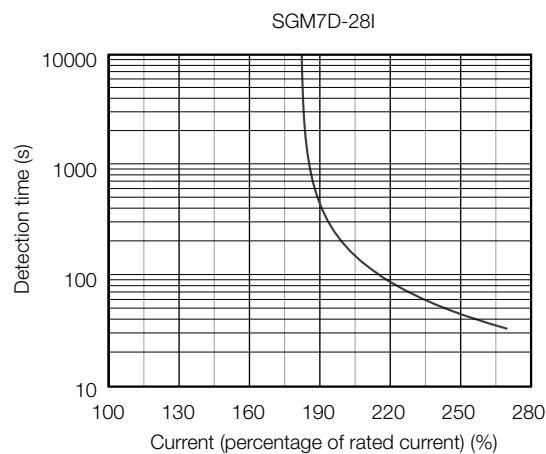

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40°C.

Appendix

## Direct Drive Servomotors SGM7D

# Direct Drive Servomotors SGM7D

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective force remains within the continuous duty zone. Refer to the section „Torque-Motor Speed Characteristics“ for details on the effective torque.

## Allowable Load Moment of Inertia

The allowable load moments of inertia (motor moment of inertia ratios) for the Servomotors are given in the Ratings section. The values are determined by the regenerative energy processing capacity of the SERVOPACK and are also affected by the drive conditions of the Servomotor. Perform the required steps for each of the following cases.

Use the SigmaSize+ AC Servo Drive Capacity Selection Program to check the driving conditions. Contact your YASKAWA representative for information on this program.

### Exceeding the allowable Load Moment of Inertia

Use one of the following measures to adjust the load moment of inertia to within the allowable value.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.

If the above steps are not possible, install an external regenerative resistor.

#### Information

An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Refer to "Built-In Regenerative Resistor" for the regenerative power (W) that can be processed by the SERVOPACKs. Install an External Regenerative Resistor when the built-in regenerative resistor cannot process all of the regenerative power.

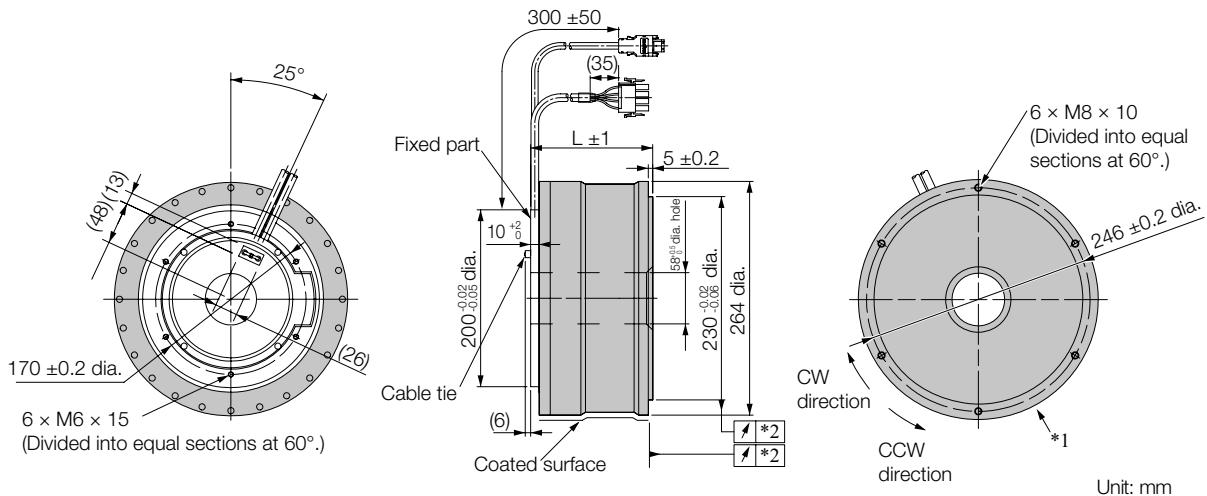

### When an external Regenerative Resistor is required

Install the External Regenerative Resistor. Refer to the „External Regenerative Resistors“ section for the recommended products.

 Mating Connector  
 • Cap: 350780-1  
 • Socket: 350570-3 or 350689-3

## Selecting Cables SGM7D

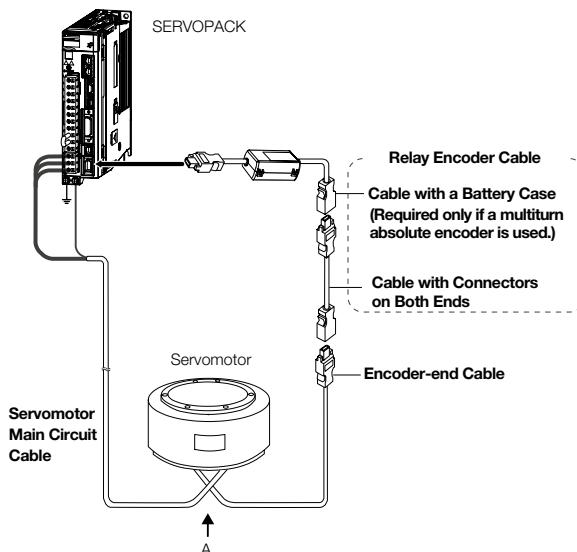

### Cable Configurations

The cables shown below are required to connect a Servomotor to a SERVOPACK.

#### Encoder Cable of 20 m or less

#### Encoder Cable of 30 m to 50 m (Relay Cable)

Note:

- If the Encoder Cable length exceeds 20 m, be sure to use a Relay Encoder Cable.
- If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque motor speed characteristics will become smaller because the voltage drop increases.
- Refer to the following manual for the following information.
  - Cable dimensional drawings and cable connection specifications
  - Order numbers and specifications of individual connectors for cables
  - Order numbers and specifications for wiring materials: Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

## Servomotor Main Circuit Cables

## Specifications

Model SGM7E-	02B	05B	07B	04C	10C	14C	08D	17D	25D	16E	35E
Time Rating										Continuous	
Thermal Class										A	
Insulation Resistance										500 VDC, 10 MΩ min.	
Withstand Voltage										1,500 VAC for 1 minute	
Excitation										Permanent magnet	
Mounting										Flange-mounted	
Drive Method										Direct drive	
Rotation Direction										Counterclockwise (CCW) for forward run reference when viewed from the load side	
Vibration Class <sup>*1</sup>										V15	
Absolute Accuracy										±15 s	
Repeatability										±1.3 s	
Protective Structure <sup>*2</sup>										Totally enclosed, self-cooled, IP42 (The protective structure is IP40 for CE marking)	
Environmental Conditions	Ambient Air Temperature									0°C to 40°C (without freezing)	
	Ambient Air Humidity									20% to 80% relative humidity (without condensation)	
	Installation Site									· Must be indoors and free of corrosive and explosive gases. · Must be well-ventilated and free of dust and moisture. · Must facilitate inspection and cleaning. · Must have an altitude of 1,000 m or less. · Must be free of strong magnetic fields.	
	Storage Environment									Store the Servomotor in the following environment if you store it with the power cable disconnected. Storage Temperature: -20°C to 60°C (without freezing) Storage Humidity: 20% to 80% relative humidity (without condensation)	
Mechanical Tolerances <sup>*3</sup>	Runout of Output Shaft Surface	mm								0.02 (0.01 for high machine precision option)	
	Runout at End of Output Shaft	mm								0.04 (0.01 for high machine precision option)	
	Parallelism between Mounting Surface and Output Shaft Surface	mm								0.07	0.08
	Concentricity between Output Shaft and Flange Outer Diameter	mm								0.07	0.08
Shock Resistance <sup>*4</sup>	Impact Acceleration Rate at Flange									490 m/s <sup>2</sup>	
	Number of Impacts									2 times	
Vibration Resistance <sup>*4</sup>	Vibration Acceleration Rate of Flange									49 m/s <sup>2</sup>	
	Applicable SERVOPACKs	SGD7S-	2R8A, 2R1F							2R8A, 2R8F	5R5A
		SGD7W-, SGD7C-									

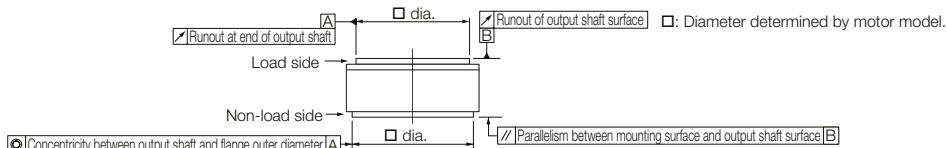

\*1. A vibration class of V15 indicates a vibration amplitude of 15 µm maximum on the Servomotor without a load at the rated motor speed.

\*2. The hollow hole section, motor mounting surface, output shaft surface, and gap around the rotating part of the shaft are excluded.

Protective structure specifications apply only when the special cable is used.

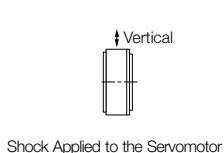

\*3. Refer to the following figure for the relevant locations on the Servomotor.

Refer to the dimensional drawings of the individual Servomotors for more information on tolerances.

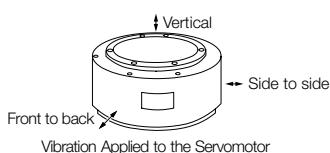

\*4. The given values are for when the Servomotor shaft is mounted horizontally and shock or vibration is applied in the directions shown in the following figures.

The strength of the vibration that the Servomotor can withstand depends on the application. Check the vibration acceleration rate.

Shock Applied to the Servomotor

Vibration Applied to the Servomotor

## Ratings

Model SGM7E-		02B	05B	07B	04C	10C	14C	08D	17D	25D	16E	35E
Rated Output <sup>*1</sup>	W	42	105	147	84	209	293	168	356	393	335	550
Rated Torque <sup>*1,*2</sup>	Nm	2	5	7	4	10	14	8	17	25	16	35
Instantaneous Maximum Torque <sup>*1</sup>	Nm	6	15	21	12	30	42	24	51	75	48	105
Stall Torque <sup>*1</sup>	Nm	2.05	5.15	7.32	4.09	10.1	14.2	8.23	17.4	25.4	16.5	35.6
Rated Current <sup>*1</sup>	A	1.8	1.7	1.4		2.2		2.8	1.9	2.5	2.6	3.3
Instantaneous Maximum Current <sup>*1</sup>	A	5.4	5.1	4.1		7		8.3	5.6	7.5	8	9.4
Rated Motor Speed <sup>*1</sup>	min <sup>-1</sup>					200				150	200	150
Maximum Motor Speed <sup>*1</sup>	min <sup>-1</sup>			500		400	300	500	350	250	500	250
Torque Constant	Nm/A	1.18	3.17	5.44	2.04	5.05	5.39	5.10	7.79	10.8	5.58	11.1
Motor Moment of Inertia	×10 <sup>-4</sup> kg·m <sup>2</sup>	28	51		77	140	220	285	510	750	930	1,430
Rated Power Rate <sup>*1</sup>	kW/s	1.43	4.90	6.36	2.08	7.14	8.91	2.25	5.67	8.33	2.75	8.57
Rated Angular Acceleration Rate <sup>*1</sup>	rad/s <sup>2</sup>	710	980	910	520	710	640	280	330		170	240
Heat Sink Size	mm	350	350	12		450	450	12		550	550	12

	With External Regenerative Resistor and External Dynamic Brake Resistor <sup>*3</sup>	times		10 times		5 times			3 times			
Allowable Load <sup>*4</sup>	Allowable Thrust Load	N		1,500		3,300		4,000		11,000		
	Allowable Moment Load	Nm	40	50	64	70	75	90	93	103	135	250
												320

\*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.

The values for other items are at 20°C. These are typical values.

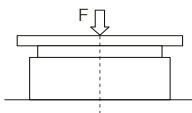

\*2. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with a steel heat sink of the dimensions given in the table.

\*3. To externally connect dynamic brake resistor, select hardware option specification 020 for the SERVOPACK. However, you cannot externally connect dynamic brake resistor if you use the following SERVOPACKs (maximum applicable motor capacity: 400 W).

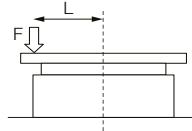

- SGD7S-R70□□□A020 to -2R8□□□A020
- SGD7W-1R6A20A020 to -2R8A20A020
- SGD7C-1R6AMAA020 to -2R8AMAA020

\*4. The thrust loads and moment loads that are applied while a Servomotor is operating are roughly classified into the following patterns.

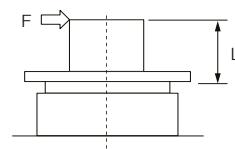

Design the machine so that the thrust loads or moment loads will not exceed the values given in the table.

Where F is the external force,  
Thrust load = F + Load mass  
Moment load = 0

Where F is the external force,  
Thrust load = F + Load mass  
Moment load = F × L

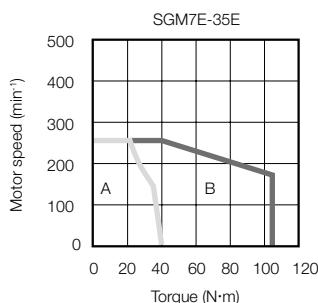

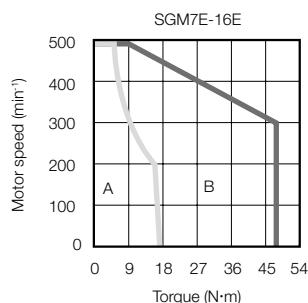

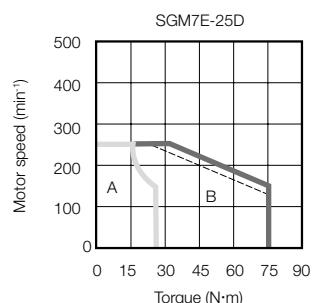

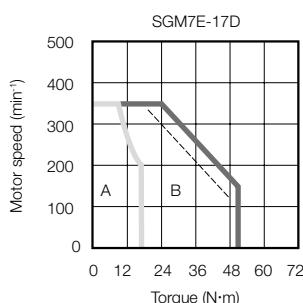

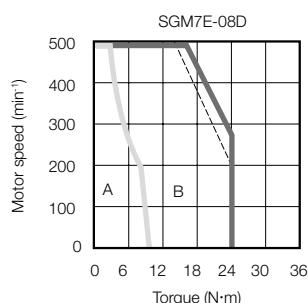

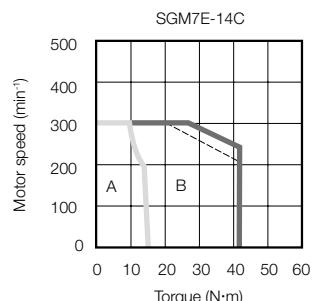

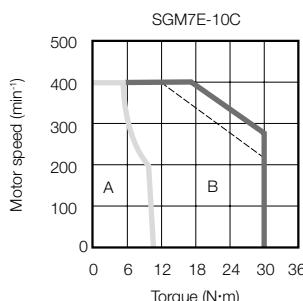

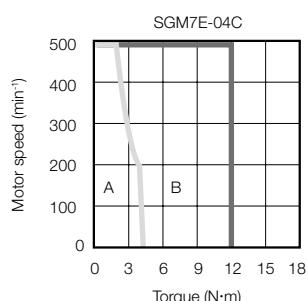

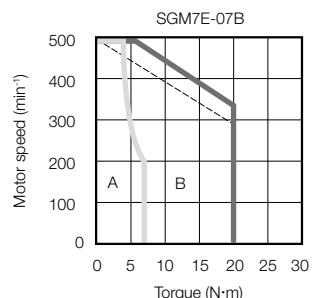

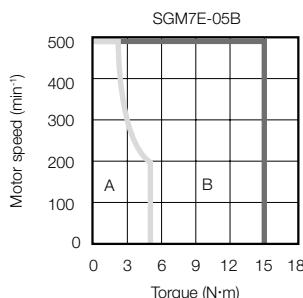

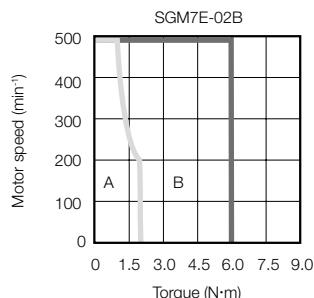

Where F is the external force,  
Thrust load = Load mass  
Moment load = F × L

Note:

For the bearings used in these Servomotors, the loss depends on the bearing temperature. The amount of heat loss is higher at low temperatures.

## Torque-Motor Speed Characteristics

A : Continuous duty zone (solid lines): With three-phase 200-V input  
 B : Intermittent duty zone (dotted lines): With single-phase 100-V input

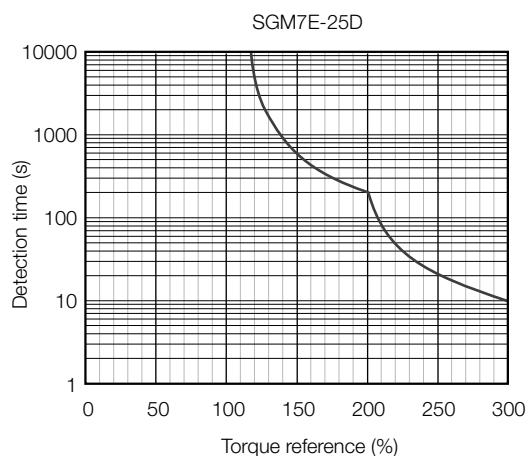

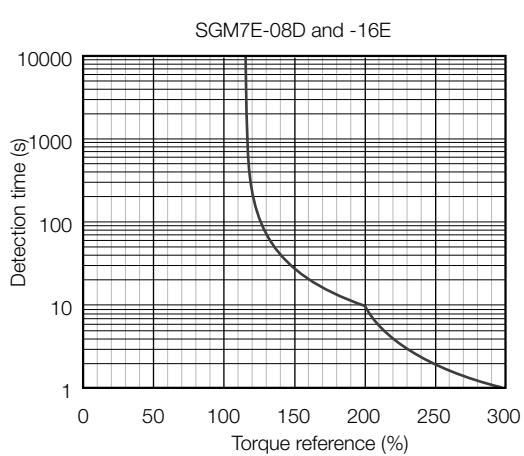

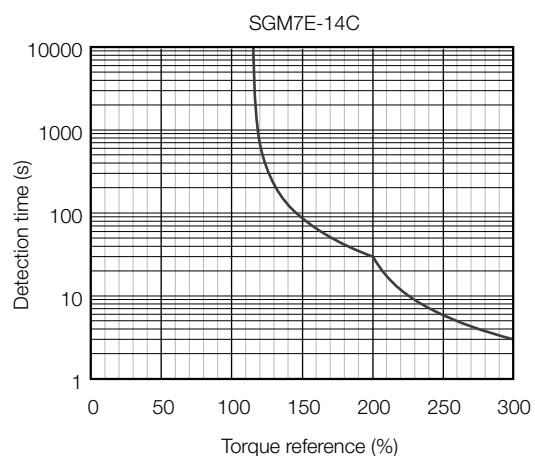

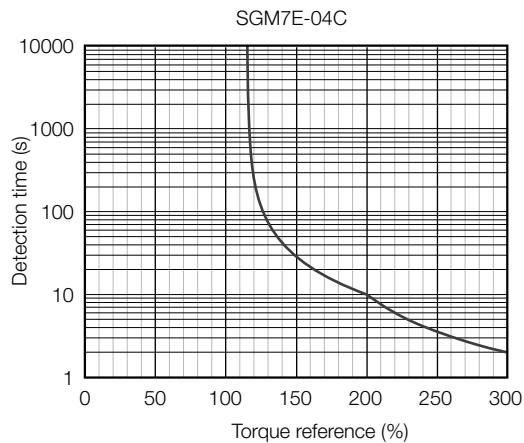

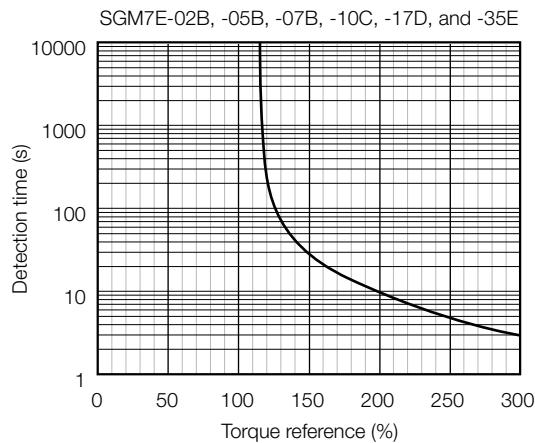

Note:

- These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.
- The characteristics in the intermittent duty zone depend on the power supply voltage.
- If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
- If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torquemotor speed characteristics will become smaller because the voltage drop increases.

## Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40°C.

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in Torque-Motor Speed Characteristics.

## Allowable Load Moment of Inertia

The allowable load moments of inertia (motor moment of inertia ratios) for the Servomotors are given in the Ratings. The values are determined by the regenerative energy processing capacity of the SERVOPACK and are also affected by the drive conditions of the Servomotor. Perform the required Steps for each of the following cases.

Use the SigmaSize+ AC Servo Drive Capacity Selection Program to check the driving conditions.  
Contact your YASKAWA representative for information on this program.

### Exceeding the Allowable Load Moment of Inertia

Use one of the following measures to adjust the load moment of inertia to within the allowable value.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.

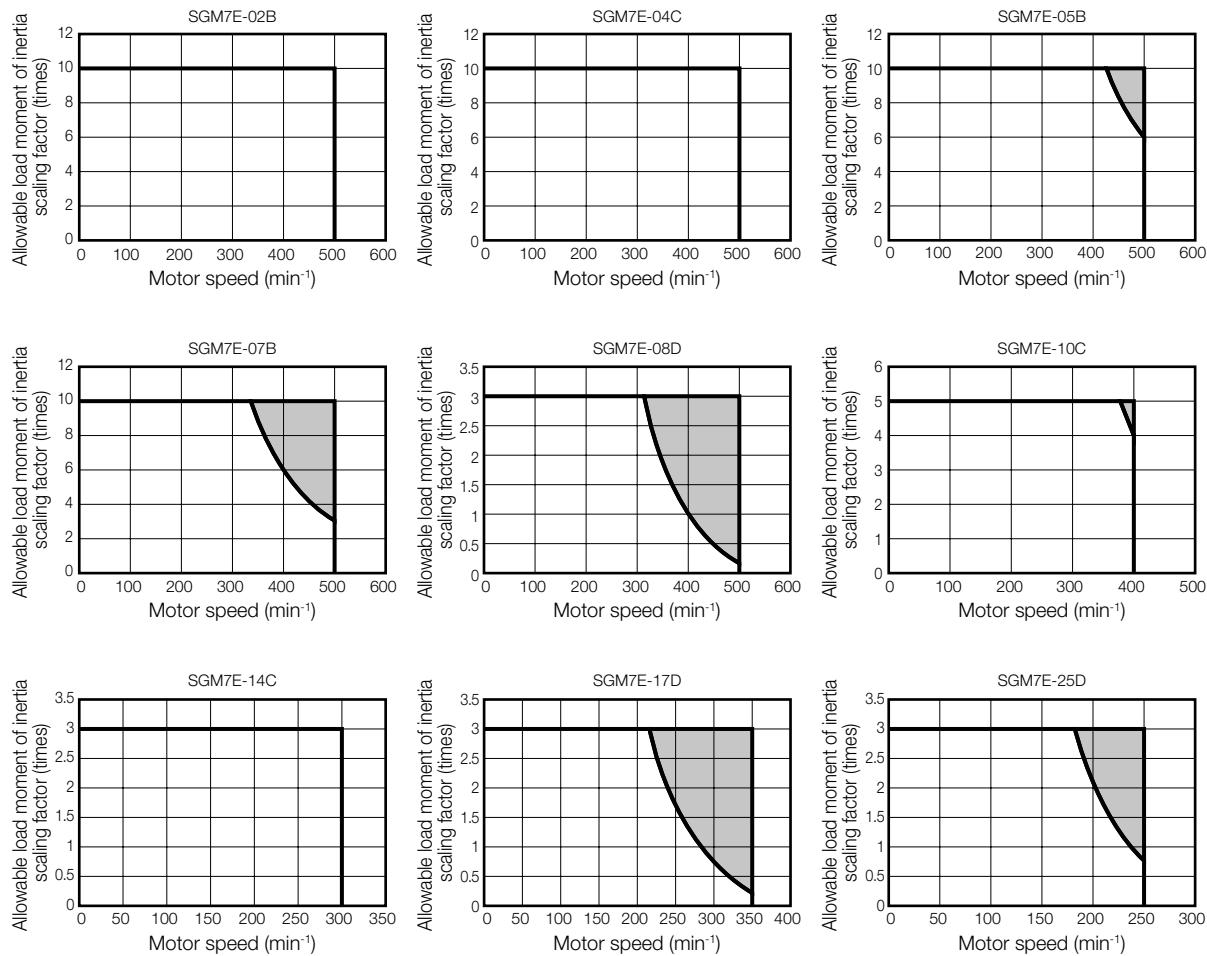

If the above steps are not possible, install an external regenerative resistor.

#### Information

An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Refer to "Built-In Regenerative Resistor" for the regenerative power (W) that can be processed by the SERVOPACKs. Install an External Regenerative Resistor when the built-in regenerative resistor cannot process all of the regenerative power.

## SERVOPACKs without built-in Regenerative Resistors

The following graph shows the allowable load moment of inertia scaling factor of the motor speed (reference values for deceleration operation at or above the rated torque). Application is possible without an external regenerative resistor within the allowable value. However, an External Regenerative Resistor is required in the shaded areas of the graphs.

Note

Applicable SERVOPACK models: SGD7S-2R8A and -2R8F

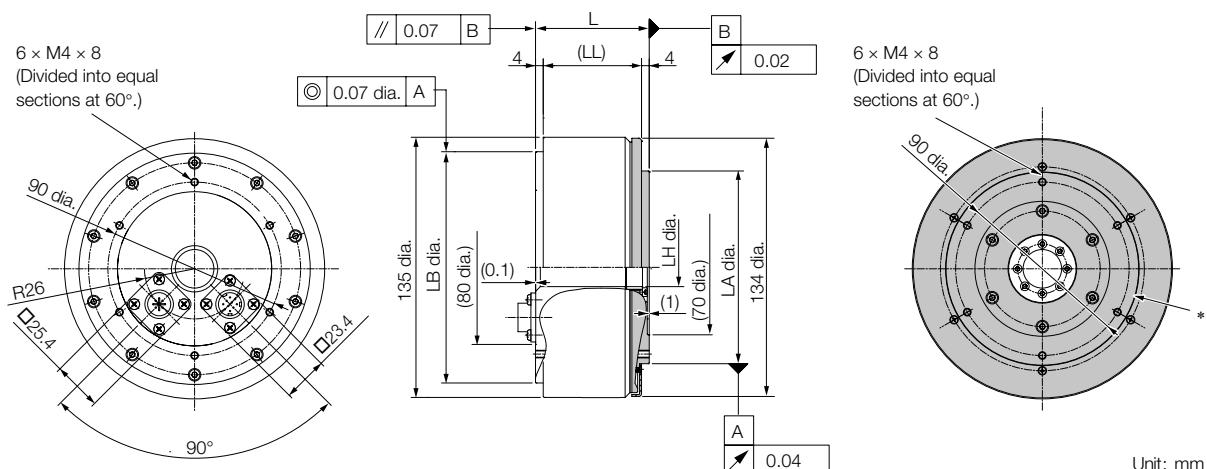

## When an external Regenerative Resistor is required

Install the External Regenerative Resistor. Refer to the External Regenerative Resistor section for the recommended products.

## Connector Specifications SGM7E

### Flange Specification 1

#### Servomotor Connector

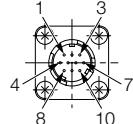

1	Phase U
2	Phase V
3	Phase W
4	FG (frame ground)

Model: JN1AS04MK2R  
Manufacturer: Japan Aviation Electronics Industry, Ltd.

Mating Connector: JN1DS04FK1  
(Not provided by YASKAWA)

#### Encoder Connector

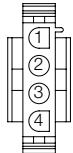

1	PS
2	/PS
3	-
4	PG5V
5*	BATO
6	-
7	FG (frame ground)
8*	BAT
9	PG0V
10	-

\* Only absolute-value models with multturn data.  
Model: JN1AS10ML1-R  
Manufacturer: Japan Aviation Electronics Industry, Ltd.

Mating connector: JN1DS10SL1  
(Not provided by YASKAWA)

### Flange Specification 4

#### Servomotor Connector

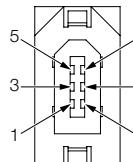

1	Phase U	Red
2	Phase V	White
3	Phase W	Blue
4	FG (frame ground)	Green (yellow)

Models  
• Plug: 350779-1  
• Pins: 350561-3 or 350690-3 (No.1 to 3)  
• Ground pin: 350654-1 or 350669-1 (No. 4)  
Manufacturer: Tyco Electronics Japan G.K.

Mating Connector  
• Cap: 350780-1  
• Socket: 350570-3 or 350689-3

#### Encoder Connector

1	PG5V
2	PG0V
3*	BAT
4*	BATO
5	PS
6	/PS

Connector Case  
FG (frame ground)

\* Only absolute-value models with multturn data.  
Model: 55102-0600  
Manufacturer: Molex Japan LLC

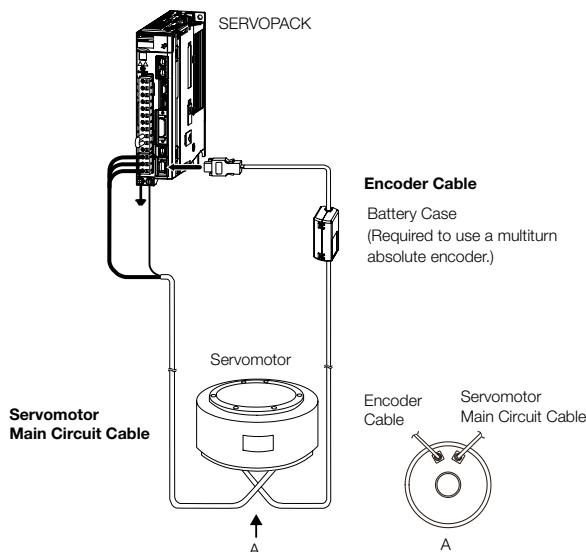

Mating Connector: 54280-0609

## Selecting Cables SGM7E

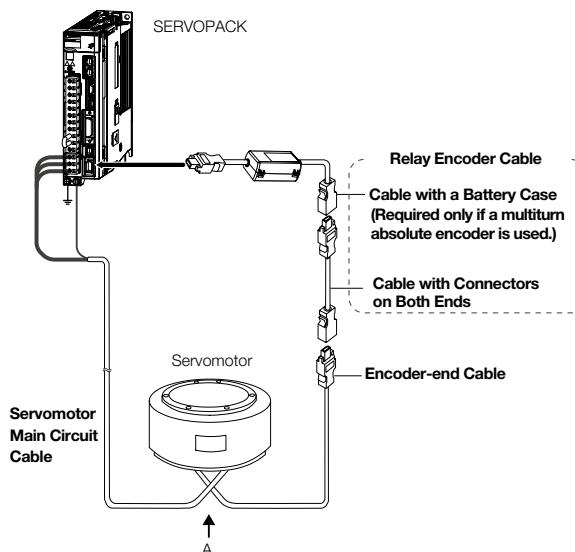

## Cable Configurations

The cables shown below are required to connect a Servomotor to a SERVOPACK.

## **Encoder Cable of 20 m or less**

## Encoder Cable of 30 m to 50 m (Relay Cable)

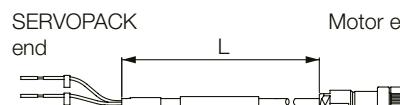

Note:

- Note:

  1. If the Encoder Cable length exceeds 20 m, be sure to use a Relay Encoder Cable.
  2. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque motor speed characteristics will become smaller because the voltage drop increases.
  3. Refer to the following manual for the following information.
    - Cable dimensional drawings and cable connection specifications
    - Order numbers and specifications of individual connectors for cables
    - Order numbers and specifications for wiring materials: Sigma 7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP SR00001 32)

## Servomotor Main Circuit Cables

Servomotor Model	Length	Order Number		Appearance
		Standard Cable	Flexible Cable <sup>†1</sup>	
SGM7E-□□□□ Flange specification: 1 <sup>‡2</sup> Non-load side installation	3 m	JZSP-CMM60-03-E	JZSP-C7MDN23-03-E	
	5 m	JZSP-CMM60-05-E	JZSP-C7MDN23-05-E	
	10 m	JZSP-CMM60-10-E	JZSP-C7MDN23-10-E	
	15 m	JZSP-CMM60-15-E	JZSP-C7MDN23-15-E	
	20 m	JZSP-CMM60-20-E	JZSP-C7MDN23-20-E	
SGM7E-□□□□ Flange specification: 4 <sup>‡2</sup> Non-load side installation (with cable on side)	3 m	JZSP-CMM00-03-E	JZSP-C7MDS23-03-E	
	5 m	JZSP-CMM00-05-E	JZSP-C7MDS23-05-E

## Small Capacity Specifications

Model SGM7F-	02A	05A	07A	04B	10B	14B	08C	17C	25C	16D	35D
Time Rating											Continuous
Thermal Class											A
Insulation Resistance											500 VDC, 10 MΩ min.
Withstand Voltage											1,500 VAC for 1 minute
Excitation											Permanent magnet
Mounting											Flange-mounted
Drive Method											Direct drive
Rotation Direction											Counterclockwise (CCW) for forward run reference when viewed from the load side
Vibration Class <sup>*1</sup>											V15
Absolute Accuracy											±15 s
Repeatability											±1.3 s
Protective Structure <sup>*2</sup>											Totally enclosed, self-cooled, IP42 (The protective structure is IP40 for CE marking)
Environmental Conditions	Ambient Air Temperature										0°C to 40°C (without freezing)
	Ambient Air Humidity										20% to 80% relative humidity (without condensation)
	Installation Site										• Must be indoors and free of corrosive and explosive gases. • Must be well-ventilated and free of dust and moisture. • Must facilitate inspection and cleaning. • Must have an altitude of 1,000 m or less. • Must be free of strong magnetic fields.
	Storage Environment										Store the Servomotor in the following environment if you store it with the power cable disconnected. Storage Temperature: -20°C to 60°C (without freezing) Storage Humidity: 20% to 80% relative humidity (without condensation)
Mechanical Tolerances <sup>*3</sup>	Runout of Output Shaft Surface	mm									0.02 (0.01 for high machine precision option)
	Runout at End of Output Shaft	mm									0.04 (0.01 for high machine precision option)
	Parallelism between Mounting Surface and Output Shaft Surface	mm									0.07
	Concentricity between Output Shaft and Flange Outer Diameter	mm									0.07
Shock Resistance <sup>*4</sup>	Impact Acceleration Rate at Flange										490 m/s <sup>2</sup>
	Number of Impacts										2 times
Vibration Resistance <sup>*4</sup>	Vibration Acceleration Rate of Flange										49 m/s <sup>2</sup>
Applicable SERVOPACKs	SGD7S-	2R8A, 2R1F		2R8A, 2R8F		5R5A	2R8A, 2R8F	5R5A	7R6A	5R5A	7R6A <sup>*5</sup> , 120A
	SGD7W- SGD7C-		2R8A			5R5A	2R8A	5R5A	7R6A	5R5A	7R6A <sup>*5</sup>

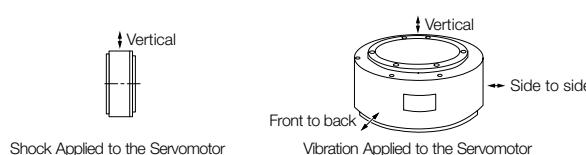

\*1. A vibration class of V15 indicates a vibration amplitude of 15 mm maximum on the Servomotor without a load at the rated motor speed.

\*2. The hollow hole section, motor mounting surface, output shaft surface, and gap around the rotating part of the shaft are excluded. Protective structure specifications apply only when the special cable is used.

\*3. Refer to the following figure for the relevant locations on the Servomotor. Refer to the dimensional drawings of the individual Servomotors for more information on tolerances.

\*4. The given values are for when the Servomotor shaft is mounted horizontally and shock or vibration is applied in the directions shown in the following figures. The strength of the vibration that the Servomotor can withstand depends on the application. Check the vibration acceleration rate.

\*5. Use derated values for this combination. Refer to the Ratings section for information on derating values.

# Direct Drive Servomotors SGM7F

## Ratings

Allowable Load Moment of Inertia (Motor Moment of Inertia Ratio)	times	25		35		25	40	45	15		25	
With External Regenerative Resistor and External Dynamic Brake Resistor *3	times	25		35		25	40	45	15		25	
Allowable Load <sup>*4</sup>	Allowable Thrust Load	N	22	24	26		1,500			3,300		4,000
	Allowable Moment Load	Nm		1,100		45	55	65	92	98	110	210
												225

\*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.

The values for other items are at 20°C. These are typical values.

\*2. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with a steel heat sink of the dimensions given in the table.

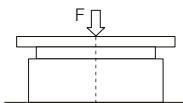

\*3. To externally connect dynamic brake resistor, select hardware option specification 020 for the SERVOPACK. However, you cannot externally connect dynamic brake resistor if you use the following SERVOPACKs (maximum applicable motor capacity: 400 W).

- SGD7S-R70□□□A020 to -R8□□□A020
- SGD7W-1R6A20A020 to -2R8A20A020
- SGD7C-1R6AMAA020 to -2R8AMAA020

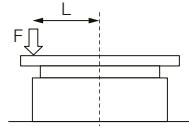

\*4. The thrust loads and moment loads that are applied while a Servomotor is operating are roughly classified into the following patterns.

Design the machine so that the thrust loads or moment loads will not exceed the values given in the table.

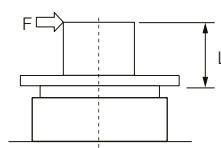

\*5. If you use an SGD7S-7R6A SERVOPACK and SGM7F-35D Servomotor together, use this value (a derated value).

Where F is the external force,  
Thrust load = F + Load mass  
Moment load = 0

Where F is the external force,  
Thrust load = F + Load mass  
Moment load = F × L

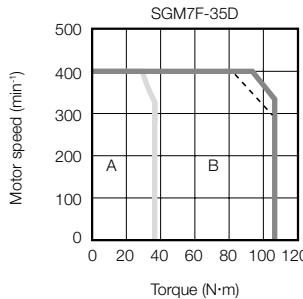

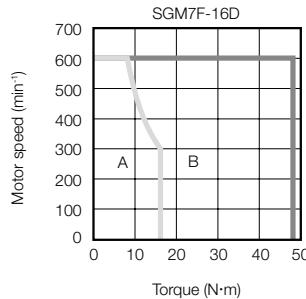

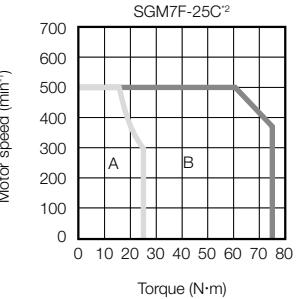

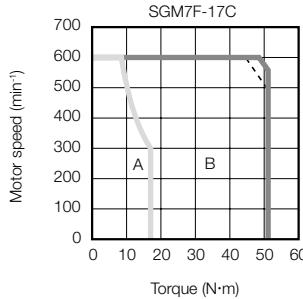

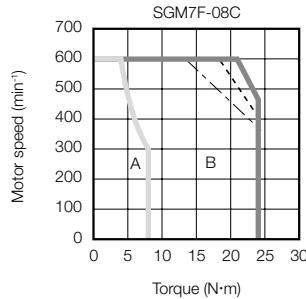

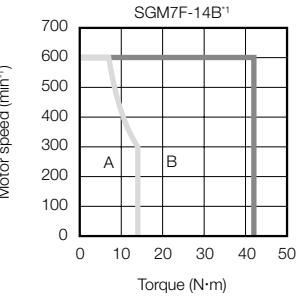

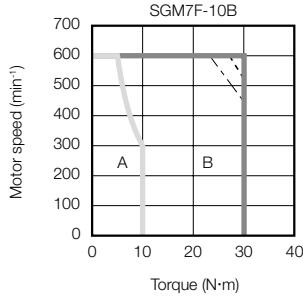

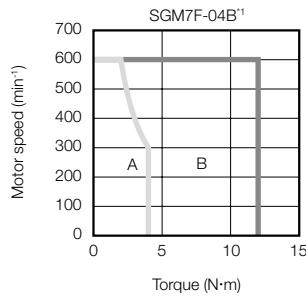

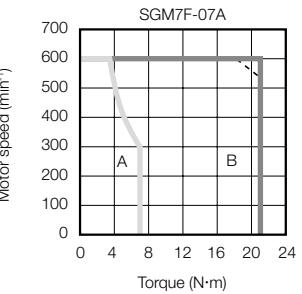

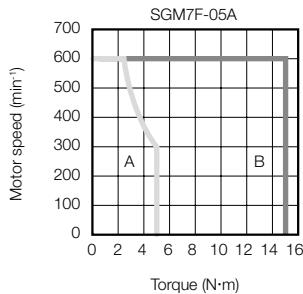

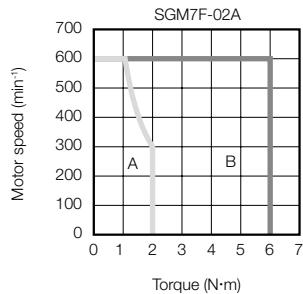

Where F is the external force,  
Thrust load = Load mass  
Moment load = F × L

Note:

For the bearings used in these Servomotors, the loss depends on the bearing temperature. The amount of heat loss is higher at low temperatures.

## Torque-Motor Speed Characteristics

[A] : Continuous duty zone ——— (solid lines): With three-phase 200-V or single-phase 230-V input  
 [B] : Intermittent duty zone ----- (dotted lines): With single-phase 200-V input  
 —— (dashed-dotted lines): With single-phase 100-V input

<sup>1</sup>\*1. The characteristics are the same for three-phase 200 V, single-phase 200 V, and single-phase 100 V.

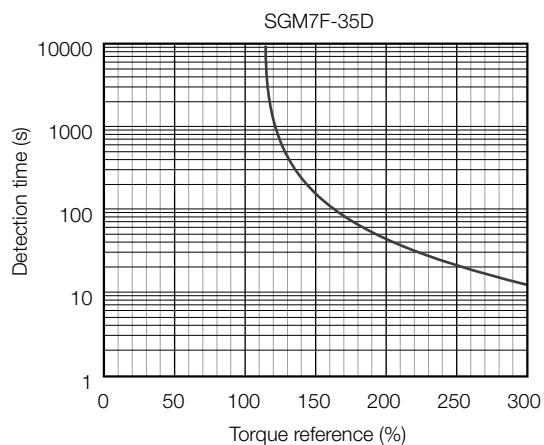

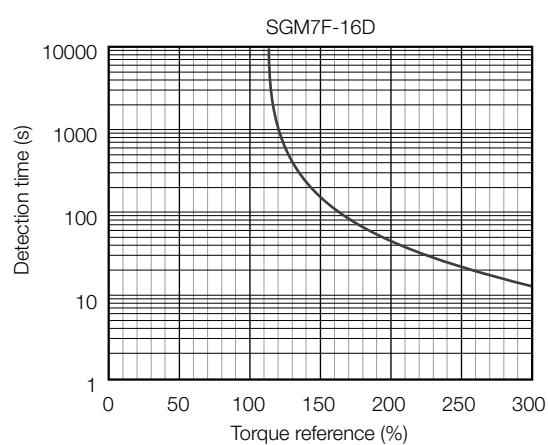

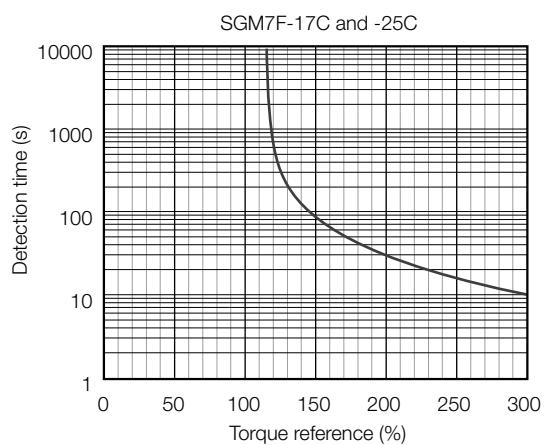

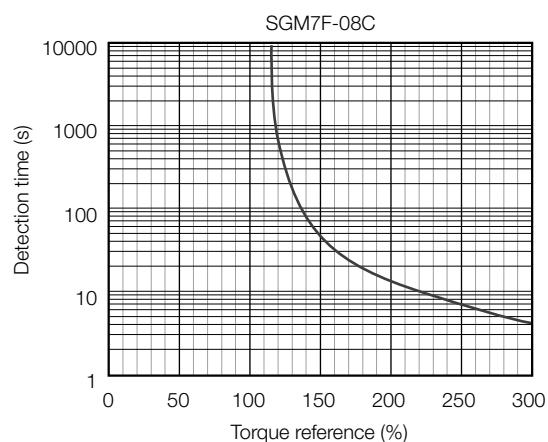

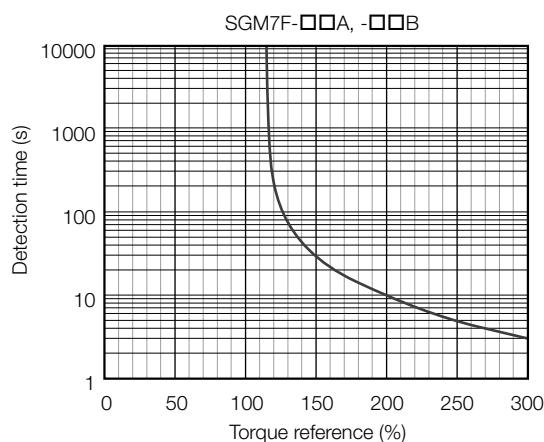

<sup>2</sup>\*2. Contact your YASKAWA representative for information on the SGM7F-25C.

Note:

1. These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.
2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torquemotor speed characteristics will become smaller because the voltage drop increases.

## Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40°C.

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in Torque-Motor Speed Characteristics.

## Allowable Load Moment of Inertia

The allowable load moments of inertia (motor moment of inertia ratios) for the Servomotors are given in the Ratings. The values are determined by the regenerative energy processing capacity of the SERVOPACK and are also affected by the drive conditions of the Servomotor. Perform the required Steps for each of the following cases.

Use the SigmaSize+ AC Servo Drive Capacity Selection Program to check the driving conditions. Contact your YASKAWA representative for information on this program.

### Exceeding the allowable Load Moment of Inertia

Use one of the following measures to adjust the load moment of inertia to within the allowable value.

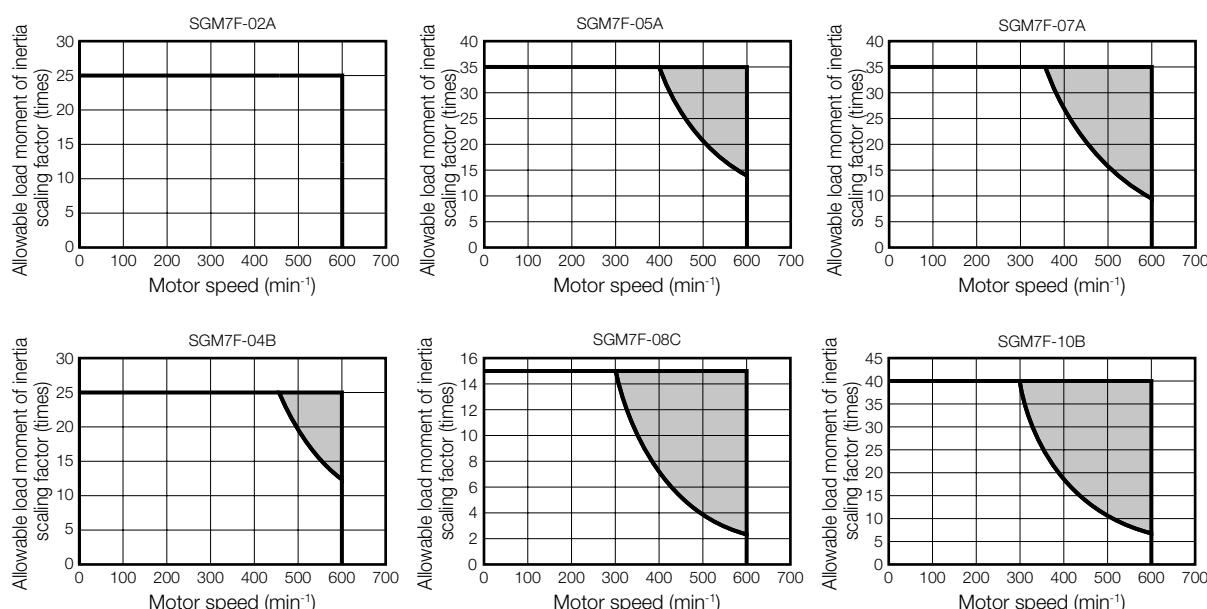

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.

If the above steps are not possible, install an external regenerative resistor.

**Information**  
An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Refer to "Built-In Regenerative Resistor" for the regenerative power (W) that can be processed by the SERVOPACKs. Install an External Regenerative Resistor when the built-in regenerative resistor cannot process all of the regenerative power.

### SERVOPACKs without built-in Regenerative Resistors

The following graph shows the allowable load moment of inertia scaling factor of the motor speed (reference values for deceleration operation at or above the rated torque). Application is possible without an external regenerative resistor within the allowable value. However, an External Regenerative Resistor is required in the shaded areas of the graphs.

Note: Applicable SERVOPACK models: SGD7S-2R8A and -2R8F

### When an External Regenerative Resistor Is Required

Install the External Regenerative Resistor. Refer to the External Regenerative Resistors section for the recommended products.

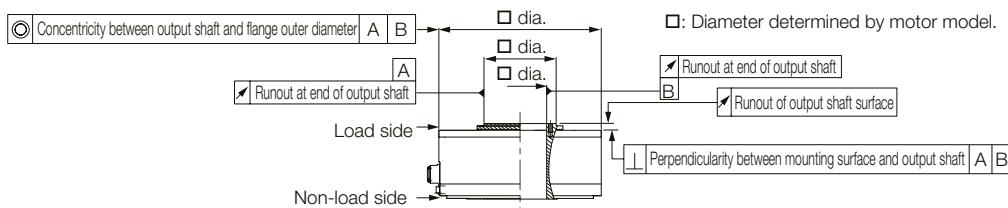

## Medium Capacity Specifications

Model SGM7F-	45M	80M	1AM	80N	1EN	2ZN
Time Rating			Continuous			
Thermal Class			F

Applicable SERVOPACKS		SGD7S-	7R6A	120A	180A	120A
		SGD7W-, SGD7C-	7R6A	—	200A	

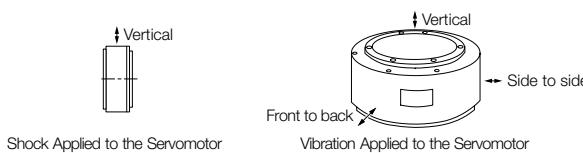

\*1. A vibration class of V15 indicates a vibration amplitude of 15 µm maximum on the Servomotor without a load at the rated motor speed.

\*2. This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.

\*3. Refer to the following figure for the relevant locations on the Servomotor. Refer to the dimensional drawings of the individual Servomotors for more information on tolerances.

\*4. The given values are for when the Servomotor shaft is mounted horizontally and shock or vibration is applied in the directions shown in the following figures. The strength of the vibration that the Servomotor can withstand depends on the application. Check the vibration acceleration rate.

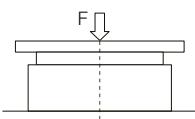

## Ratings

Model SGM7F-		45M	80M	1AM	80N	1EN	2ZN

With External Regenerative Resistor and External Dynamic Brake Resistor	times		3				
Allowable Load <sup>*3</sup>	A	mm	33		37.5		
	Allowable Thrust Load	N	9,000		16,000		
	Allowable Moment Load	Nm	180		350		

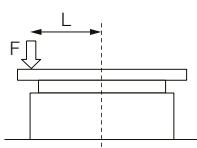

\*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.

\*2. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with a steel heat sink of the dimensions given in the table.

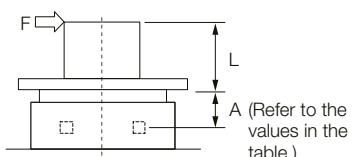

\*3. The thrust loads and moment loads that are applied while a Servomotor is operating are roughly classified into the following patterns. Design the machine so that the thrust loads or moment loads will not exceed the values given in the table.

Where F is the external force,  
Thrust load = F + Load mass  
Moment load = 0

Where F is the external force,  
Thrust load = F + Load mass  
Moment load = F × L

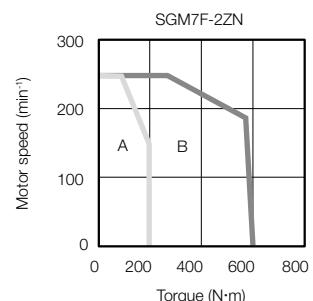

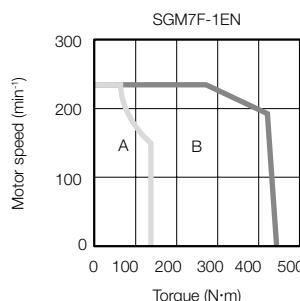

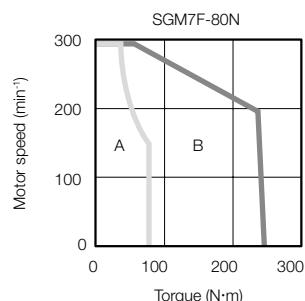

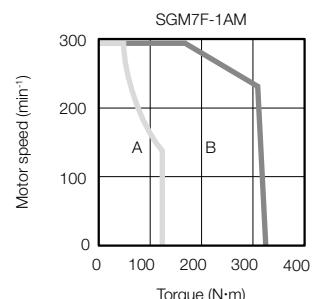

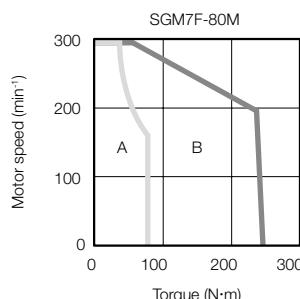

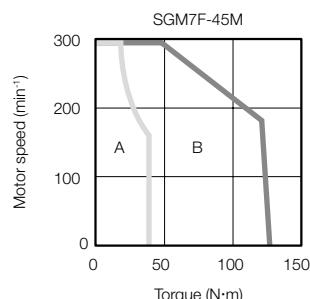

Where F is the external force,  
Thrust load = Load mass  
Moment load = F × (L + A)

### Note:

For the bearings used in these Servomotors, the loss depends on the bearing temperature. The amount of heat loss is higher at low temperatures.

## Torque-Motor Speed Characteristics

[A] : Continuous duty zone  
 [B] : Intermittent duty zone

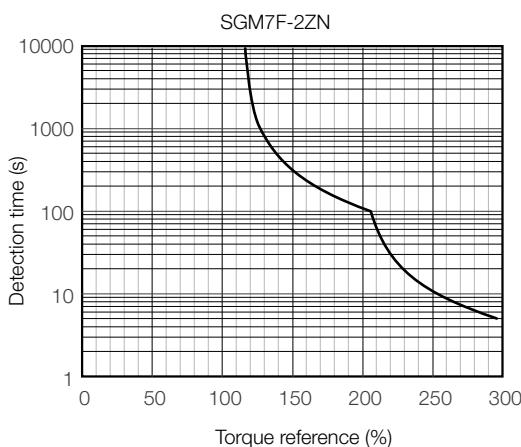

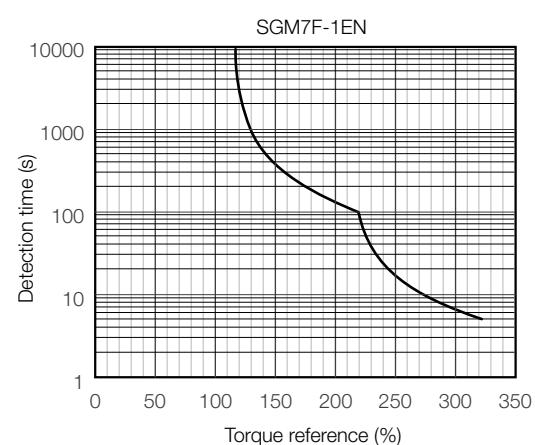

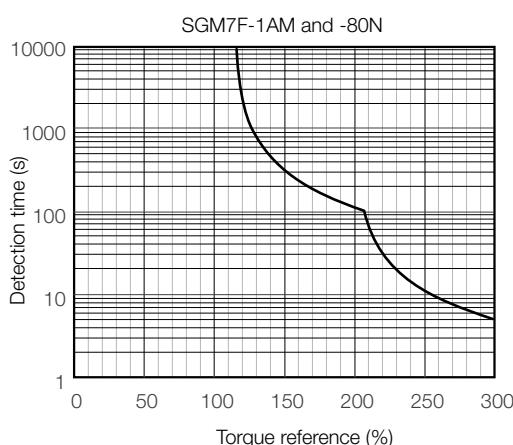

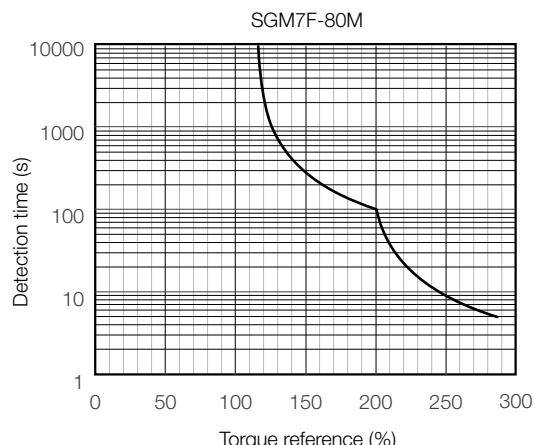

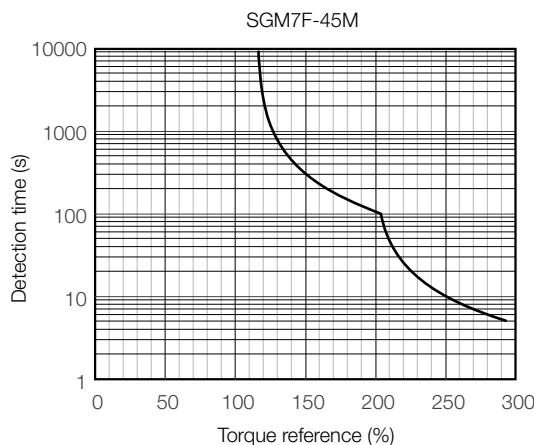

Note:

1. These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C.
2. If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
3. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

## Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor surrounding air temperature of 40°C.

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in Torque-Motor Speed Characteristics.

## Allowable Load Moment of Inertia

The allowable load moments of inertia (motor moment of inertia ratios) for the Servomotors are given in the Ratings. The values are determined by the regenerative energy processing capacity of the SERVOPACK and are also affected by the drive conditions of the Servomotor. Perform the required Steps for each of the following cases.

Use the SigmaSize+ AC Servo Drive Capacity Selection Program to check the driving conditions. Contact your YASKAWA representative for information on this program.

### Exceeding the allowable Load Moment of Inertia

Use one of the following measures to adjust the load moment of inertia to within the allowable value.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.

If the above steps are not possible, install an external regenerative resistor.

Information  
An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Refer to "Built-In Regenerative Resistor" for the regenerative power (W) that can be processed by the SERVOPACKs.  
Install an External Regenerative Resistor when the built-in regenerative resistor cannot process all of the regenerative power.

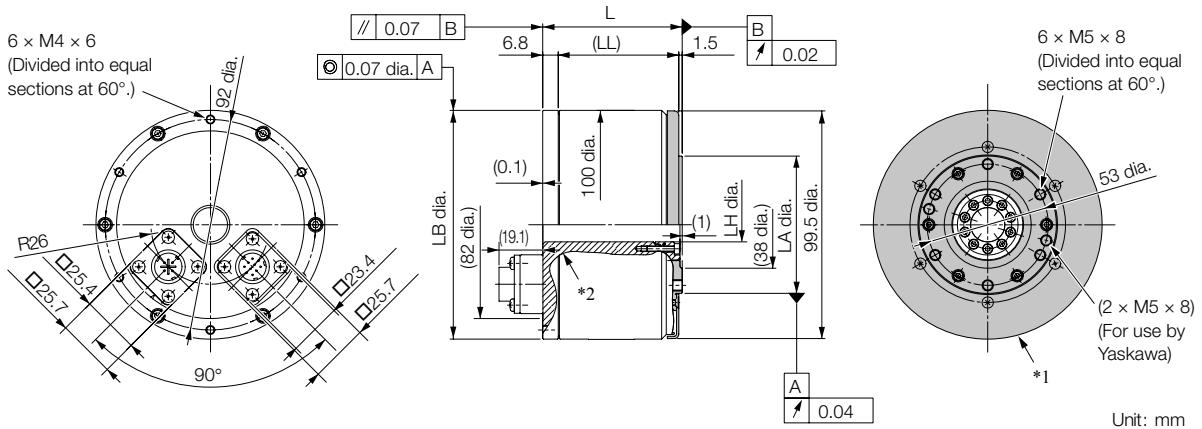

### When an external Regenerative Resistor is required

Install the External Regenerative Resistor. Refer to the External Regenerative Resistors section for the recommended products.

## Connector Specifications SGM7F

### SGM7F-□□A, -□□B, -□□C or -□□D: Flange Specification 1

#### Servomotor Connector

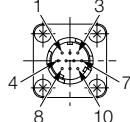

1	Phase U
2	Phase V
3	Phase W
4	FG (frame ground)

Model: JN1AS04MK2R  
Manufacturer: Japan Aviation Electronics Industry, Ltd.

Mating Connector: JN1DS04FK1  
(Not provided by YASKAWA)

#### Encoder Connector

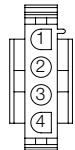

1	PS
2	/PS
3	-
4	PG5V
5*	BAT0
6	-
7	FG (frame ground)
8*	BAT
9	PG0V
10	-

\* Only absolute-value models with multturn data.  
Model: JN1AS10ML1-R  
Manufacturer: Japan Aviation Electronics Industry, Ltd.

Mating connector: JN1DS10SL1  
(Not provided by YASKAWA)

### SGM7F-□□A, -□□B, -□□C or -□□D: Flange Specification 4

#### Servomotor Connector

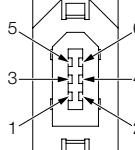

1	Phase U	Red
2	Phase V	White
3	Phase W	Blue
4	FG (frame ground)	Green (yellow)

Models  
• Plug: 350779-1  
• Pins: 350561-3 or 350690-3 (No.1 to 3)  
• Ground pin: 350654-1 or 350669-1 (No. 4)  
Manufacturer: Tyco Electronics Japan G.K.

Mating Connector  
• Cap: 350780-1  
• Socket: 350570-3 or 350689-3

#### Encoder Connector

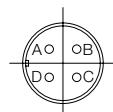

1	PG5V
2	PG0V
3*	BAT
4*	BAT0
5	PS
6	/PS

Connector Case  
FG (frame ground)  
\* Only absolute-value models with multturn data.  
Model: 55102-0600  
Manufacturer: Molex Japan LLC

Mating Connector: 54280-0609

### SGM7F-□□M or -□□N: Flange Specification 1 or 3

#### Servomotor Connector

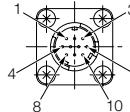

A	Phase U
B	Phase V
C	Phase W
D	FG (frame ground)

Models: CE05-2A18-10PD  
Manufacturer: DDK Ltd.

Mating Connector  
• Plug: CE05-6A18-10SD-B-BSS  
• Cable clamp: CE3057-10A-□(D265)

#### Encoder Connector

1	PS
2	/PS
3	-
4	PG5V
5*	BAT0
6	-
7	FG (frame ground)
8*	BAT
9	PG0V
10	-

\* Only absolute-value models with multturn data.  
Model: JN1AS10ML1  
Manufacturer: Japan Aviation Electronics Industry, Ltd.

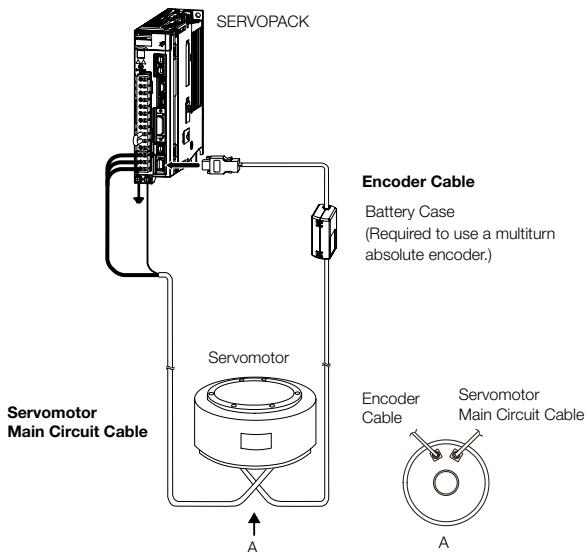

Mating Connector: JN1DS10SL1

## Selecting Cables SGM7F

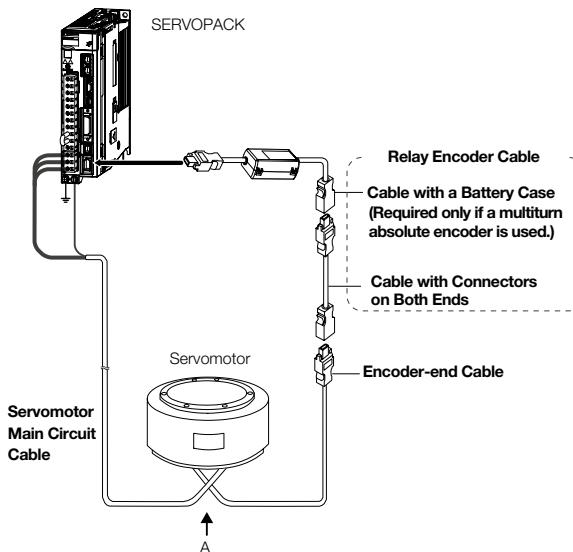

## Cable Configurations

The cables shown below are required to connect a Servomotor to a SERVOPACK.

#### **Encoder Cable of 20 m or less**

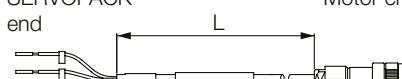

#### **Encoder Cable of 30 m to 50 m (Relay Cable)**

Note:

1. If the Encoder Cable length exceeds 20 m, be sure to use a Relay Encoder Cable.
  2. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque/motor speed characteristics will become smaller because the voltage drop increases.
  3. Refer to the following manual for the following information.
    - Cable dimensional drawings and cable connection specifications
    - Order numbers and specifications of individual connectors for cables
    - Order numbers and specifications for wiring materials: Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

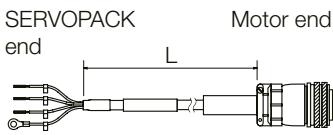

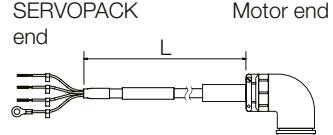

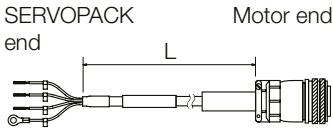

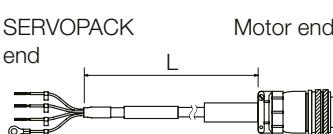

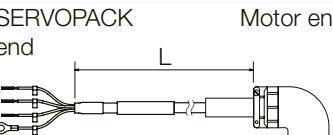

# Servomotor Main Circuit Cables

## Ratings and Specifications

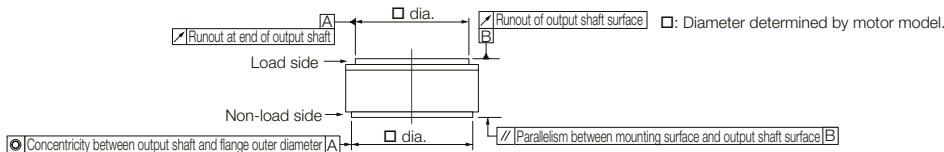

### Small-Capacity Coreless Servomotors: Specifications

Voltage	200 V																		
Model SGMCS-	02B	05B	07B	04C	10C	14C	08D	17D	25D	16E	35E								
Time Rating	Continuous																		
Thermal Class	A																		
Insulation Resistance	500 VDC, 10 MΩ min.																		
Withstand Voltage	1,500 VAC for 1 minute																		
Excitation	Permanent magnet																		
Mounting	Flange-mounted																		
Drive Method	Direct drive																		
Rotation Direction	Counterclockwise (CCW) for forward run reference when viewed from the load side																		
Vibration Class *1	V15																		
Absolute Accuracy	±15 s																		
Repeatability	±1.3 s																		
Protective Structure *2	Totally enclosed, self-cooled, IP42																		
Ambient Air Temperature	0°C to 40°C (without freezing)																		
Ambient Air Humidity	20% to 80% relative humidity (without condensation)																		
Environmental Conditions	Installation Site • Must be indoors and free of corrosive and explosive gases. • Must be well-ventilated and free of dust and moisture. • Must facilitate inspection and cleaning. • Must have an altitude of 1,000 m or less. • Must be free of strong magnetic fields.  Storage Environment Store the Servomotor in the following environment if you store it with the power cable disconnected. Storage Temperature: -20°C to 60°C (without freezing) Storage Humidity: 20% to 80% relative humidity (without condensation)																		
Runout of Output Shaft Surface	mm	0.02																	
Runout at End of Output Shaft	mm	0.04																	
Parallelism between Mounting Surface and Output Shaft Surface	mm	0.07																	
Concentricity between Output Shaft and Flange Outer Diameter	mm	0.07																	
Shock Resistance *4	490 m/s <sup>2</sup>																		
Number of Impacts	2 times																		
Vibration Resistance *5	49 m/s <sup>2</sup>																		
Applicable SERVOPACKs	SGD7S-	2R8A, 2R1F			2R8A, 2R8F			5R5A											
	SGD7W- SGD7C-	2R8A																	

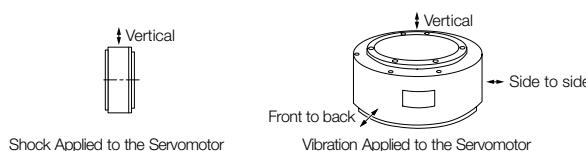

\*1. A vibration class of V15 indicates a vibration amplitude of 15 µm maximum on the Servomotor without a load at the rated motor speed.

\*2. The hollow hole section, motor mounting surface, output shaft surface, and gap around the rotating part of the shaft are excluded. Protective structure specifications apply only when the special cable is used.

\*3. Refer to the following figure for the relevant locations on the Servomotor. Refer to the dimensional drawings of the individual Servomotors for more information on tolerances.

\*4. The given values are for when the Servomotor shaft is mounted horizontally and shock or vibration is applied in the directions shown in the following figures. The strength of the vibration that the Servomotor can withstand depends on the application. Check the vibration acceleration rate.

Shock Applied to the Servomotor

Vibration Applied to the Servomotor

## Small-Capacity Coreless Servomotors: Ratings

Voltage		200 V											
Model SGMCS-		02B	05B	07B	04C	10C	14C	08D	17D	25D	16E	35E

Stall Torque *1	Nm	2.05	5.15	7.32	4.09	10.1	14.2	8.23	17.4	25.4	16.6	35.6	
Rated Current *1	A	1.8	1.7	1.4		2.2		2.8	1.9	2.5	2.6	3.3	3.5
Instantaneous Maximum Current *1	A	5.4	5.1	4.1		7.0		8.3	5.6	7.5	8.0	9.4	10.0
Rated Motor Speed *1	min <sup>-1</sup>		200			200			200	150	200	150	
Maximum Motor Speed *1	min <sup>-1</sup>		500		500	400	300	500	350	250	500	250	
Torque Constant	Nm/A	1.18	3.17	5.44	2.04	5.05	5.39	5.10	7.79	10.8	5.58	11.1	
Motor Moment of Inertia	$\times 10^{-4}$ kg·m <sup>2</sup>	28.0	51.0	77.0	77.0	140	220	285	510	750	930	1430	
Rated Power Rate *1	kW/s	1.43	4.90	6.36	2.08	7.14	8.91	2.25	5.67	8.33	2.75	8.57	
Rated Angular Acceleration Rate *1	rad/s <sup>2</sup>	710	980	910	520	710	640	280	330	170	240		
Heat Sink Size	mm	350 x 350 x 12			450 x 450 x 12			550 x 550 x 12			650 x 650 x 12		
Allowable Load Moment of Inertia (Motor Moment of Inertia Ratio)		10 times				5 times			3 times				
Allowable Thrust Load	N	1,500				3,300			4,000			11,000	
Allowable Moment Load	Nm	40	50	64	70	75	90	93	103	135	250	320	

\*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C.  
These are typical values.

\*2. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with a steel heat sink of the dimensions given in the table.

\*3. To externally connect dynamic brake resistor, select hardware option specification 020 for the SERVOPACK. However, you cannot externally connect dynamic

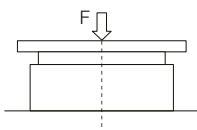

brake resistor if you use the following SERVOPACKs (maximum applicable motor capacity: 400 W).

SGD7S-R70□□A020 to -2R8□□A020

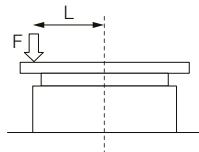

SGD7W-1R6A20A020 to -2R8A20A020

SGD7C-1R6AMAA020 to -2R8AMAA020

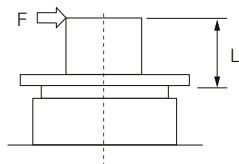

\*4. The thrust loads and moment loads that are applied while a Servomotor is operating are roughly classified into the following patterns. Design the machine so that the thrust loads or moment loads will not exceed the values given in the table.

Where F is the external force,  
Thrust load = F + Load mass  
Moment load = 0

Where F is the external force,  
Thrust load = F + Load mass  
Moment load = F × L

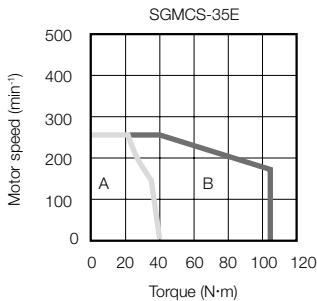

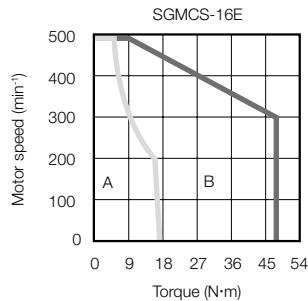

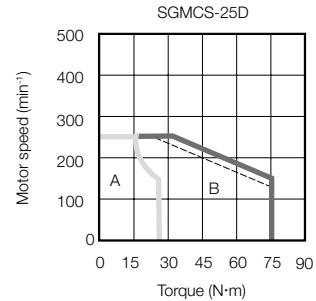

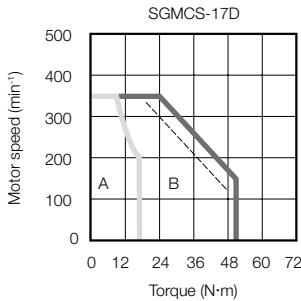

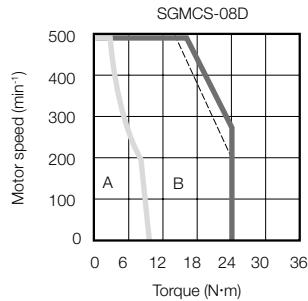

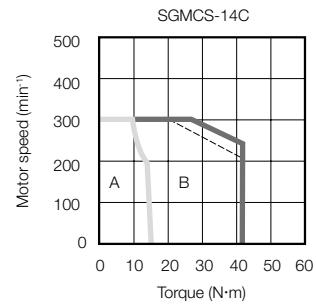

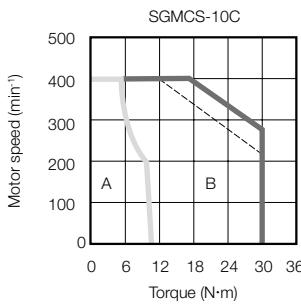

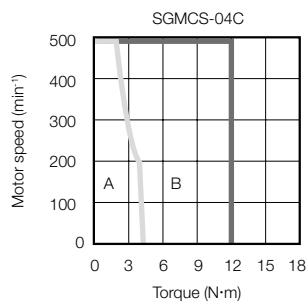

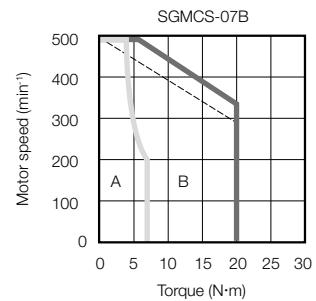

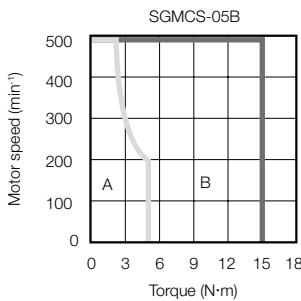

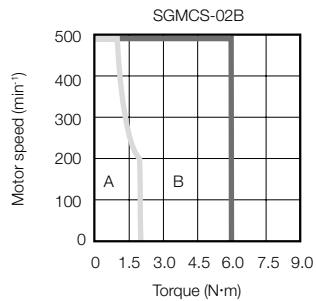

Where F is the external force  
Thrust load = Load mass  
Moment load = F × L

### Note:

For the bearings used in these Servomotors, the loss depends on the bearing temperature. The amount of heat loss is higher at low temperatures.

## Small-Capacity Coreless Servomotors: Torque-Motor Speed Characteristics

[A] : Continuous duty zone ——— (solid lines): With three-phase 200-V input  
 [B] : Intermittent duty zone - - - - (dotted lines): With single-phase 100-V input

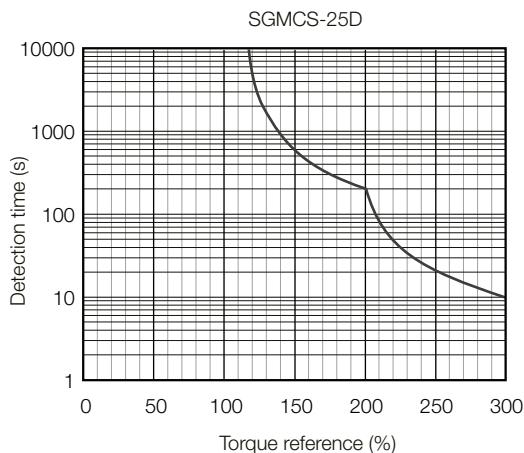

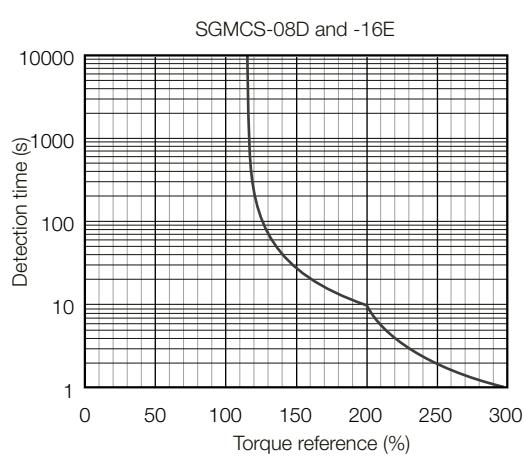

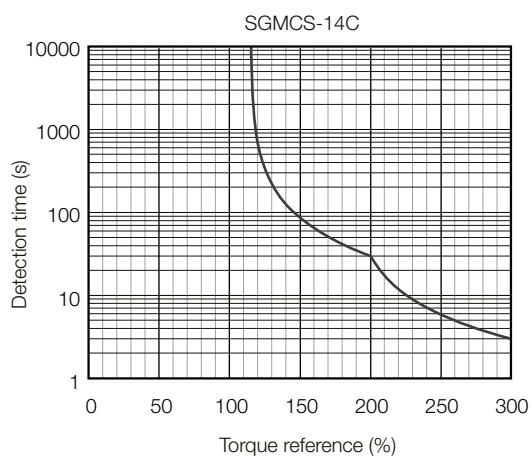

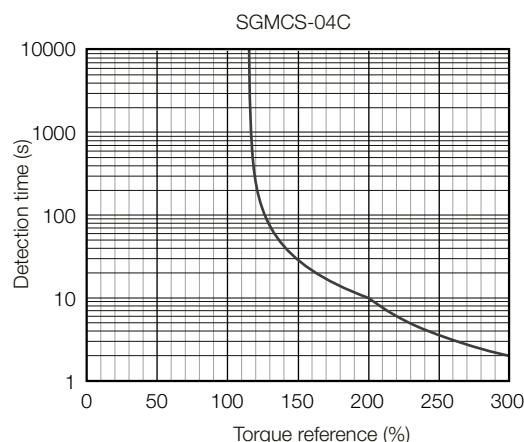

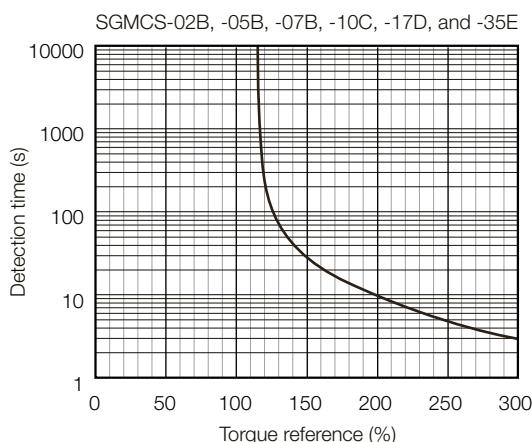

### Note:

- These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.
- The characteristics in the intermittent duty zone depend on the power supply voltage.
- If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
- If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torquemotor speed characteristics will become smaller because the voltage drop increases.

## Small-Capacity, Coreless Servomotors: Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor ambient air temperature of 40°C.

Note:

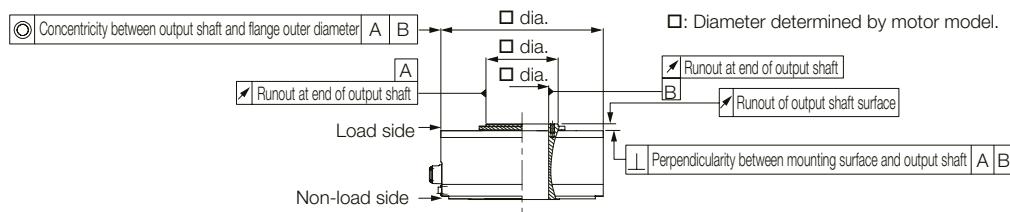

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in Small Capacity, Coreless Servomotors: Torque-Motor Speed Characteristics.

Voltage		200 V						
Model SGMCS-		45M	80M	1AM	80N	1EN	2ZN	
Time Rating		Continuous						
Thermal Class		F						
Insulation Resistance		500 VDC, 10 MΩ min.						
Withstand Voltage		1,500 VAC for 1 minute						
Excitation		Permanent magnet						
Mounting		Flange-mounted						
Drive Method		Direct drive						
Rotation Direction		Counterclockwise (CCW) for forward run reference when viewed from the load side						
Vibration Class *1		V15						
Absolute Accuracy		±15 s						
Repeatability		±1.3 s						
Protective Structure *2		Totally enclosed, self-cooled, IP44						
Environmental Conditions	Ambient Air Temperature	0°C to 40°C (without freezing)						
	Ambient Air Humidity	20% to 80% relative humidity (without condensation)						
	Installation Site	<ul style="list-style-type: none"> <li>Must be indoors and free of corrosive and explosive gases.</li> <li>Must be well-ventilated and free of dust and moisture.</li> <li>Must facilitate inspection and cleaning.</li> <li>Must have an altitude of 1,000 m or less.</li> <li>Must be free of strong magnetic fields.</li> </ul>						
Mechanical Tolerances *3	Storage Environment	<p>Store the Servomotor in the following environment if you store it with the power cable disconnected.</p> <p>Storage Temperature: -20°C to 60°C (without freezing) Storage Humidity: 20% to 80% relative humidity (without condensation)</p>						
	Runout of Output Shaft Surface	mm	0.02					
	Runout at End of Output Shaft	mm	0.04					
Mechanical Tolerances *3	Parallelism between Mounting Surface and Output Shaft Surface	mm	—					
	Concentricity between Output Shaft and Flange Outer Diameter	mm	0.08					
	Perpendicularity between Mounting Surface and Output Shaft	mm	0.08					
Shock Resistance *4	Impact Acceleration Rate at Flange		490 m/s <sup>2</sup>					
Vibration Resistance *5	Number of Impacts		2 times					
Vibration Resistance *5	Vibration Acceleration Rate at Flange		24.5 m/s <sup>2</sup>					
Applicable SERVOPACKs	SGD7S-	7R6A	120A	180A	120A	200A		
	SGD7W-	7R6A			—			

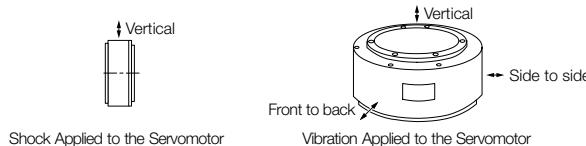

\*1. A vibration class of V15 indicates a vibration amplitude of 15 µm maximum on the Servomotor without a load at the rated motor speed.

\*2. This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.

\*3. Refer to the following figure for the relevant locations on the Servomotor. Refer to the dimensional drawings of the individual Servomotors for more information on tolerances.

\*4. The given values are for when the Servomotor shaft is mounted horizontally and shock or vibration is applied in the directions shown in the following figures. The strength of the vibration that the Servomotor can withstand depends on the application. Check the vibration acceleration rate.

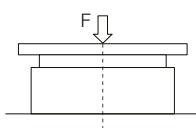

## Medium-Capacity Servomotors with Cores: Ratings

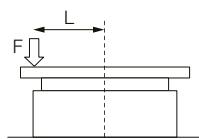

\*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.

\*2. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with a steel heat sink of the dimensions given in the table.

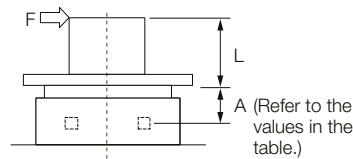

\*3. The thrust loads and moment loads that are applied while a Servomotor is operating are roughly classified into the following patterns. Design the machine so that the thrust loads or moment loads will not exceed the values given in the table.

Where F is the external force,  
Thrust load =  $F + \text{Load mass}$   
Moment load = 0

Where F is the external force,  
Thrust load =  $F + \text{Load mass}$   
Moment load =  $F \times L$

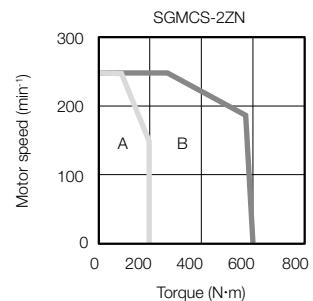

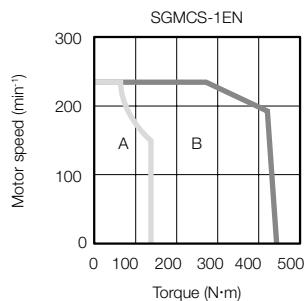

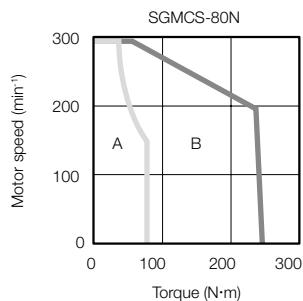

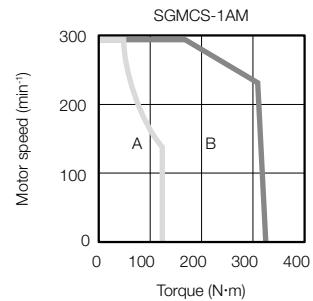

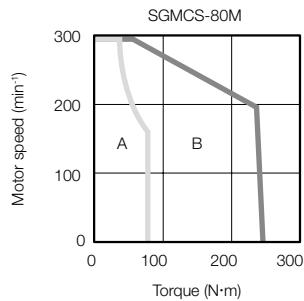

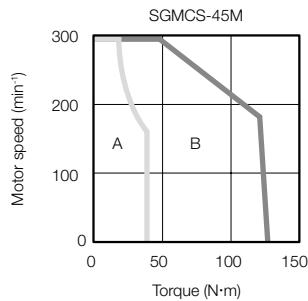

Where F is the external force,  
Thrust load = Load mass  
Moment load =  $F \times (L + A)$

Note:

Note:  
For the bearings used in these Servomotors, the loss depends on the bearing temperature. The amount of heat loss is higher at low temperatures.

## Medium-Capacity Servomotors with Cores: Torque-Motor Speed Characteristics

[A] : Continuous duty zone  
 [B] : Intermittent duty zone

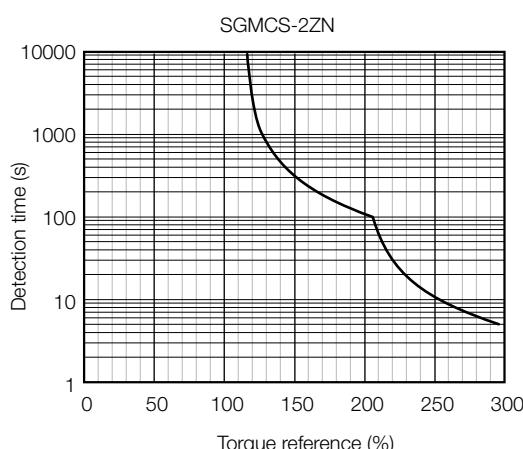

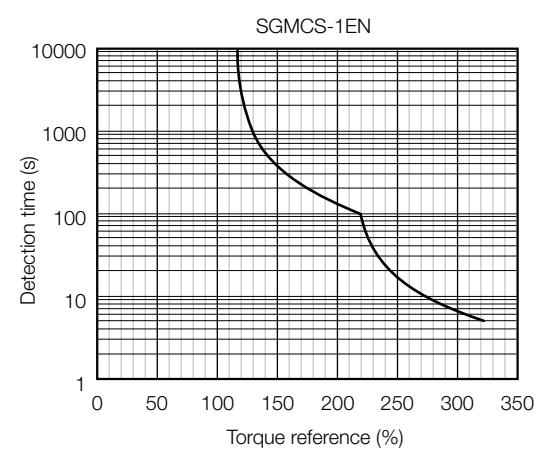

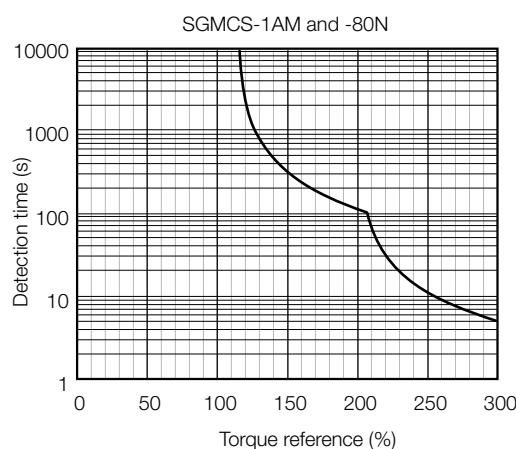

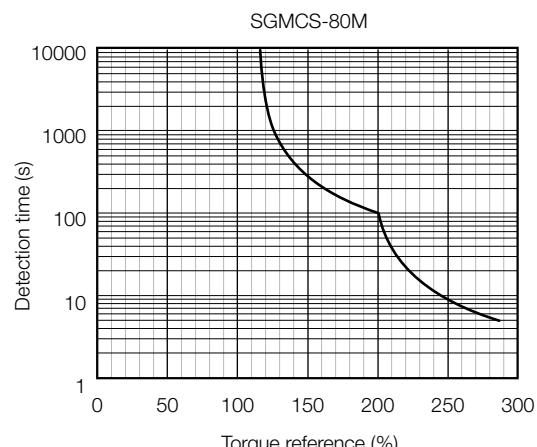

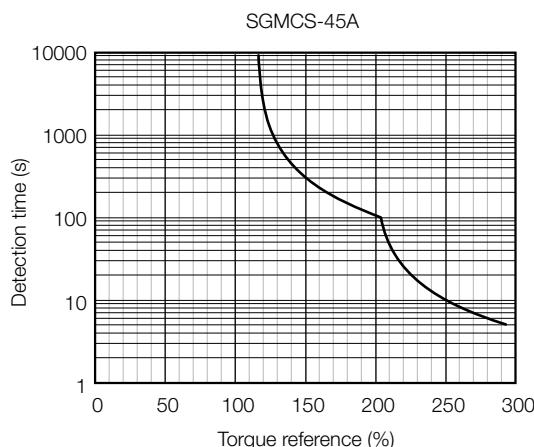

### Note:

1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.
2. If the effective torque is within the allowable range for the rated torque, the Servomotor can be used within the intermittent duty zone.
3. If the length of the Servomotor Main Circuit Cable exceeds 20m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

## Medium-Capacity Servomotors with Cores: Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor ambient air temperature of 40°C.

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective torque remains within the continuous duty zone given in Medium-Capacity Servomotors with Cores: Torque-Motor Speed Characteristics.

## Allowable Load Moment of Inertia

The allowable load moments of inertia (motor moment of inertia ratios) for the Servomotors are given in the Ratings section. The values are determined by the regenerative energy processing capacity of the SERVOPACK and are also affected by the drive conditions of the Servomotor. Perform the required Steps for each of the following cases.

Use the SigmaSize+ AC Servo Drive Capacity Selection Program to check the driving conditions. Contact your YASKAWA representative for information on this program.

### Exceeding the Allowable Load Moment of Inertia

Use one of the following measures to adjust the load moment of inertia to within the allowable value.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.

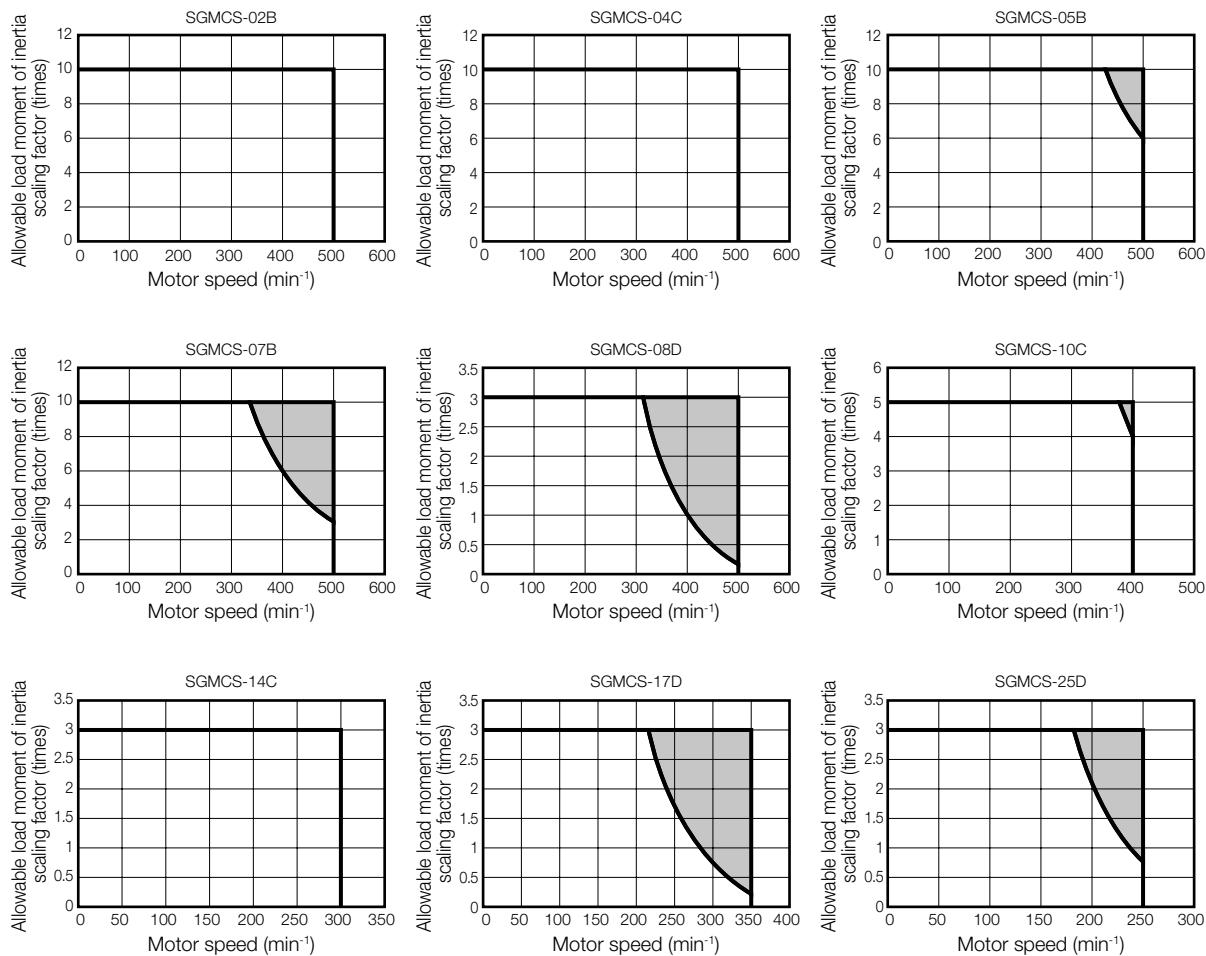

If the above steps are not possible, install an external regenerative resistor.

#### Information

An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Refer to "Built-In Regenerative Resistor" for the regenerative power (W) that can be processed by the SERVOPACKs. Install an External Regenerative Resistor when the built-in regenerative resistor cannot process all of the regenerative power.

## Allowable Load Moment of Inertia Scaling Factor for SERVOPACKS without built-in Regenerative Resistors

The following graph shows the allowable load moment of inertia scaling factor of the motor speed (reference values for deceleration operation at or above the rated torque). Application is possible without an external regenerative resistor within the allowable value. However, an External Regenerative Resistor is required in the shaded areas of the graphs.

## When an external Regenerative Resistor is required

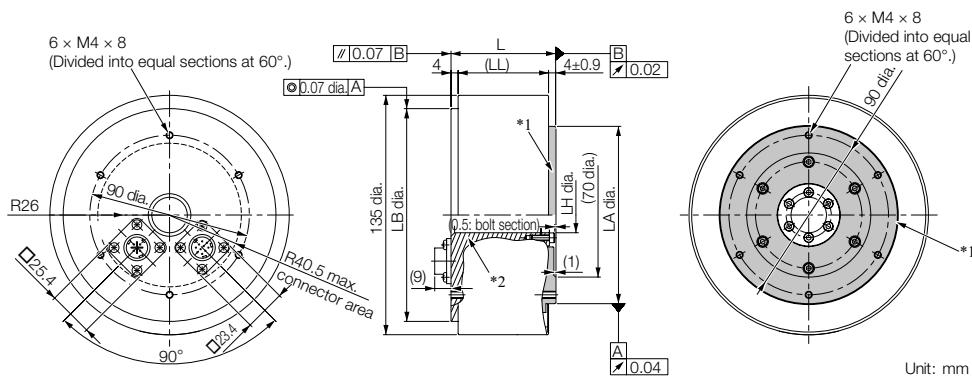

Install the External Regenerative Resistor. Refer to the External Regenerative Resistors section for the recommended products.

## Selecting Cables SGMCS

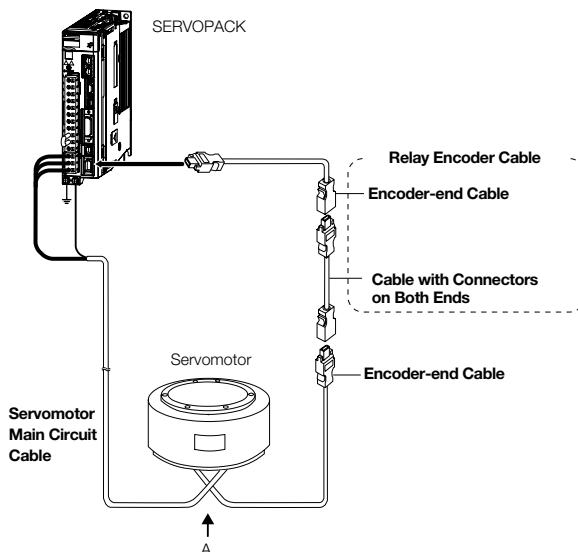

### Cable Configurations

The cables shown below are required to connect a Servomotor to a SERVOPACK.

#### Encoder Cable of 20 m or less

#### Encoder Cable of 30 m to 50 m (Relay Cable)

Note:

- If the Encoder Cable length exceeds 20 m, be sure to use a Relay Encoder Cable.
- If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque motor speed characteristics will become smaller because the voltage drop increases.
- Refer to the following manual for the following information.
  - Cable dimensional drawings and cable connection specifications
  - Order numbers and specifications of individual connectors for cables
  - Order numbers and specifications for wiring materials: Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

		20 m	JZSP-CMP00-20-E	JZSP-CMP10-20-E	

\*1. Use Flexible Cables for moving parts of machines, such as robots. The recommended bending radius (R) is 68 mm or larger.

\*2. Refer to the Model Designations section for the flange specifications.

## Relay Encoder Cables of 30 m to 50 m

Servomotor Model	Description	Length	Order Number <sup>*1</sup>	Appearance
SGMCS-□□ Flange specification: 1 or 3 <sup>*2</sup>	Encoder-end Cable (for incremental or absolute encoder)	0.3m	JZSP-CSP15-E	
SGMCS-□□ Flange specification: 1, 3 or 4 <sup>*2</sup>	Cables with Connectors on Both Ends (for incremental or absolute encoder)	30m	JZSP-UCMP00-30-E	
		40m	JZSP-UCMP00-40-E	
		50m	JZSP-UCMP00-50-E	

\*1. Flexible Cables are not available.

\*2. Refer to the Model Designations section for the flange specifications.

## Model Designations

SGMCV - 04 B E A 1 1

Direct Drive Servomotors	1st + 2nd	3rd	4th	5th	6th	7th	digit
-----------------------------	-----------	-----	-----	-----	-----	-----	-------

1st + 2nd digit - Rated Output	
Code	Specification
04	4 Nm
08	8 Nm
10	10 Nm
14	14 Nm
17	17 Nm
25	25 Nm
35	35 Nm

4th digit - Serial Encoder	
Code	Specification
E	22-bit single-turn absolute encoder
I	22-bit multiturn absolute encoder

6th digit - Flange	
Code	Mounting
1	Non-load side
4	Non-load side (with cable on side)

9th digit - Design Revision Order	
Code	Specification
A	Standard Model

7th digit - Options	
Code	Specification
1	Without options
5	High machine precision (runout at end of shaft and runout of shaft surface: 0.01 mm)

## 3rd digit - Servomotor Outer Diameter

Code	Specification
B	135 mm dia.
C	175 mm dia.
D	230 mm dia.

## Note:

1. Direct Drive Servomotors are not available with holding brakes.
2. This information is provided to explain model numbers. It is not meant to imply that models are available for all combinations of codes.

## Manufactured Models

Rated Torque [Nm]	Servomotor Outer Diameter		
	B (135 mm dia.)	C (175 mm dia.)	D (230 mm dia.)
4	SGMCV-04B	—	—
8	—	SGMCV-08C	—
10	SGMCV-10B	—	—
14	SGMCV-14B	—	—
16	—	—	SGMCV-16D
17	—	SGMCV-17C	—
25	—	SGMCV-25C	—
35	—	—	SGMCV-35D

## Note:

The above table shows combinations of the rated torque and outer diameter.  
The fourth through seventh digits have been omitted.

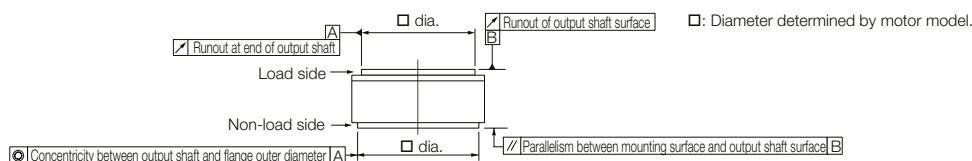

## Direct Drive Servomotors SGMCV Specifications

Model SGMCV-	04B	10B	14B	08C	17C	25C	16D	35D
Time Rating				Continuous				
Thermal Class				A				
Insulation Resistance				500 VDC, 10 MΩ min.				
Withstand Voltage				1,500 VAC for 1 minute				
Excitation				Permanent magnet				
Mounting				Flange-mounted				
Drive Method				Direct drive				
Rotation Direction				Counterclockwise (CCW) for forward run reference when viewed from the load side				
Vibration Class*1				V15				
Absolute Accuracy				±15 s				
Repeatability				±1.3 s				
Protective Structure*2				Totally enclosed, self-cooled, IP42				
Environmental Conditions	Ambient Air Temperature			0°C to 40°C (without freezing)				
	Ambient Air Humidity			20% to 80% relative humidity (without condensation)				
	Installation Site			• Must be indoors and free of corrosive and explosive gases. • Must be well-ventilated and free of dust and moisture. • Must facilitate inspection and cleaning. • Must have an altitude of 1,000 or less. • Must be free of strong magnetic fields.				
	Storage Environment			Store the Servomotor in the following environment if you store it with the power cable disconnected. Storage Temperature: -20°C to 60°C (without freezing) Storage Humidity: 20% to 80% relative humidity (without condensation)				
	Runout of Output Shaft Surface	mm		0.02 (0.01 for high machine precision option)				
Mechanical Tolerances*3	Runout at End of Output Shaft	mm		0.04 (0.01 for high machine precision option)				
	Parallelism between Mounting Surface and Output Shaft Surface	mm		0.07				
	Concentricity between Output Shaft and Flange Outer Diameter	mm		0.07				
	Impact Acceleration Rate at Flange			490 m/s <sup>2</sup>				
Shock Resistance*4	Number of Impacts			2 times				
	Vibration Acceleration Rate at Flange			49 m/s <sup>2</sup>				
Applicable SERVOPACKs	SGD7S-	2R8A, 2R8F	5R5A	2R8A, 2R8F	5R5A	7R6A	5R5A	7R6A*5, 120A
	SGD7W-	2R8A		2R8A				7R6A*5

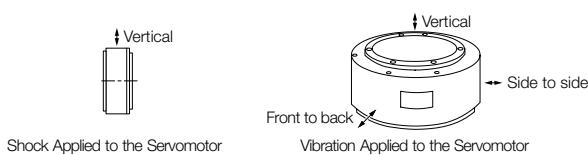

\*1. A vibration class of V15 indicates a vibration amplitude of 15 µm maximum on the Servomotor without a load at the rated motor speed.

\*2. The hollow hole section, motor mounting surface, output shaft surface, and gap around the rotating part of the shaft are excluded. Protective structure specifications apply only when the special cable is used.

\*3. Refer to the following figure for the relevant locations on the Servomotor. Refer to the dimensional drawings of the individual Servomotors for more information on tolerances.

\*4. The given values are for when the Servomotor shaft is mounted horizontally and shock or vibration is applied in the directions shown in the following figures. The strength of the vibration that the Servomotor can withstand depends on the application. Check the vibration acceleration rate.

\*5. Use derated values for this combination. Refer to the Ratings section for information on derating values.

# Direct Drive Servomotors SGMCV

## Ratings

Model SGMCV-		04B	10B	14B	08C	17C	25C	16D	35D
Rated Output *1	W	126	314	440	251	534	785	503	1,100 1,000*5
Rated Torque *1, *2	Nm	4.00	10.0	14.0	8.00	17.0	25.0	16	35
Instantaneous Maximum Torque *1	Nm	12.0	30.0	42.0	24.0	51.0	75.0	48	105
Stall Torque *1	Nm	4.00	10.0	14.0	8.00	17.0	25.0	16	35
Rated Current *1	A	1.8	2.8	4.6	2.3	4.5			5
Instantaneous Maximum Current *1	A	5.6	8.9	14.1	7.3	14.7	13.9	16.9	16
Rated Motor Speed *1	min <sup>-1</sup>				300				300 270*5
Maximum Motor Speed *1	min <sup>-1</sup>			600			500	600	400
Torque Constant	Nm/A	2.39	3.81	3.27	3.81	4.04	6.04	3.35	7.33
Motor Moment of Inertia	×10 <sup>-4</sup> kg·m <sup>2</sup>	16.2	25.2	36.9	56.5	78.5	111	178	276
Rated Power Rate *1	kW/s	9.88	39.7	53.1	11.3	36.8	56.3	14.4	44.4
Rated Angular Acceleration Rate *1	rad/s <sup>2</sup>	2,470	3,970	3,790	1,420	2,170	2,250	899	1,270
Heat Sink Size	mm	350 × 350 × 12			450 × 450 × 12		550 × 550 × 12		
Allowable Load Moment of Inertia (Motor Moment of Inertia Ratio)		25 times	40 times	45 times	15 times	25 times	25 times	10 times	15 times
With External Regenerative Resistor and External Dynamic Brake Resistor*3		25 times	40 times	45 times	15 times	25 times	25 times	10 times	15 times
Allowable Load *4	Allowable Thrust Load N Allowable Moment Load Nm		1,500			3,300		4,000	
		45	55	65	92	98	110	210	225

\*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.

The values for other items are at 20°C. These are typical values.

\*2. The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with a steel heat sink of the dimensions given in the table.

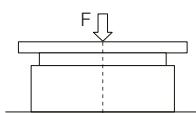

\*3. To externally connect dynamic brake resistor, select hardware option specification 020 for the SERVOPACK. However, you cannot externally connect dynamic brake resistor if you use the following SERVOPACKs (maximum applicable motor capacity: 400 W).

- SGD7S-R70□□□A020 to -R88□□□A020
- SGD7W-1R6A20A020 to -2R8A20A020
- SGD7C-1R6AMAA020 to -2R8AMAA020

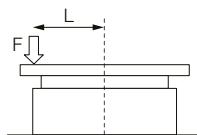

\*4. The thrust loads and moment loads that are applied while a Servomotor is operating are roughly classified into the following patterns. Design the machine so that the thrust loads or moment loads will not exceed the values given in the table.

\*5. If you use an SGD7S-7R6A SERVOPACK and SGMCV-35D Servomotor together, use this value (a derated value).

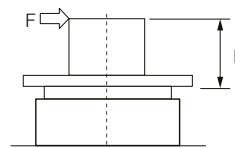

Note: For the bearings used in these Servomotors, the loss depends on the bearing temperature. The amount of heat loss is higher at low temperatures.

Where F is the external force,  
Thrust load = F + Load mass  
Moment load = 0

Where F is the external force,  
Thrust load = F + Load mass  
Moment load = F × L

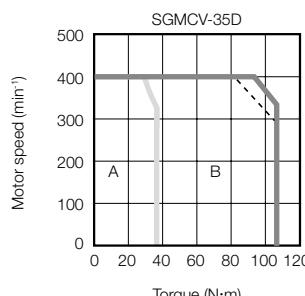

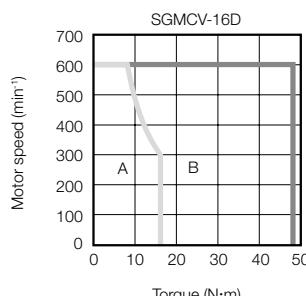

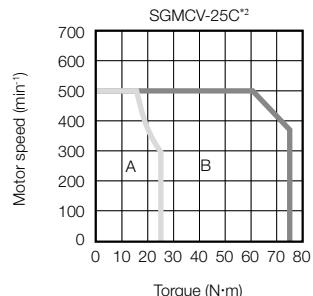

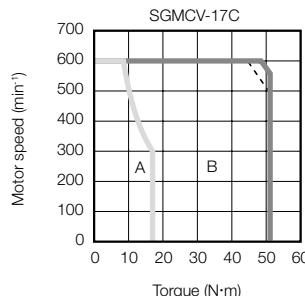

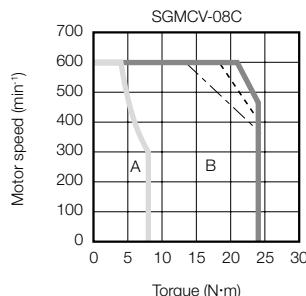

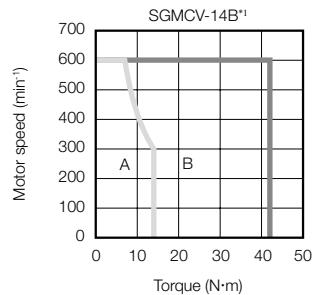

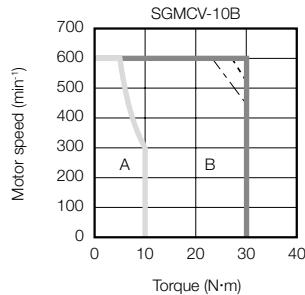

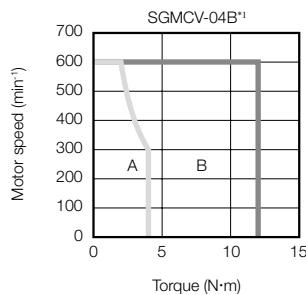

Where F is the external force,  
Thrust load = Load mass  
Moment load = F × L

# Direct Drive Servomotors SGMCV

## Torque-Motor Speed Characteristics

**A** : Continuous duty zone ——— (solid lines): With three-phase 200-V or single-phase 230-V input  
**B** : Intermittent duty zone ----- (dotted lines): With single-phase 200-V input  
 —— (dashed-dotted lines): With single-phase 100-V input

\*1. The characteristics are the same for three-phase 200 V, single-phase 200 V, and single-phase 100 V.

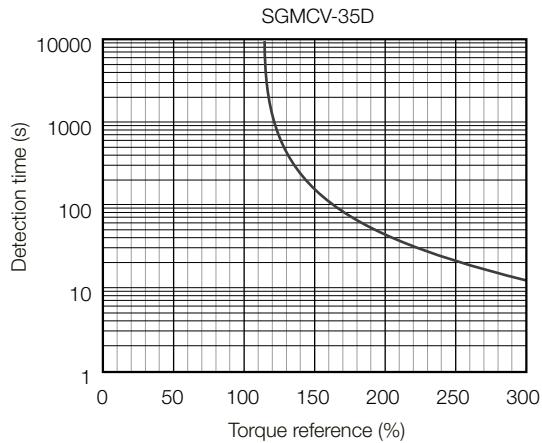

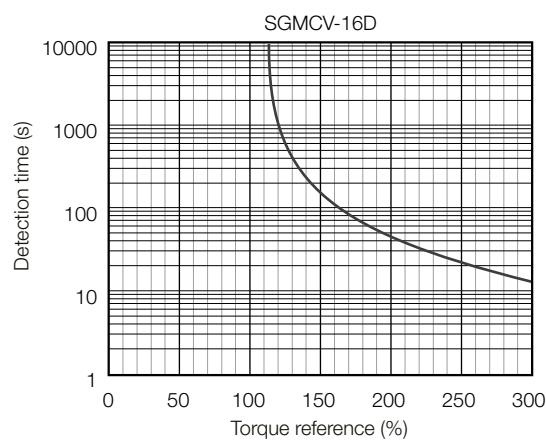

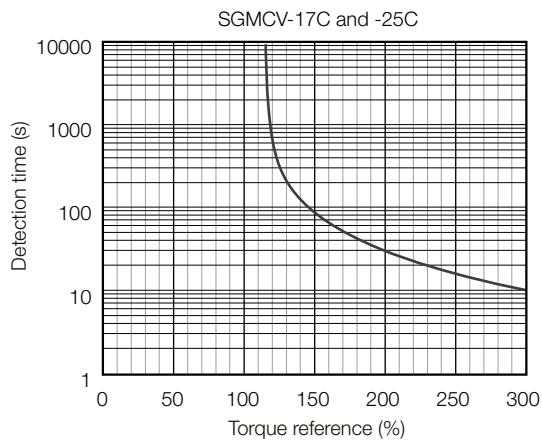

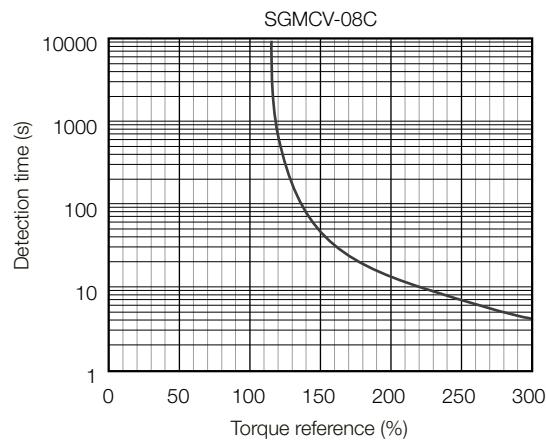

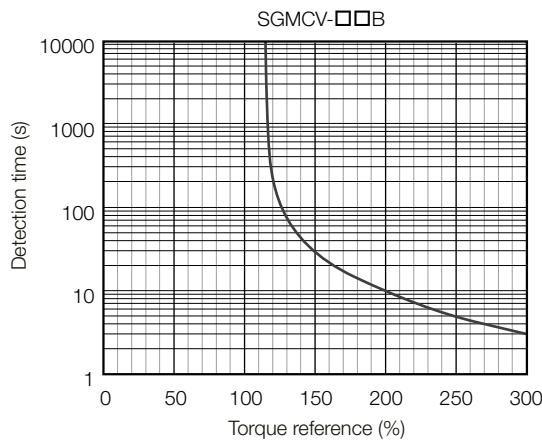

\*2. Contact your YASKAWA representative for information on the SGMCV-25C.

Note:

1. These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.
2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torquemotor speed characteristics will become smaller because the voltage drop increases.

## Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor ambient air temperature of 40°C.

Note: The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.  
Use the Servomotor so that the effective torque remains within the continuous duty zone given in Torque-Motor Speed Characteristics.

## Allowable Load Moment of Inertia

The allowable load moments of inertia (motor moment of inertia ratios) for the Servomotors are given in the Ratings section. The values are determined by the regenerative energy processing capacity of the SERVOPACK and are also affected by the drive conditions of the Servomotor. Perform the required steps for each of the following cases.

Use the SigmaSize+ AC Servo Drive Capacity Selection Program to check the driving conditions. Contact your YASKAWA representative for information on this program.

### Exceeding the allowable Load Moment of Inertia

Use one of the following measures to adjust the load moment of inertia to within the allowable value.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.

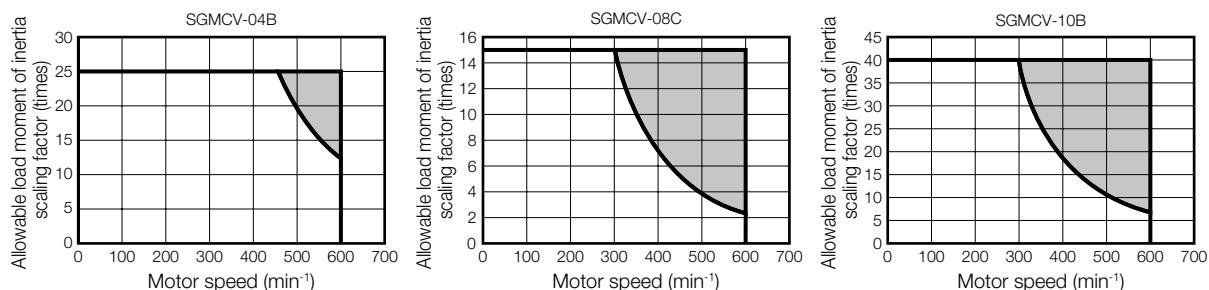

If the above steps are not possible, install an external regenerative resistor.

#### Information

An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Refer to "Built-In Regenerative Resistor" for the regenerative power (W) that can be processed by the SERVOPACKs. Install an External Regenerative Resistor when the built-in regenerative resistor cannot process all of the regenerative power.

### SERVOPACKs without built-in Regenerative Resistors

The following graph shows the allowable load moment of inertia scaling factor of the motor speed (reference values for deceleration operation at or above the rated torque). Application is possible without an external regenerative resistor within the allowable value. However, an External Regenerative Resistor is required in the shaded areas of the graphs.

Note: Applicable SERVOPACK models: SGD7S-2R8A and -2R8F

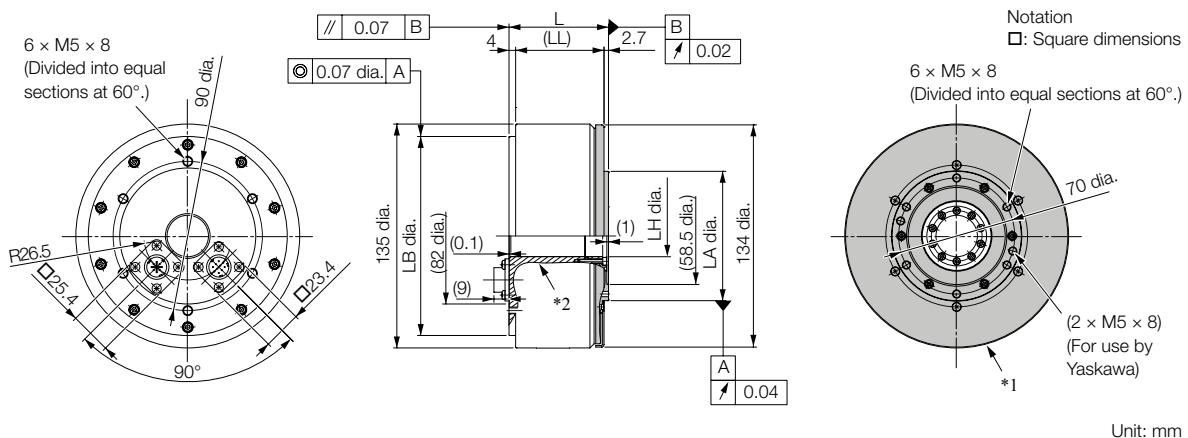

### When an External Regenerative Resistor Is Required

Install the External Regenerative Resistor. Refer to the External Regenerative Resistors section for the recommended products.

## External Dimensions

**SGMCV-□□B**

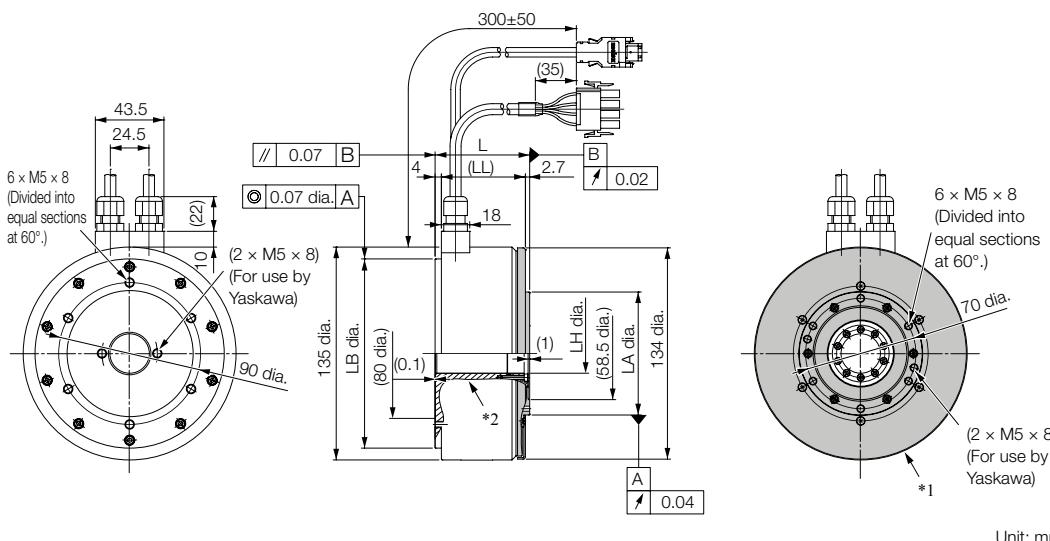

### Flange Specification 1

Note: Values in parentheses are reference dimensions.

Model SGMCV-	L	(LL)	LB	LH	LA	Approx. Mass [kg]

5	PS
6	/PS

Connector Case  
FG (frame ground)  
\* Only absolute-value models with multturn data.  
Model: 55102-0600  
Manufacturer: Molex Japan LLC

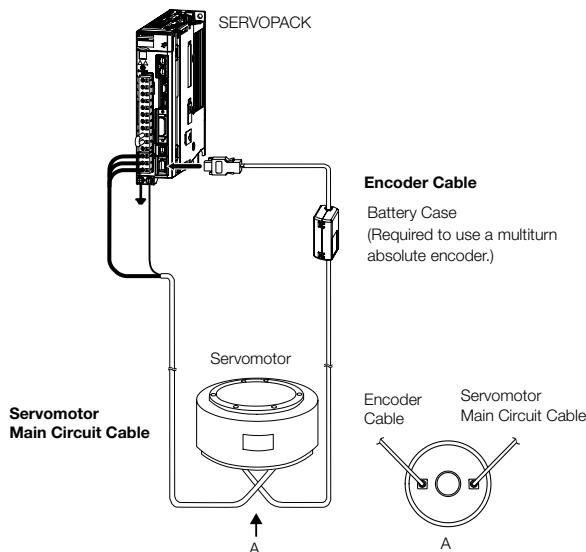

Mating Connector: 54280-0609

## Selecting Cables SGMCV

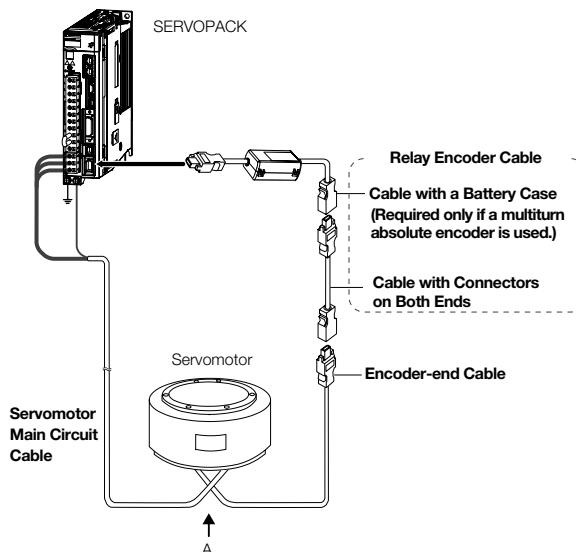

## Cable Configurations

The cables shown below are required to connect a Servomotor to a SERVOPACK.

## **Encoder Cable of 20 m or less**

#### **Encoder Cable of 30 m to 50 m (Relay Cable)**

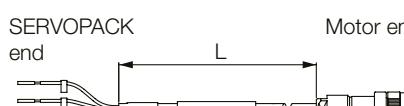

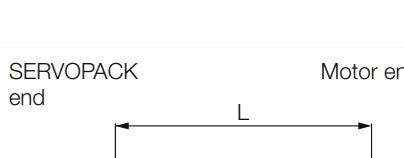

Note:

- Note.

  1. If the Encoder Cable length exceeds 20 m, be sure to use a Relay Encoder Cable.
  2. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torquemotor speed characteristics will become smaller because the voltage drop increases.
  3. Refer to the following manual for the following information.
    - Cable dimensional drawings and cable connection specifications
    - Order numbers and specifications of individual connectors for cables
    - Order numbers and specifications for wiring materials: Sigma 7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEF-S800001\_32)

## Servomotor Main Circuit Cables

Servomotor Model	Length	Order Number		Appearance
		Standard Cable	Flexible Cable*	
SGMCV-□□□	3 m	JZSP-CMM60-03-E	JZSP-C7MDN23-03-E	
	5 m	JZSP-CMM60-05-E	JZSP-C7MDN23-05-E	
	10 m	JZSP-CMM60-10-E	JZSP-C7MDN23-10-E	
	15 m	JZSP-CMM60-15-E	JZSP-C7MDN23-15-E	
	20 m	JZSP-CMM60-20-E	JZSP-C7MDN23-20-E	
SGMCV-□□□	3 m	JZSP-CMM00-03-E	JZSP-C7MDS23-03-E	
	5 m	JZSP-CMM00-05-E	JZSP-C7MDS23-05-E	
	10 m	JZSP-CMM00-10-E	JZSP-C7MDS23-10-E

\*1. Use Flexible Cables for moving parts of machines, such as robots. The recommended bending radius (R) is 68 mm or larger.

\*2. Refer to the Model Designations section for the flange specifications.

\*3. Use one of these Cables if a battery is connected to the host controller.

## Relay Encoder Cables of 30 m to 50 m

Servomotor Model	Description	Length	Order Number*1	Appearance
SGMCV-□□□□	Encoder-end Cable (for single-turn/ multiturn absolute encoder)	0.3m	JZSP-C7PRC0-E	
SGMCV-□□□□	Cables with Connectors on Both Ends (for single-turn/ multiturn absolute encoder)	30m	JZSP-UCMP00-30-E	
		40m	JZSP-UCMP00-40-E	
		50m	JZSP-UCMP00-50-E	
SGMCV-□□□I	Cable with a Battery Case (for multiturn absolute encoder)*3	0.3m	ZSP-CSP12-E	

\*1. Flexible Cables are not available.

\*2. Refer to the Model Designations for the flange specifications.

\*3. Use one of these Cables if a battery is connected to the host controller.

# Linear Servomotors

SGLG (Coreless Models)	206
SGLFW / SGLFW2 (Models with F-Type Iron Cores)	231
SGLT (Models with T-Type Iron Cores)	286
Recommended Linear Encoders & Cables	313

# Linear Servomotors

**Linear Servo Drives contribute to improved machine functionality and performance with exceptional features such as high speed, fast acceleration, long-stroke compatible, constant speed, stability, clean operation, low noise, and low maintenance.**

## Features

### Coreless Model (SGLG)

The lack of magnetic attraction force helps to extend the life of the linear motion guides and minimize operational noise in applications that require high precision with a small force.

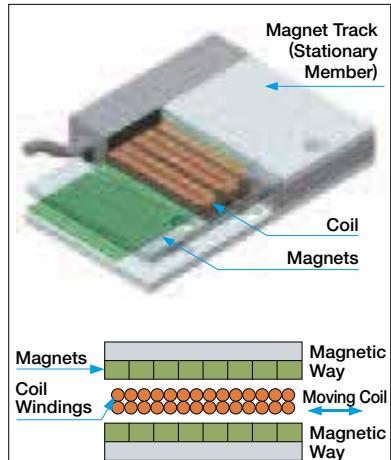

### Model with F-type Iron Cores (SGLF)

The compact profiles of the FW Linear Motors save installation space. The magnetic attraction between the Moving Coil and Magnetic Way allows the linear motion guides to be highly rigid.

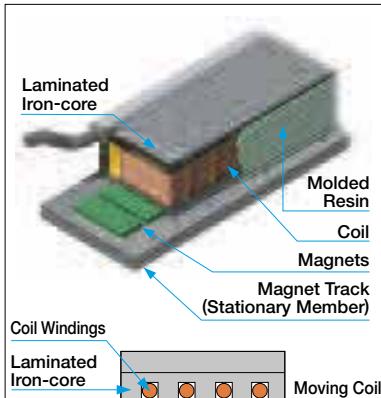

### Model with T-type Iron Cores (SGLT)

Yaskawa's unique structure negates the effects of magnetic attraction. This reduces concerns for the structural strength of the linear motion guides and machinery.

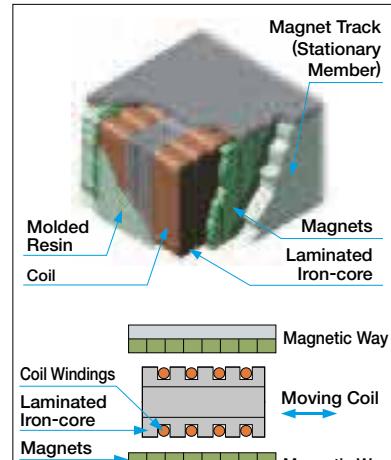

## Structures

- The Moving Coil has no core, and is made of accurately molded resin windings
- The Magnetic Way is made of two facing plates with accurately placed magnets secured on the sides.

- The Moving Coil consists of laminated core and pre-wound coil bobbins inserted into slots located in the laminated core and encapsulated in resin.
- The Magnetic Way is made of a row of magnets accurately placed on the core side of the carrier plate.

- The Moving Coil consists of laminated core and pre-wound coil bobbins inserted into slots located in the laminated core and encapsulated in resin.
- The Magnetic Way is made of a row of magnets accurately placed on carrier plates on both sides of the core.

## Applications

### Multiple heads

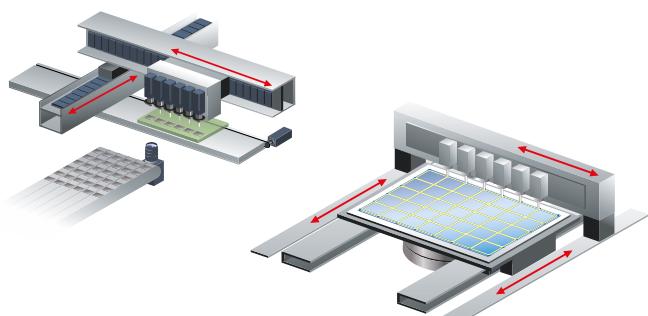

Devices used in LCD and OLED manufacturing (dispensers, inspection equipment, repair equipment, etc.)

### Linear stages (X, Y, θ)

Devices used in LCD and OLED manufacturing (for G5.5 or larger glass substrates and for long strokes) and semiconductor manufacturing devices (probers, etc.)

### Gantries

Devices for electronic parts manufacturing (high-speed chip mounters, etc.)

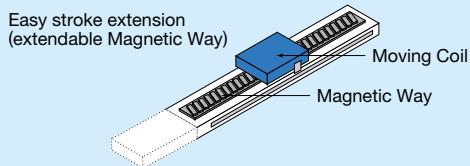

## Benefits of Linear Servomotors

### Linear Drive

#### Benefits 1

- High Speed
- High Precision

#### Speed

A load is directly driven by the Linear Servomotor without any restrictions on the speed.

**This easily enables speeds of up to 5 m/s.**

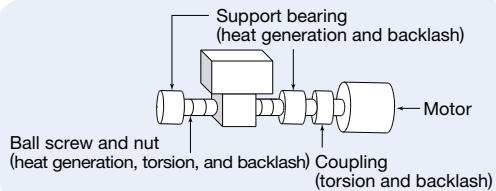

#### Positioning Accuracy

The load is directly driven in a fully-closed loop, enabling submicron positioning control at the sensor resolution.

#### Stroke

A long stroke can be achieved by coupling Magnetic Ways as required.

### Ball Screw Drive

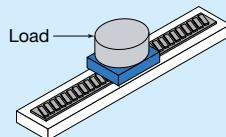

Resonance and heat generation occur at high speeds.

The actual position is likely to deviate from the target position due to torsion and backlash.

A ball screw must be selected according to the stroke length.

#### Benefits 2

- Fast Acceleration
- Simple Structure

#### Acceleration Rate

$$\text{Acceleration rate} = \frac{\text{Force}}{\text{M+m}} \quad \begin{cases} \text{M} = \text{Load mass} \\ \text{m} = \text{Moving Coil mass} \end{cases}$$

The acceleration rate can be increased just by lightening the load.

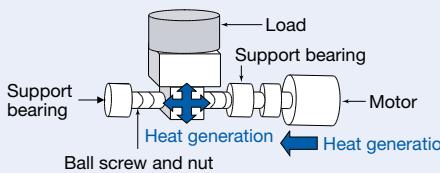

#### Heat Generation

Extremely limited heat transfer to the surroundings allows highly accurate positioning.

#### Extendibility

**Multiple Moving Coil can be mounted to one Magnetic Way.**

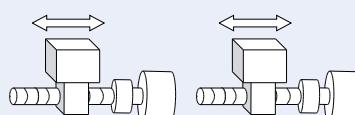

- Simple structure.
- Versatile operations can be performed on the same axis.

$$\text{Acceleration rate} = \frac{\text{Torque}}{\text{J}_L + \text{J}_B + \text{J}_C + \text{J}_M} \quad \begin{cases} \text{J}_L = \text{Load inertia} \\ \text{J}_B = \text{Ball screw inertia} \\ \text{J}_C = \text{Coupling inertia} \\ \text{J}_M = \text{Motor inertia} \end{cases}$$

Lightening the load does not have much impact on increasing the acceleration rate.

The ball screw expands due to the heat generated at different parts, resulting in inconsistent positioning accuracy.

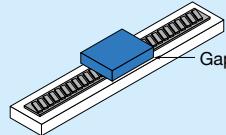

Multiple feeding units are required to perform versatile operations on the same axis.

- Increased costs.
- One ball screw can be used for only one operation.

#### Benefits 3

- Easy Operation

#### Noise

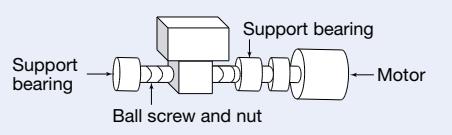

A table that uses a Linear Servomotor has limited mechanical contact areas and therefore **creates minimum operational noise**.

#### Maintenance

A table that uses a Linear Servomotor has limited mechanical contact areas, which greatly reduces the need for maintenance.

#### Clean Environment

The lack of any rotating parts creates a clean manufacturing environment without grease splattering.

High-speed operation is likely to increase noise.

The many mechanical contact areas require periodic maintenance to be performed for lubrication and wear.

Rotating contact areas cause applied grease to splatter, making it difficult to keep a clean manufacturing environment.

## Precautions on Moving Coils with Polarity Sensors

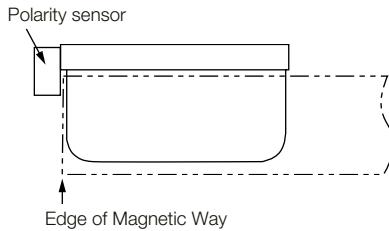

Note

When you use a Moving Coil with a Polarity Sensor, the Magnetic Way must cover the bottom of the polarity sensor. Refer to the example that shows the correct installation. When determining the length of the Moving Coil's stroke or the length of the Magnetic Way, consider the total length (L) of the Moving Coil and the polarity sensor. Refer to the following table.

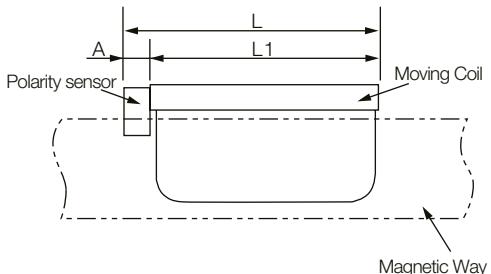

### Correct Installation

### Incorrect Installation

### Total Length of Moving Coil with Polarity Sensor

Moving Coil Model SGLGW-	Length of Moving Coil L1 [mm]	Length of Polarity Sensor A [mm]	Total Length L [mm]

Maximum Allowable Payload (with External Regenerative Resistor and External Dynamic Brake Resistor)*3)	kg	1.7	3.4	5.9	12	18	9.9	19	48	110	190	260
Combined Magnetic Way, SGLGM-		30□□□A		40□□□C□		60□□□C□			90□□□A□			
Combined Serial Converter Unit, JZDP-□□□-		250	251	252	253	254	258	259	260	264	265	266
Applicable SERVOPACKs	SGD7S-	R70A, R70F	R90A	R90A	1R6A, 2R1F	2R8A, 2R8F	1R6A, 2R1F	2R8A, 2R8F	5R5A	120A	180A	200A
	SGD7W- SGD7C-	1R6A			2R8A	1R6A	2R8A	5R5A	–			

\*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

\*2. The rated forces are the continuous allowable force values at a ambient air temperature of 40°C with an aluminum heat sink of the dimensions given in the following table.

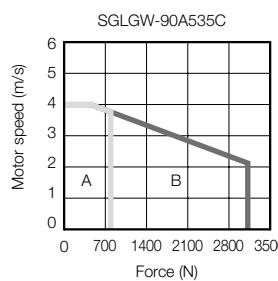

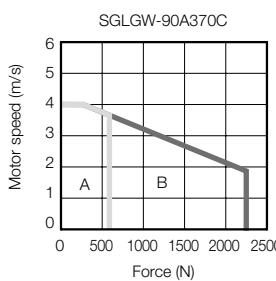

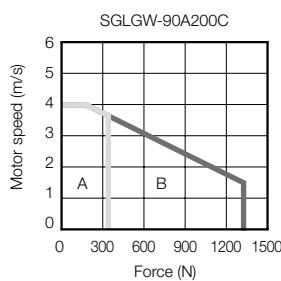

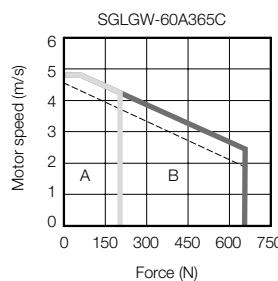

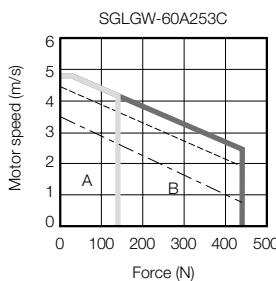

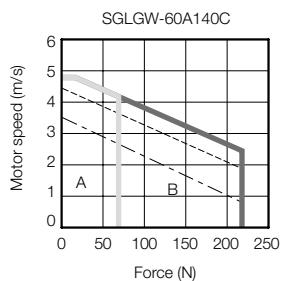

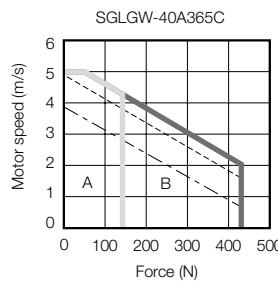

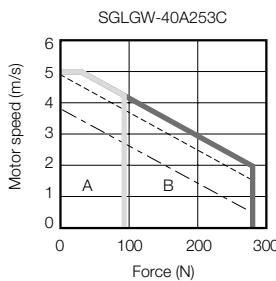

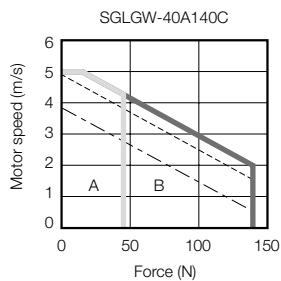

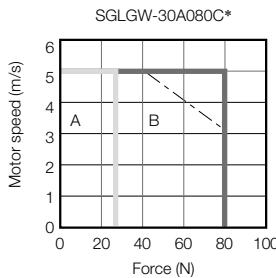

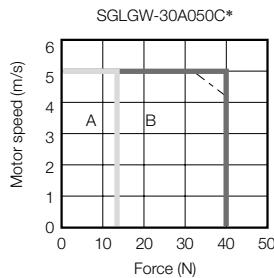

- Heat Sink Dimensions
  - 200 mm × 300 mm × 12 mm: SGLGW-30A050C, -30A080C, -40A140C, and -60A140C
  - 300 mm × 400 mm × 12 mm: SGLGW-40A253C and -60A253C
  - 400 mm × 500 mm × 12 mm: SGLGW-40A365C and -60A365C
  - 800 mm × 900 mm × 12 mm: SGLGW-90A200C, -90A370C, and -90A535C

\*3. To externally connect dynamic brake resistor, select hardware option specification 020 for the SERVOPACK. However, you cannot externally connect dynamic brake resistor if you use the following SERVOPACKs (maximum applicable motor capacity: 400 W).

- SGD7S-R70□□□A020 to -2R8□□□A020
- SGD7W-1R6A20A020 to -2R8A20A020
- SGD7C-1R6AMAA020 to -2R8AMAA020

## Force-Motor Speed Characteristics

**A** : Continuous duty zone ——— (solid lines): With three-phase 200-V input  
**B** : Intermittent duty zone ----- (dotted lines): With single-phase 200-V input  
 —— (dashed-dotted lines): With single-phase 100-V input

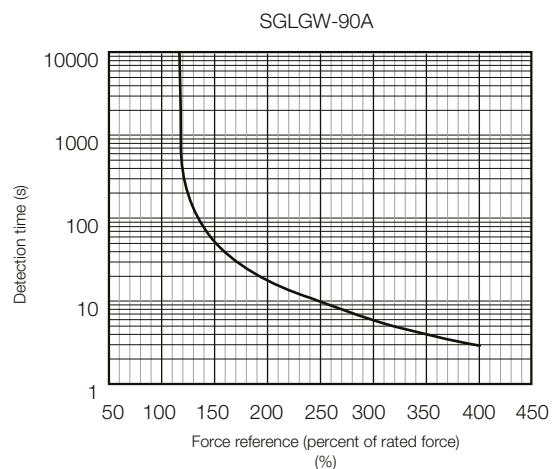

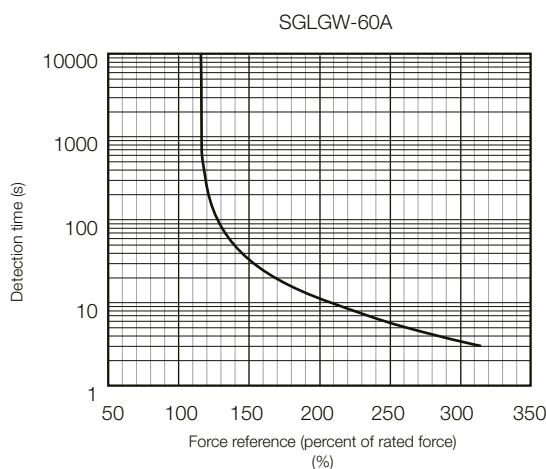

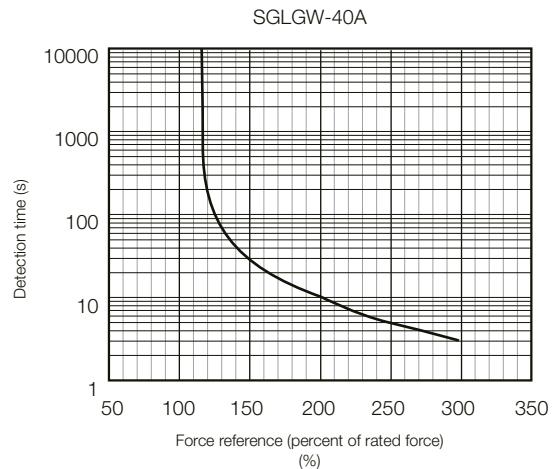

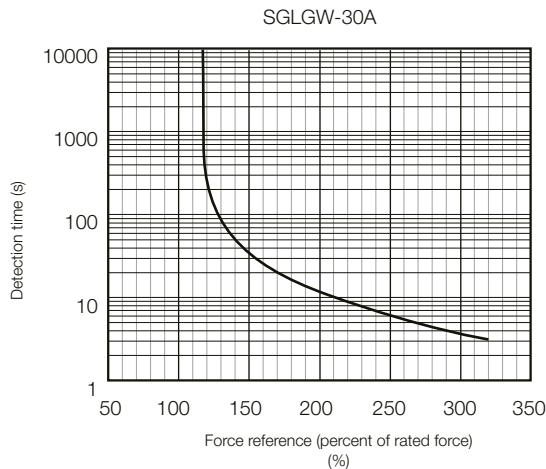

\* The characteristics are the same for three-phase and single-phase.

Note:

1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. These are typical values.
2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If the effective force is within the allowable range for the rated force, the Servomotor can be used within the intermittent duty zone.
4. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

## Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor ambient air temperature of 40°C.

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective force remains within the continuous duty zone given in Force-Motor Speed Characteristics.

Magnetic Attraction	N	0	0	0	0	0	0
Maximum Allowable Payload	kg	12	24	58	18	61	91
Maximum Allowable Payload (With External Regenerative Resistor and External Dynamic Brake Resistor <sup>*3</sup> )	kg	12	24	58	18	61	91
Combined Magnetic Way, SGLGM-		40□□□C□-M			60□□□C□-M		
Combined Serial Converter Unit, JZDP-□□□□-		255	256	257	261	262	263
Applicable SERVOPACKs	SGD7S-	1R6A, 2R1F	2R8A, 2R8F	3R8A	1R6A, 2R1F	3R8A	7R6A
	SGD7W- SGD7C-	1R6A	2R8A	5R5A	1R6A	5R5A	7R6A

\*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

\*2. The rated forces are the continuous allowable force values at a ambient air temperature of 40°C with an aluminum heat sink of the dimensions given in the following table.

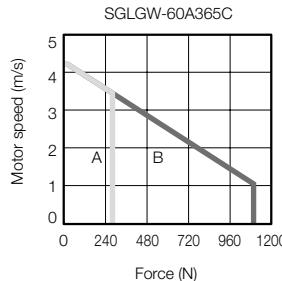

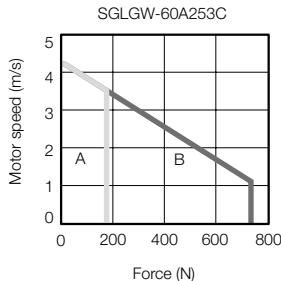

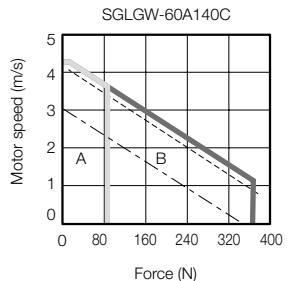

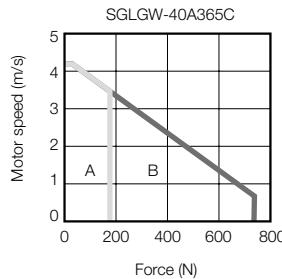

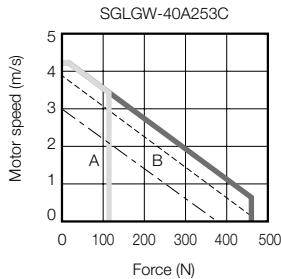

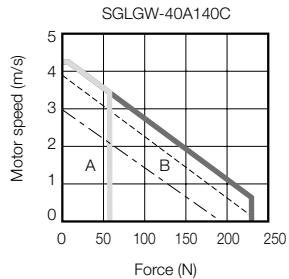

- Heat Sink Dimensions
  - 200 mm × 300 mm × 12 mm: SGLGW-40A140C and -60A140C
  - 300 mm × 400 mm × 12 mm: SGLGW-40A253C and -60A253C
  - 400 mm × 500 mm × 12 mm: SGLGW-40A365C and -60A365C

\*3. To externally connect dynamic brake resistor, select hardware option specification 020 for the SERVOPACK. However, you cannot externally connect dynamic brake resistor if you use the following SERVOPACKs (maximum applicable motor capacity: 400 W).

- SGDTS-R70□□A020 to -2R8□□A020
- SGD7W-1R6A20A020 to -2R8A20A020
- SGD7C-1R6AMAA020 to -2R8AMAA020

## Force-Motor Speed Characteristics

A : Continuous duty zone ——— (solid lines): With three-phase 200-V input  
 B : Intermittent duty zone ----- (dotted lines): With single-phase 200-V input  
 —— (dashed-dotted lines): With single-phase 100-V input

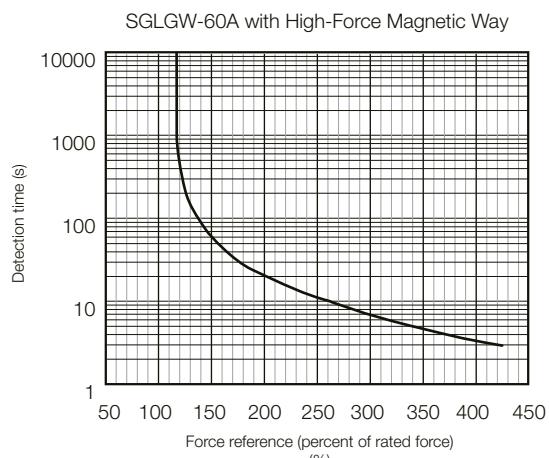

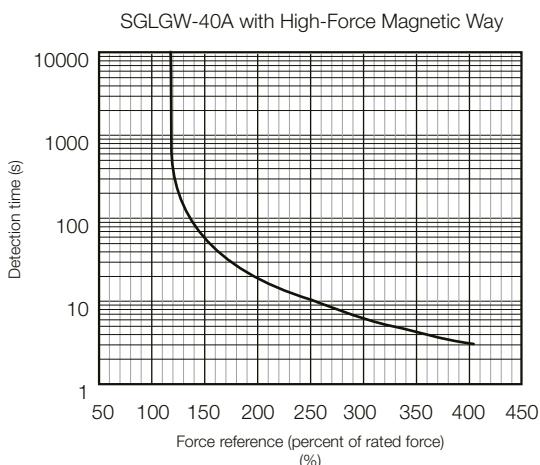

### Note:

- These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. These are typical values.
- The characteristics in the intermittent duty zone depend on the power supply voltage.
- If the effective force is within the allowable range for the rated force, the Servomotor can be used within the intermittent duty zone.
- If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

## Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor ambient temperature of 40°C.

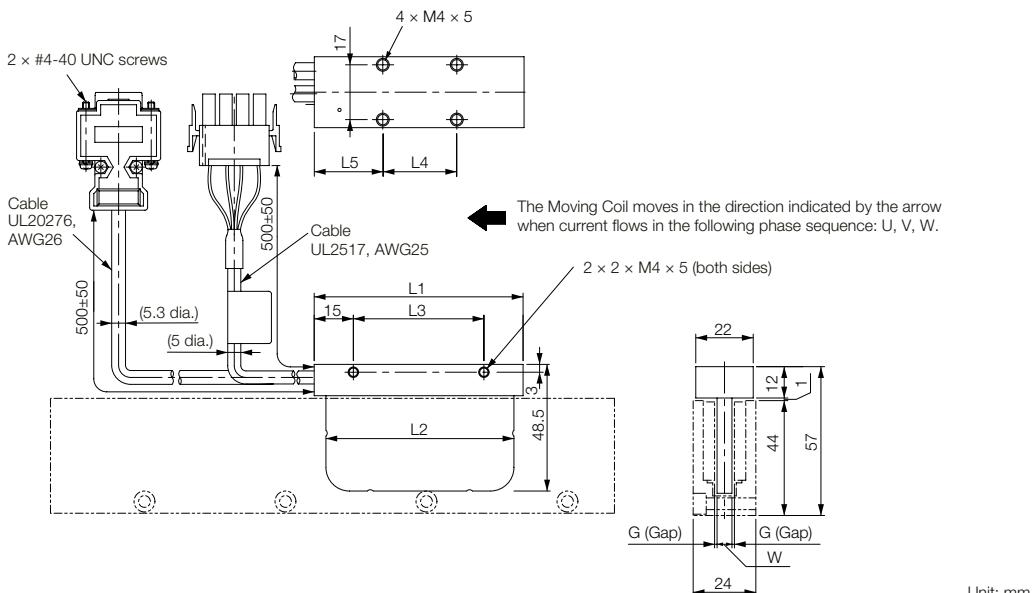

### Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective force remains within the continuous duty zone given in Force-Motor Speed Characteristics.

## Selecting Cables SGLG

### Cable Configurations

To select a Linear Encoder, use Recommended Linear Encoders. Prepare the cable required for the encoder.

\* You can connect directly to an absolute linear encoder.

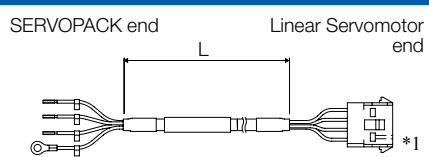

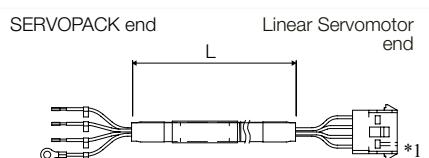

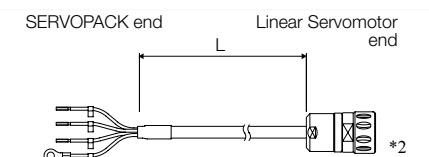

#### Note:

Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables
- Order numbers and specifications for wiring materials

Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

# SGLFW /SGLFW2 (Models with F-Type Iron Cores)

## Model Designations

### Linear Servomotors (Models with F-type Iron Cores)

#### Moving Coil

S G L F W2 - 30 A 070 A T 1 E

Sigma-7 Series  
Linear Servomotors

1st      2nd

3rd + 4th    5th    6th - 8th    9th    10th    11th    12th

digit

#### 1st digit - Servomotor Type

Code	Specification
F	With F-type iron core

#### 2nd digit - Moving Coil/Magnetic Way

Code	Specification
W2	Moving Coil

#### 3rd + 4th digit - Magnet Height

Code	Specification
30	30 mm
45	45 mm
90	90 mm
1D	135 mm

#### 5th digit - Power Supply Voltage

Code	Specification
A	200 VAC

#### 6th ... 8th digit - Length of Moving Coil

Code	Specification
070	70 mm
120	125 mm
200	205 mm
230	230 mm
380	384 mm
560	563 mm

#### 9th digit - Design Revision Order

Code	Specification
A	Standard Model

#### 10th digit - Sensor Specification

Code	Specification
S	With polarity sensor and Thermal Protector
T	Without polarity sensor, with thermal protector

#### 12th digit - Options

Code	Connection
E	Metal round connector (Phoenix)

#### Magnetic Way

S G L F M2 - 30 270 A

Sigma-7 Series  
Linear Servomotors

1st      2nd

3rd + 4th    5th - 7th    8th

digit

#### 1st digit - Servomotor Type

Code	Specification
F	With F-type iron core

#### 2nd digit - Moving Coil/Magnetic Way

Code	Specification
M2	Magnetic Way

#### 3rd + 4th digit - Magnet Height

Code	Specification
30	30 mm
45	45 mm
90	90 mm
1D	135 mm

#### 5th ... 7th digit - Length of Magnetic Way

Code	Specification
270	270 mm
306	306 mm
450	450 mm
510	510 mm
630	630 mm
714	714 mm

#### 8th digit - Design Revision Order

Code	Specification
A	Standard Model

Note: This information is provided to explain model numbers. It is not meant to imply that models are available for all combinations of codes.

## SGLFW (Models with F-type Iron Cores)

### Moving Coil

S G L    F W - 20 A 090 A P □ - E

Sigma-7 Series      1st      2nd      3rd + 4th      5th      6th - 8th      9th      10th      11th      12th      digit

Linear Servomotors

Code	Specification
324	324 mm
405	405 mm
540	540 mm
675	675 mm
756	756 mm
945	945 mm

#### 9th digit - Options

Code	Specification
None	Without options
C	With magnet cover

#### 10th digit

Code	Specifications
E	RoHS II Suffix

Note: This information is provided to explain model numbers. It is not meant to imply that models are available for all combinations of codes.

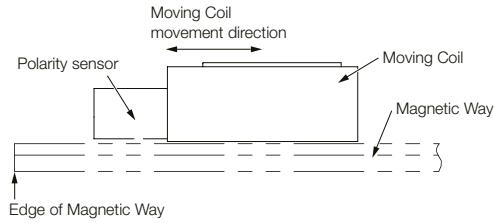

## Precautions on Moving Coils with Polarity Sensors

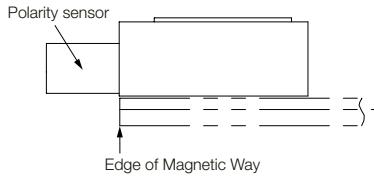

Note

When you use a Moving Coil with a Polarity Sensor, the Magnetic Way must cover the bottom of the polarity sensor. Refer to the example that shows the correct installation. When determining the length of the Moving Coil's stroke or the length of the Magnetic Way, consider the total length (L) of the Moving Coil and the polarity sensor. Refer to the following table.

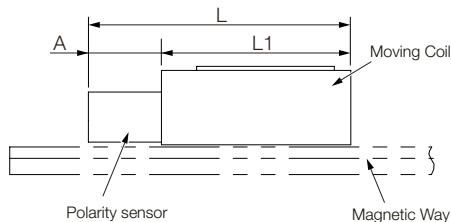

### Correct Installation

### Incorrect Installation

### Total Length of Moving Coil with Polarity Sensor

Moving Coil Model SGLFW2-	Length of Moving Coil, L1 [mm]	Length of Polarity Sensor, A [mm]	Total Length, L [mm]
30A070AS	70		97
30A120AS	125	27	152

Applicable SERVOPACKs	SGD7S-	1R6A, 2R1F		3R8A	2R8A, 2R8F	5R5A	180A
	SGD7W- SGD7C-	1R6A		-	2R8A	5R5A	-

\*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

\*2. The rated forces are the continuous allowable force values at a surrounding air temperature of 40°C with an aluminum heat sink of the dimensions given in the following table.

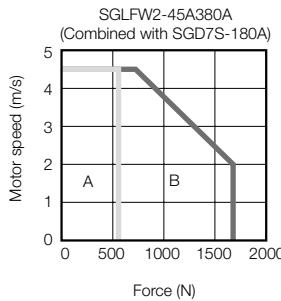

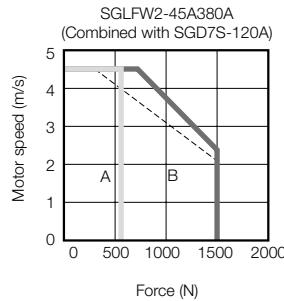

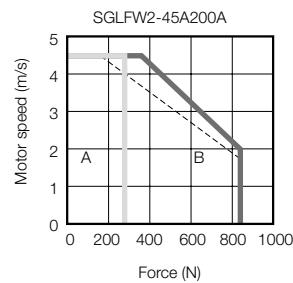

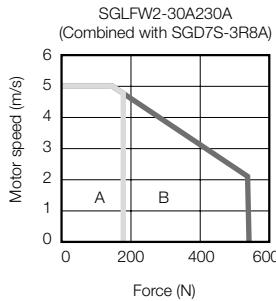

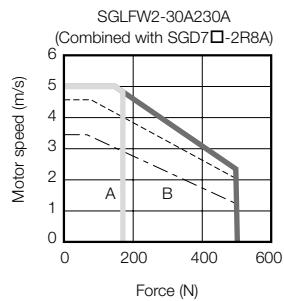

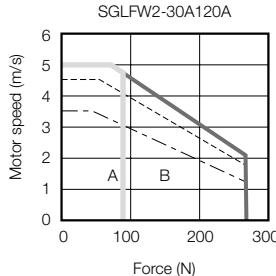

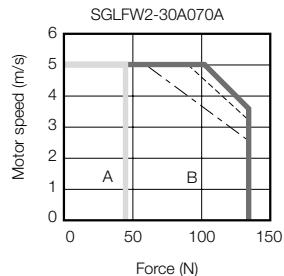

- Heat Sink Dimensions
  - 150 mm × 100 mm × 10 mm: SGLFW2-30A070A
  - 254 mm × 254 mm × 25 mm: SGLFW2-30A120A and -30A230A
  - 400 mm × 500 mm × 25 mm: SGLFW2-45A200A and -45A380A

\*3. To externally connect dynamic brake resistor, select hardware option specification 020 for the SERVOPACK. However, you cannot externally connect dynamic brake resistor if you use the following SERVOPACKs (maximum applicable motor capacity: 400 W).

- SGD7S-R70□□□A020 to -2R8□□□A020
- SGD7W-1R6A20A020 to -2R8A20A020
- SGD7C-1R6AMAA020 to -2R8AMAA020

## Force-Motor Speed Characteristics

**A** : Continuous duty zone ——— (solid lines): With three-phase 200-V input  
**B** : Intermittent duty zone ----- (dotted lines): With single-phase 200-V input  
 —— (dashed-dotted lines): With single-phase 100-V input

Note:

- These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.
- The characteristics in the intermittent duty zone depend on the power supply voltage.
- If the effective force is within the allowable range for the rated force, the Servomotor can be used within the intermittent duty zone.
- If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

\*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

\*2. The rated forces are the continuous allowable force values at a ambient air temperature of 40°C with an aluminum heat sink of the dimensions given in the following table.

- Heat Sink Dimensions

- 400 mm × 500 mm × 25 mm: SGLFW2-90A200A
- 609 mm × 762 mm × 40 mm: SGLFW2-90A380A
- 900 mm × 762 mm × 40 mm: SGLFW2-90A560A and -1DA380A
- 1,400mm × 900 mm × 40 mm: SGLFW2-1DA560A

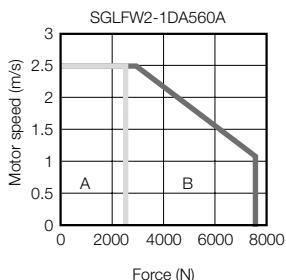

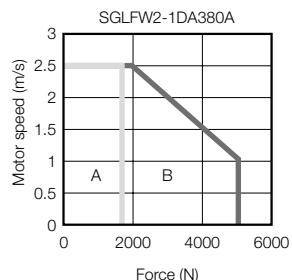

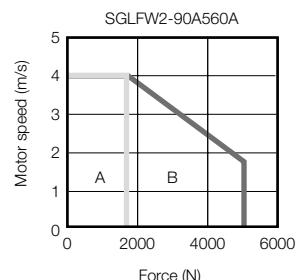

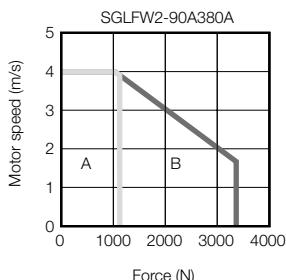

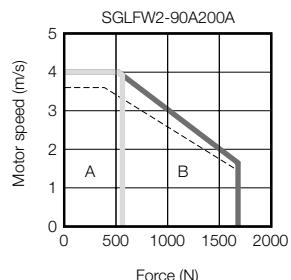

\*3. To externally connect dynamic brake resistor, select hardware option specification 020 for the SERVOPACK.

However, you cannot externally connect dynamic brake resistor if you use the following SERVOPACKs (maximum applicable motor capacity: 400 W).

- SGD7S-R70□□□A020 to -2R8□□□A020
- SGD7W-1R6A20A020 to -2R8A20A020
- SGD7C-1R6AMAA020 to -2R8AMAA020

## Force-Motor Speed Characteristics

[A] : Continuous duty zone ——— (solid lines): With three-phase 200-V input  
 [B] : Intermittent duty zone - - - - (dotted lines): With single-phase 200-V input

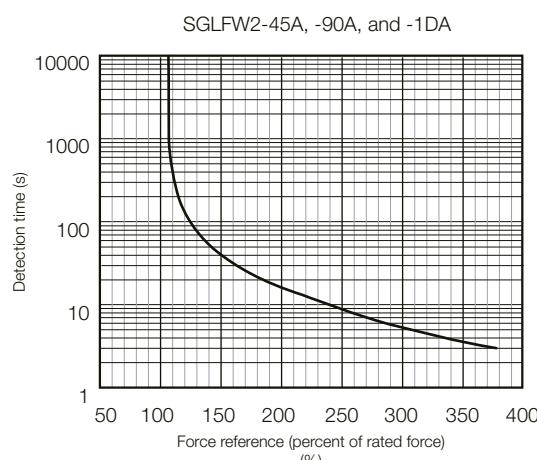

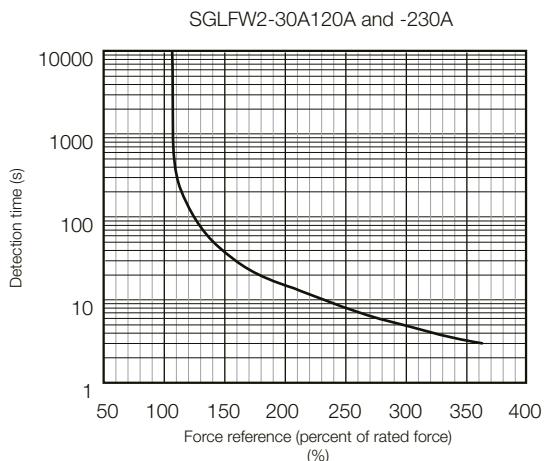

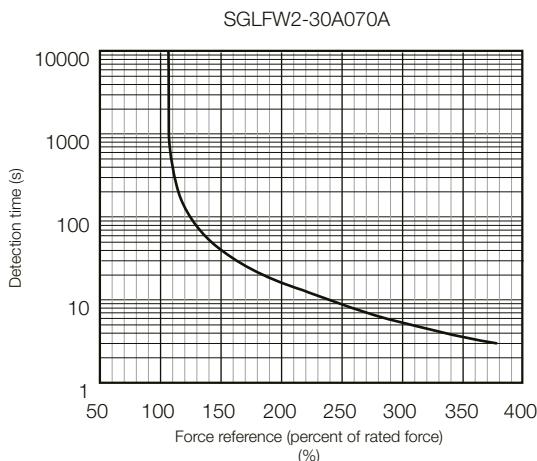

### Note:

1. These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.
2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If the effective force is within the allowable range for the rated force, the Servomotor can be used within the intermittent duty zone.
4. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

## Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor ambient air temperature of 40°C.

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective force remains within the continuous duty zone given in Force-Motor Speed Characteristics.

\*3. To externally connect dynamic brake resistor, select hardware option specification 020 for the SERVOPACK. However, you cannot externally connect dynamic brake resistor if you use the following SERVOPACKs (maximum applicable motor capacity: 400 W).

- SGD7S-R70□□□A020 to -2R8□□□A020
- SGD7W-1R6A20A020 to -2R8A20A020
- SGD7C-1R6AMAA020 to -2R8AMAA020

## Force-Motor Speed Characteristics

**A** : Continuous duty zone ——— (solid lines): With three-phase 200-V input  
**B** : Intermittent duty zone ----- (dotted lines): With single-phase 200-V input  
 —— (dashed-dotted lines): With single-phase 100-V input

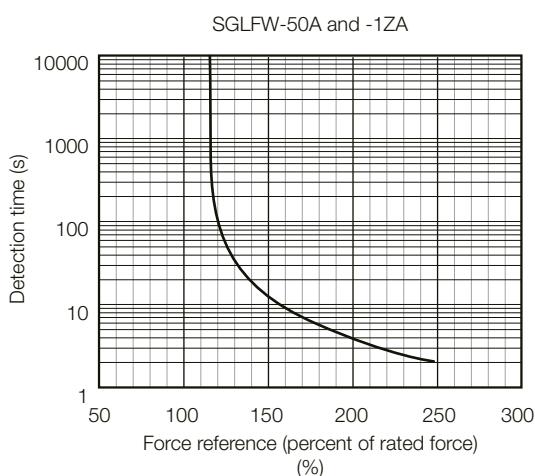

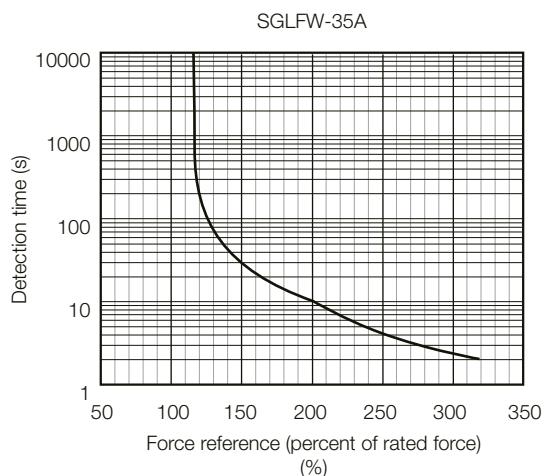

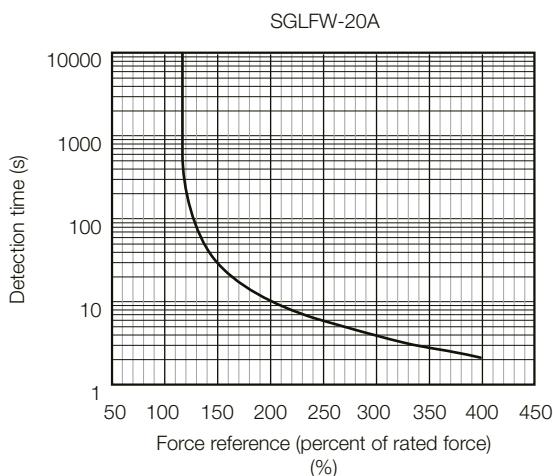

### Note:

1. These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.
2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If the effective force is within the allowable range for the rated force, the Servomotor can be used within the intermittent duty zone.
4. If you use a Servomotor Main Circuit Cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

## Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor ambient air temperature of 40°C.

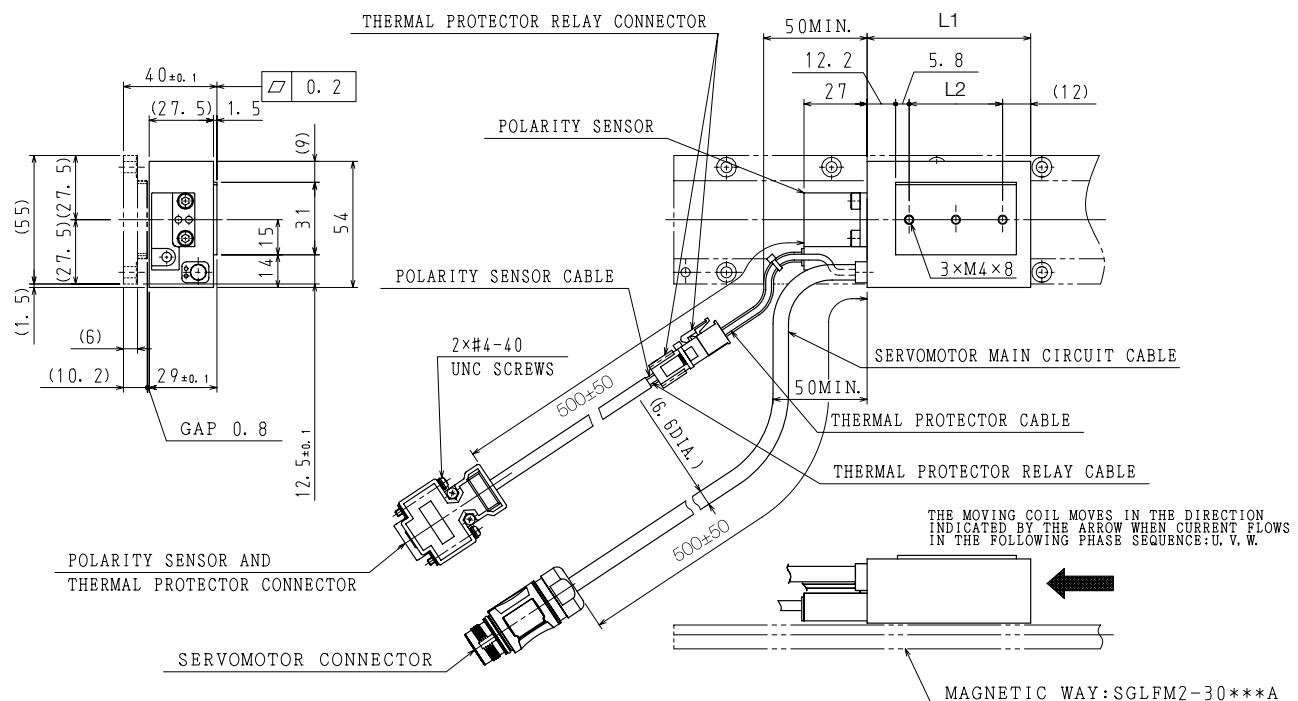

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective force remains within the continuous duty zone given in Force-Motor Speed Characteristics.

## External Dimensions

Pin connector: 17JE-23090-02 (D8C)-CG  
From DDK Ltd.

#### Mating Connector

Socket connector: 17JE-13090-02 (D8C)A-CG

Studs: 17L-002C or 17L-002C1

### Polarity Sensor Output Signal

The figure on the right shows the relationship between the Su, Sv, and Sw polarity sensor output signals and the inverse power of each motor phase Vu, Vv, and Vw when the Moving Coil moves in the direction indicated by the arrow in the dimensional drawings of the Moving Coil.

### Moving Coils: SGLFW-35A□□□A□D-E

①SGLFW-35A120A□D-E

②SGLFW-35A230A□D-E

Unit: mm

Moving Coil Model SGLFW-	L1	L2	L3	Approx. Mass [kg]
35A120A□D	127	72	108	1.3
35A230A□D	235	180	216	2.3

Note:

The above dimensional drawing gives the dimensions for both models with polarity sensors and models without polarity sensors.

## Connector Specifications

### Servomotor Connector

1	Phase U	5	Not used
2	Phase V	6	
4	Phase W	⊖	Ground

Extension: ARRA06AMRPN182  
Pins: 021.279.1020  
From Interconnection GmbH  
**Mating Connector**  
Plug: APRA06BFRDN170  
Socket: 020.105.1020

### Polarity Sensor Connector

## Selecting Cables SGLF

### Cable Configurations

To select a Linear Encoder, use Recommended Linear Encoders. Prepare the cable required for the encoder.

\* You can connect directly to an absolute linear encoder.

#### Note:

Refer to the following manual for the following information.

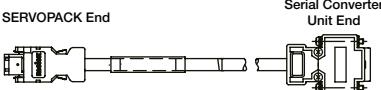

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables
- Order numbers and specifications for wiring materials

Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

E	RoHS II Suffix

\* The SGLTM-35□□□HO (high-efficiency models) do not support this specification.

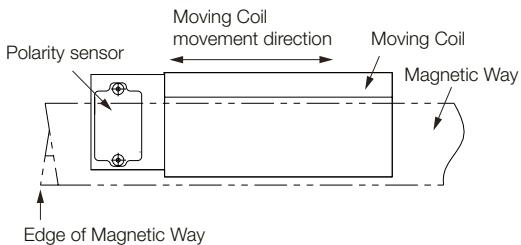

## Precautions on Moving Coils with Polarity Sensors

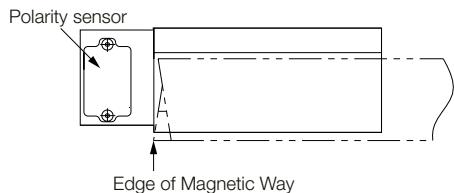

Note

When you use a Moving Coil with a Polarity Sensor, the Magnetic Way must cover the bottom of the polarity sensor. Refer to the example that shows the correct installation. When determining the length of the Moving Coil's stroke or the length of the Magnetic Way, consider the total length of the Moving Coil and the polarity sensor. Refer to the following table.

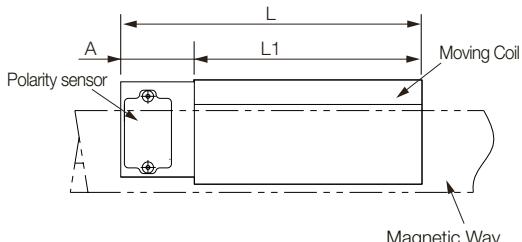

### Correct Installation

### Incorrect Installation

### Total Length of Moving Coil with Polarity Sensor

Moving Coil Model SGLTW-	Length of Moving Coil, L1 [mm]	Length of Polarity Sensor, A [mm]	Total Length, L [mm]

Combined Serial Converter Unit, JZDP-□□□□-		011	012	013	014	015	016	185	186	187	188	105	106	108	109
Applicable SERVOPACKs	SGD7S-	3R8A	7R6A	120A	5R5A	120A	180A	180A	330A	330A	550A	5R5A	120A	5R5A	120A
	SGD7W- SGD7C-	5R5A	7R6A	-	5R5A	-	-	-	-	-	-	5R5A	-	5R5A	-

\*1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

\*2. The rated forces are the continuous allowable force values at a ambient air temperature of 40°C with an aluminum heat sink of the dimensions given in the following table.

- Heat Sink Dimensions

- 254 mm × 254 mm × 25 mm: SGLTW-20A170A and -35A170A
- 400 mm × 500 mm × 40 mm: SGLTW-20A320A -20A460A, -35A170H, -35A320A, -35A320H, -35A460A, and -50A170H
- 609 mm × 762 mm × 50 mm: SGLTW-40A400B, -40A600B, -50A320H, -80A400B, and -80A600B

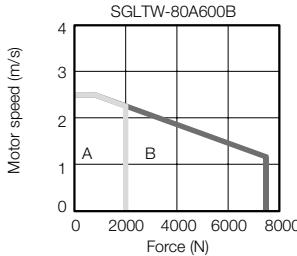

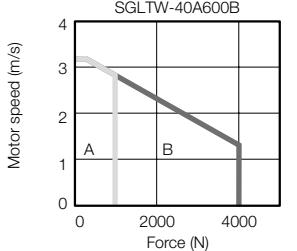

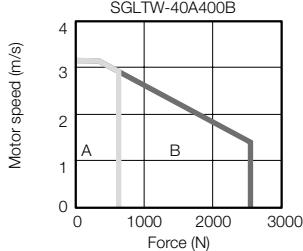

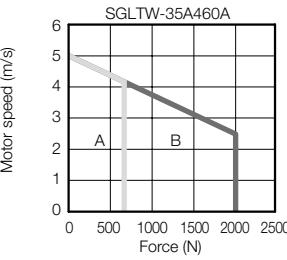

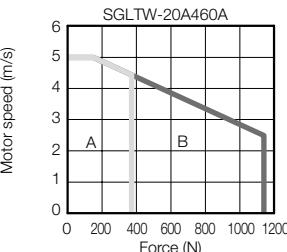

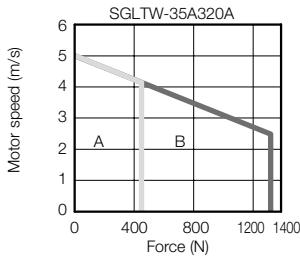

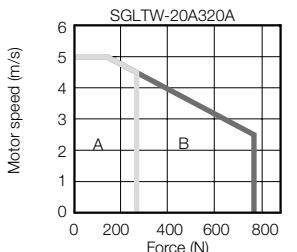

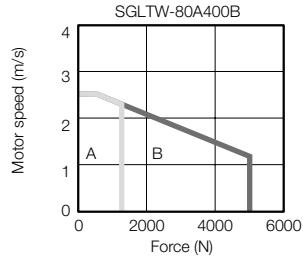

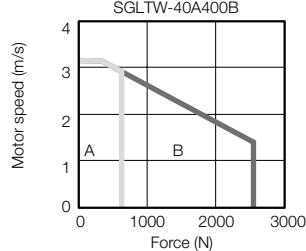

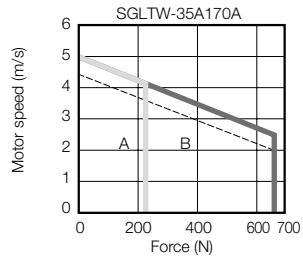

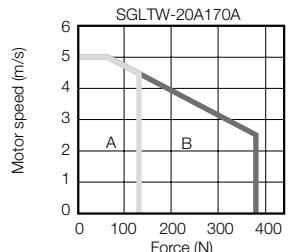

\*3. The unbalanced magnetic gap that results from the Moving Coil installation condition causes a magnetic attraction on the Moving Coil.

\*4. The value that is given is the magnetic attraction that is generated on one side of the Magnetic Way.

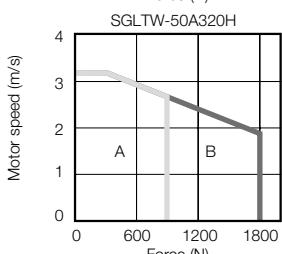

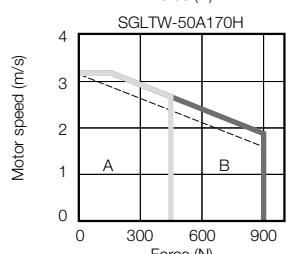

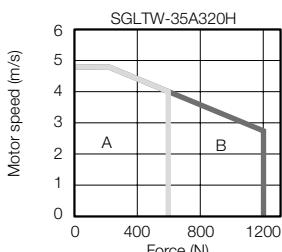

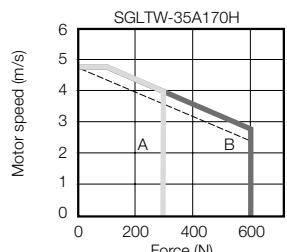

## Force-Motor Speed Characteristics

[A] : Continuous duty zone ——— (solid lines): With three-phase 200-V input  
 [B] : Intermittent duty zone ----- (dotted lines): With single-phase 200-V input

### Standard Models

### High-efficiency Models

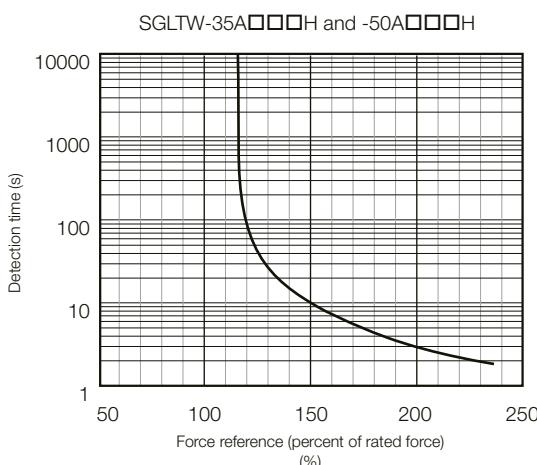

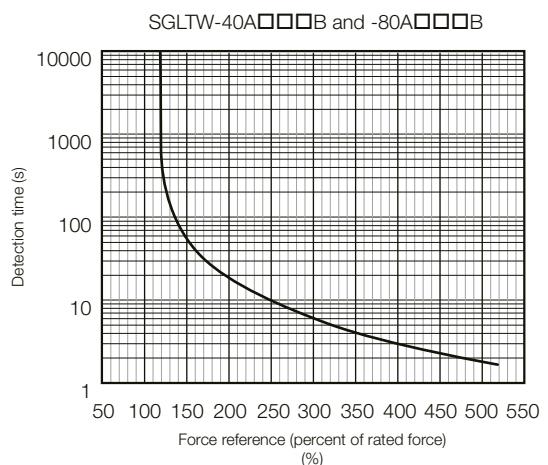

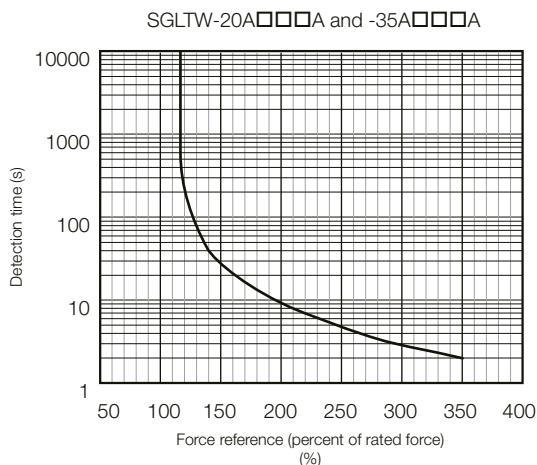

Note:

- These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.
- The characteristics in the intermittent duty zone depend on the power supply voltage.
- If the effective force is within the allowable range for the rated force, the Servomotor can be used within the intermittent duty zone.
- If you use the Servomotor with a power supply voltage lower than the rated voltage, the effective force in the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

## Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a Servomotor ambient air temperature of 40°C.

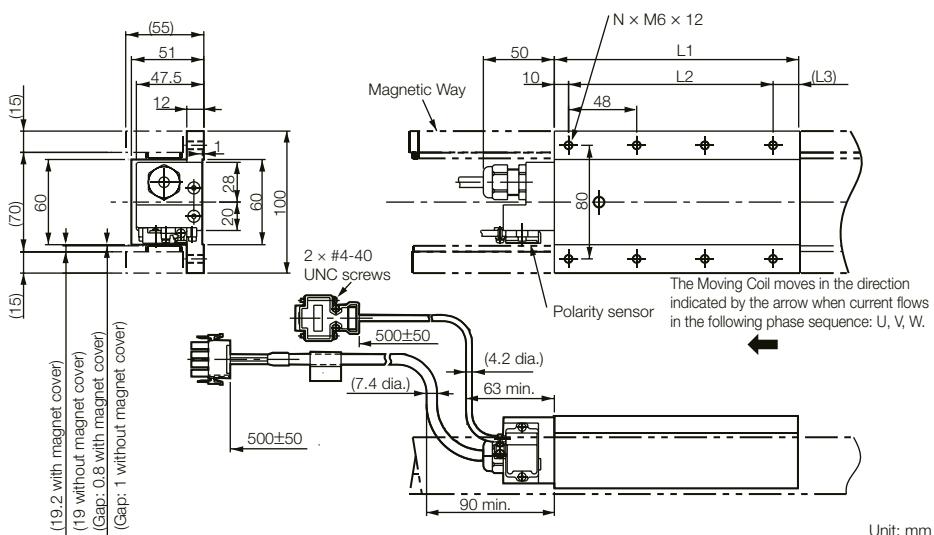

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the Servomotor so that the effective force remains within the continuous duty zone given in Force-Motor Speed Characteristics.

## External Dimensions

### SGLTW-20: Standard Models

Studs: 17L-002C or 17L-002C1

## Magnetic Ways: SGLTM-20□□□A-E

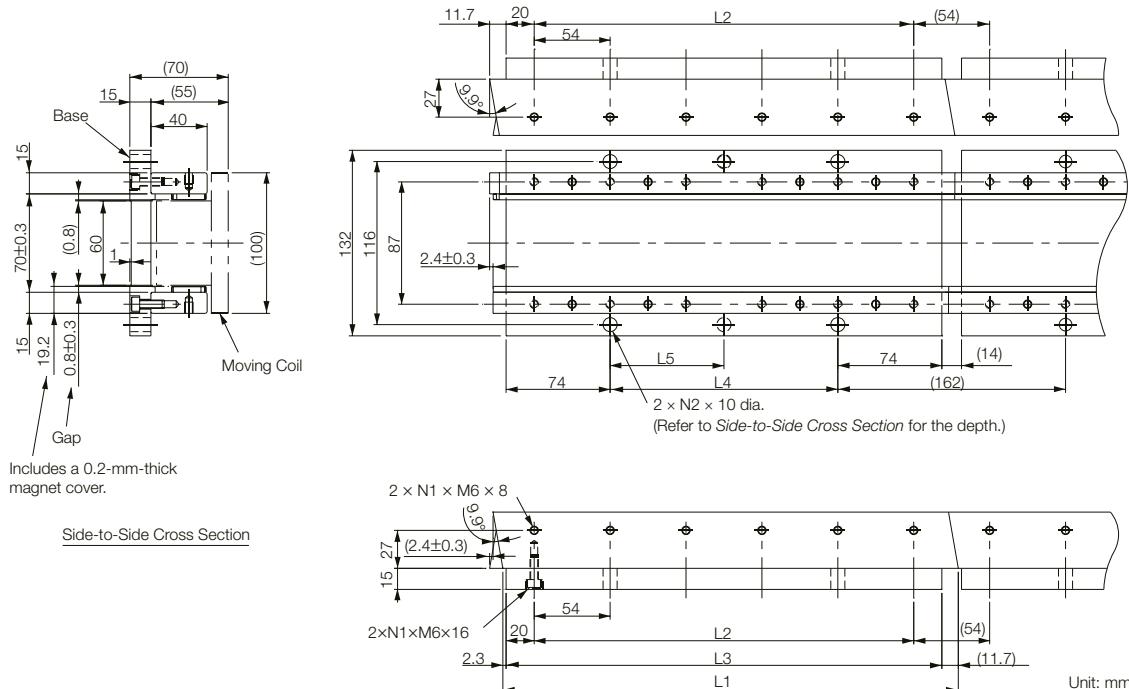

## Note:

- Two Magnetic Way tracks are used together as a set. For safety, when they are shipped, the two tracks are secured to a mounting spacer made from aluminum.
- More than one Magnetic Way can be connected.
- Dimensions with asterisks are the distances between the Magnetic Way tracks. Install the tracks according to the specified dimensions. Observe the dimensions given in Mounting Section Details after installation.
- Dimensions when the Magnetic Way is shipped from the factory are indicated by ♠.
- Use socket head screws of strength class 10.9 or higher for the Magnetic Way mounting screws. (Do not use stainless steel screws.)

Magnetic Way SGLTM-	L1	L2	LA	LB	LC	LD	N	Approx. Mass [kg]
20324A□	$324^{+0.1}_{-0.3}$	270 (54 × 5)	$31.7^{+0}_{-0.2}$	$13.7^{+0}_{-0.2}$	$40.3^{+0}_{-0.2}$	$62^{+0.6}_{0}$	6	3.4

## Magnetic Ways: SGLTM-50□□□H□-E

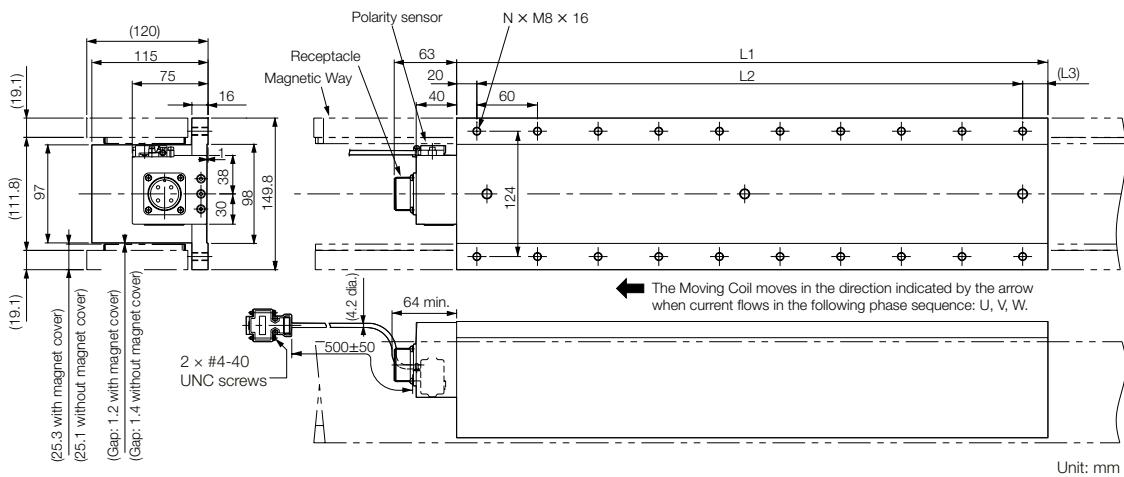

### Note:

- Two Magnetic Way tracks are used together as a set. For safety, when they are shipped, the two tracks are secured to a mounting spacer made from aluminum.
- More than one Magnetic Way can be connected.
- Dimensions with asterisks are the distances between the Magnetic Way tracks. Install the tracks according to the specified dimensions. Observe the dimensions given in Mounting Section Details after installation.
- Dimensions when the Magnetic Way is shipped from the factory are indicated by ♠.
- Use socket head screws of strength class 10.9 or higher for the Magnetic Way mounting screws. (Do not use stainless steel screws.)

Magnetic Way Model SGLTM-	L1	L2	LA	LB	LC	LD	N	Approx. Mass [kg]
50324H□	324 <sup>-0.1</sup> <sub>-0.3</sub>	270 (54 × 5)	27 <sup>0</sup> <sub>-0.2</sub>	9 <sup>0</sup> <sub>-0.2</sub>	45 <sup>0</sup> <sub>-0.2</sub>	82 <sup>+0.6</sup> <sub>0</sub>	6	8

## Selecting Cables SGLT

### Cable Configurations

To select a Linear Encoder, use Recommended Linear Encoders. Prepare the cable required for the encoder.

\* You can connect directly to an absolute linear encoder.

#### Note:

Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables
- Order numbers and specifications for wiring materials  
Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

# Recommended Linear Encoders & Cables

## Recommended Linear Encoders

### Incremental Linear Encoders

#### 1 V<sub>p-p</sub> Analog Voltage

You must also use a YASKAWA Serial Converter Unit. The output signal will be multiplied by 8 bits (256 divisions) or 12 bits (4,096 divisions) in the Serial Converter Unit.

Manufacturer	Linear Encoder Type	Model			Linear Encoder Pitch [μm]	Resolution [nm]	Maximum Speed <sup>*1</sup> [m/s]	Support for Polarity Sensor Input	Application to Linear Servomotors	Application to Fully-Closed Loop Control
		Scale	Sensor Heard	Relay Device between SERVOPACK and Linear Encoder <sup>*3</sup>						
Heidenhain Corporation	Exposed	LIDA48□		JZDP-H003/-H006	20	78.1	5	✓	✓	✓
		JZDP-J003/-J006				4.9	2	✓	✓	*4

✓: Applicable

\*1. The maximum speeds given in the above table are the maximum applicable speeds of the encoders when combined with a YASKAWA SERVOPACK.

The actual speed will be restricted by either the maximum speed of the Linear Servomotor or the maximum speed of the Linear Encoder (given above).

\*2. If you use the origin signals with a Linear Encoder from Renishaw plc, the origin may sometimes be falsely detected.

If that occurs, use the BID/DIR signal to output the origin signal only in one direction.

\*3. These are the models of Serial Converter Units.

\*4. Contact your YASKAWA representative.

Note: Confirm detailed specifications, such as the tolerances, dimensions, and operating environment, with the manufacturer of the Linear Encoder before you use it.

#### Encoder for YASKAWA Serial Interface

The multiplier (number of divisions) depends on the Linear Encoder. Also, you must write the Servomotor constant file to the Linear Encoder in advance.

Manufacturer	Linear Encoder Type	Model			Linear Encoder Pitch [μm]	Resolution [nm]	Maximum Speed <sup>*1</sup> [m/s]	Support for Polarity Sensor Input	Application to Linear Servomotors	Application to Fully-Closed Loop Control

\*1. These are reference values for setting SERVOPACK parameters. Contact the manufacturer for actual linear encoder scale pitches.

\*2. The maximum speeds given in the above table are the maximum applicable speeds of the encoders when combined with a YASKAWA SERVOPACK.

The actual speed will be restricted by either the maximum speed of the Linear Servomotor or the maximum speed of the Linear Encoder (given above).

\*3. Contact Mitutoyo Corporation for details on the Linear Encoders.

\*4. The speed is restricted for some SERVOPACKS.

\*5. This is the model of the Interpolator.

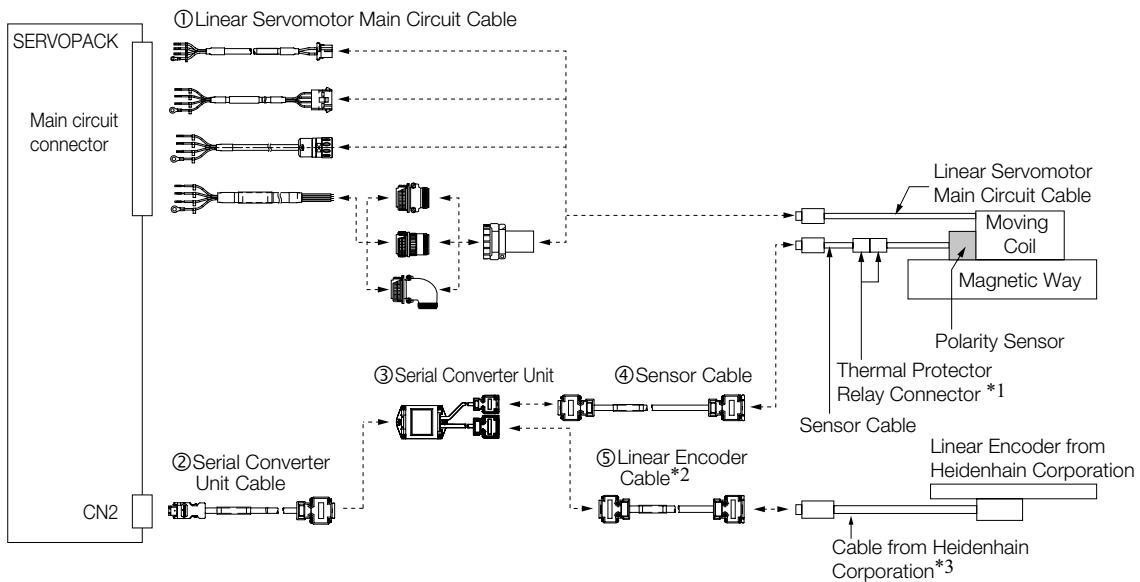

Note: Confirm detailed specifications, such as the tolerances, dimensions, and operating environment, with the manufacturer of the Linear Encoder before you use it.

## Connections to Linear Encoder from Heidenhain Corporation

### Connections for a 1 Vp-p Analog Voltage Output Signal

You must make the connections through a YASKAWA Serial Converter Unit. The output signal will be multiplied by 8 bits (256 divisions) or 12 bits (4,096 divisions) in the Serial Converter Unit.

#### Connecting to a Linear Servomotor with a Polarity Sensor

\*1. Only SGLFW2 Servomotors come equipped with Thermal Protector Relay Connectors.

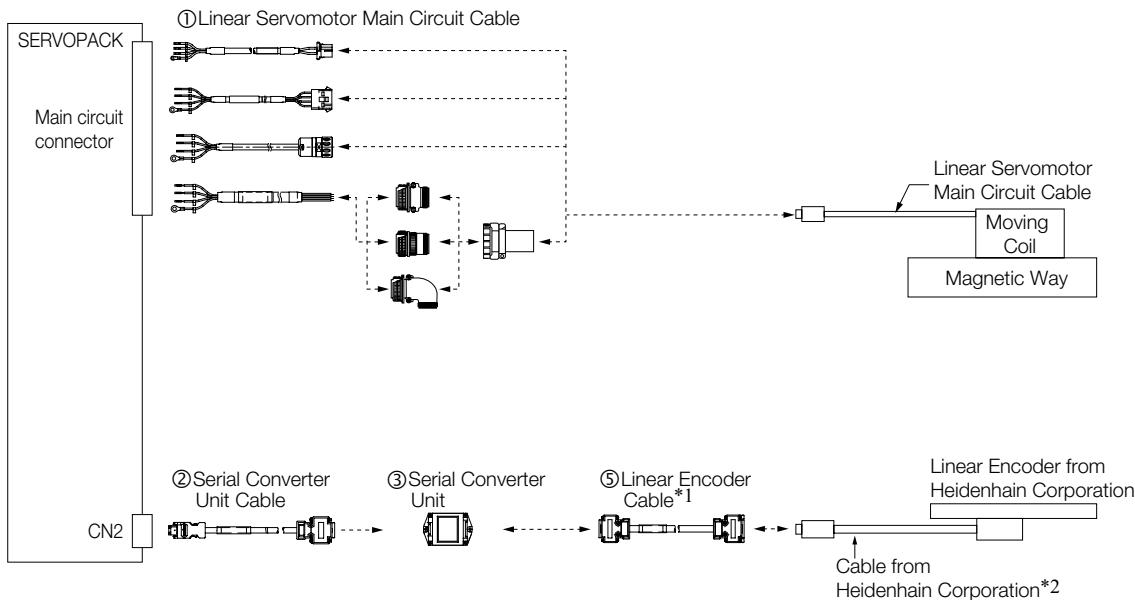

\*2. When using a JZDP-J00□-□□□ Serial Converter Unit, do not use a YASKAWA Linear Encoder Cable that is longer than 3 m.

\*3. Contact Heidenhain Corporation for details on cables (analog 1 Vp-p output, D-sub 15-pin, male) from Heidenhain Corporation.

# Recommended Linear Encoders & Cables

## Connecting to a Linear Servomotor without a Polarity Sensor

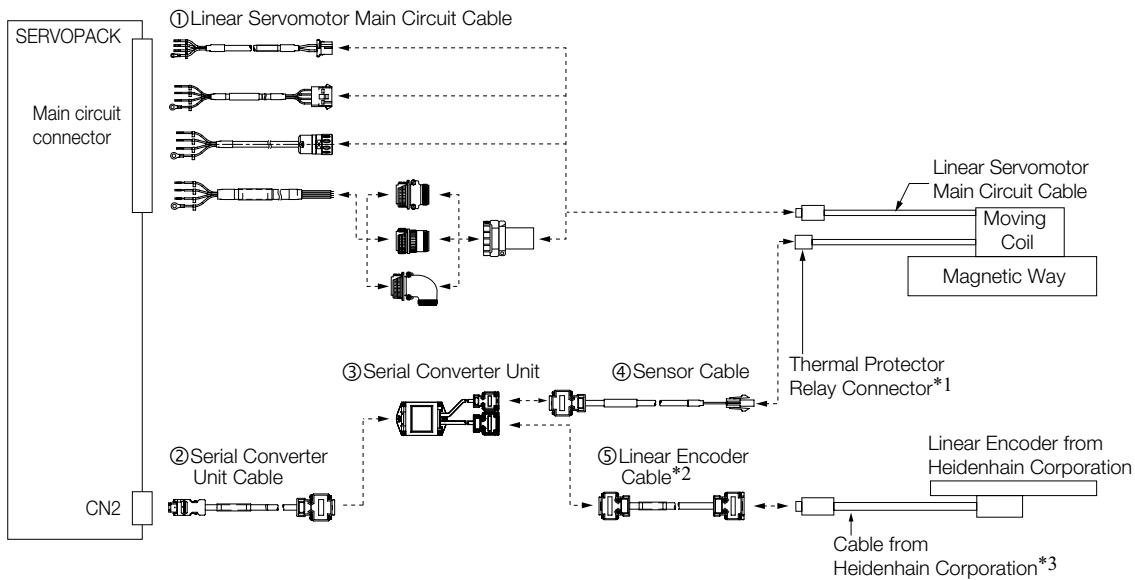

Servomotors other than the SGLFW2

\*1. When using a JZDP-J00□-□□□ Serial Converter Unit, do not use a YASKAWA Linear Encoder Cable that is longer than 3 m.

\*2. Contact Heidenhain Corporation for details on cables (analog 1 Vp-p output, D-sub 15-pin, male) from Heidenhain Corporation.

\* Use Flexible Cables for moving parts of machines, such as robots. The recommended bending radius (R) is 68 mm or larger.

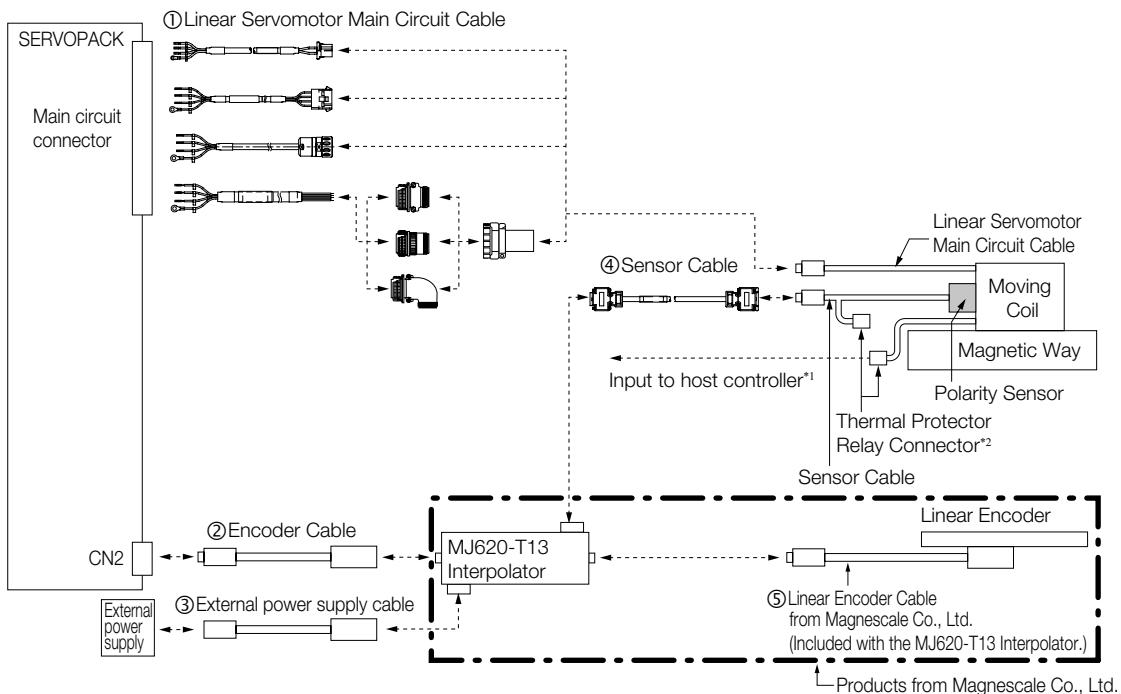

## Recommended Linear Encoders & Cables

### SL7□0 Linear Encoder, PL101 Sensor Head, and MJ620-T13 Interpolator

Important

1. A 5-VDC power supply is required for the MJ620-T13. (The 5-VDC power supply is not provided by YASKAWA.)
2. Refer to the MJ620-T13 specifications from Magnescale Co., Ltd. for the current consumption of the MJ620-T13.
3. If you use an SGLFW2 Servomotor, remove the thermal protector relay connector and input the thermal protector signal from the Linear Servomotor to the host controller. The thermal protector signal is closed when the temperature is normal and open when the thermal protector is activated. Do not exceed 3 A or 30 V.

\*1. Cables to connect to the host controller are not provided by YASKAWA. Refer to the following manual for information on connector models.  
Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

\*2. Only SGLFW2 Servomotors come equipped with Thermal Protector Relay Connectors.

No.	Cable Type
①	Linear Servomotor Main Circuit Cable
②	Encoder Cable
③	External Power Supply Cable
④	Sensor Cable
⑤	Linear Encoder Cable from Magnescale Co., Ltd. (Included with the MJ620-T13 Interpolator.)

# Recommended Linear Encoders & Cables

## Encoder Cables

These cables are not provided by YASKAWA. Use a shielded cable. Refer to the following tables for the pin layouts.

### SERVOPACK End of Cable (CN2)

- Plug Connector: 55100-0670 (Molex Japan LLC)
- Connector order number: JZSP-CMP9-1-E (SERVOPACK Connector Kit)

Pin	Signal	Function
1	PG+5V	Encoder power supply +5 V
2	PG0V	Encoder power supply 0 V
3	–	–
4	–	–
5	PS	Serial data
6	/PS	
Shell	Shield	–

### MJ620-T13 End of Cable

For details, refer to the specifications for the MJ620-T13 from Magnescale Co., Ltd..

- Receptacle: PCR-E20LMD+ (Honda Tsushin Kogyo Co., Ltd.)
- Plug: PCR-E20FS+ (Honda Tsushin Kogyo Co., Ltd.)
- Shell: PCS-E20L□ (Honda Tsushin Kogyo Co., Ltd.)

## SmartSCALE Linear Encoder (SQ10 Scale + MQ10-□LA Interpolator)

If you use an SGLFW2 Servomotor, remove the thermal protector relay connector and input the thermal protector signal from the Linear Servomotor to the host controller. The thermal protector signal is closed when the temperature is normal and open when the thermal protector is activated. Do not exceed 3 A or 30 V.

\*1. Cables to connect to the host controller are not provided by YASKAWA. Refer to the following manual for information on connector models.  
Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

\*2. Only SGLFW2 Servomotors come equipped with Thermal Protector Relay Connectors.

\*3. This cable configurations shown above is the connection when you use the MQ10-GLA interpolator with polarity sensor.

\*4. The maximum length of the Serial Converter Unit Cable is 15 m.

No.	Cable Type
①	Linear Servomotor Main Circuit Cable
②	Encoder Cable
③	Sensor Cable
④	Linear Encoder Cable from Magnescale Co., Ltd.

## Encoder Cables

These cables are not provided by YASKAWA. Use a shielded cable. Refer to the following tables for the pin layouts.

### SERVOPACK End of Cable (CN2)

- Plug Connector: 55100-0670 (Molex Japan LLC)
- Connector order number: JZSP-CMP9-1-E (SERVOPACK Connector Kit)

Pin	Signal	Function

	15m	JZSP-CMP09-15-E	JZSP-CSP39-15-E

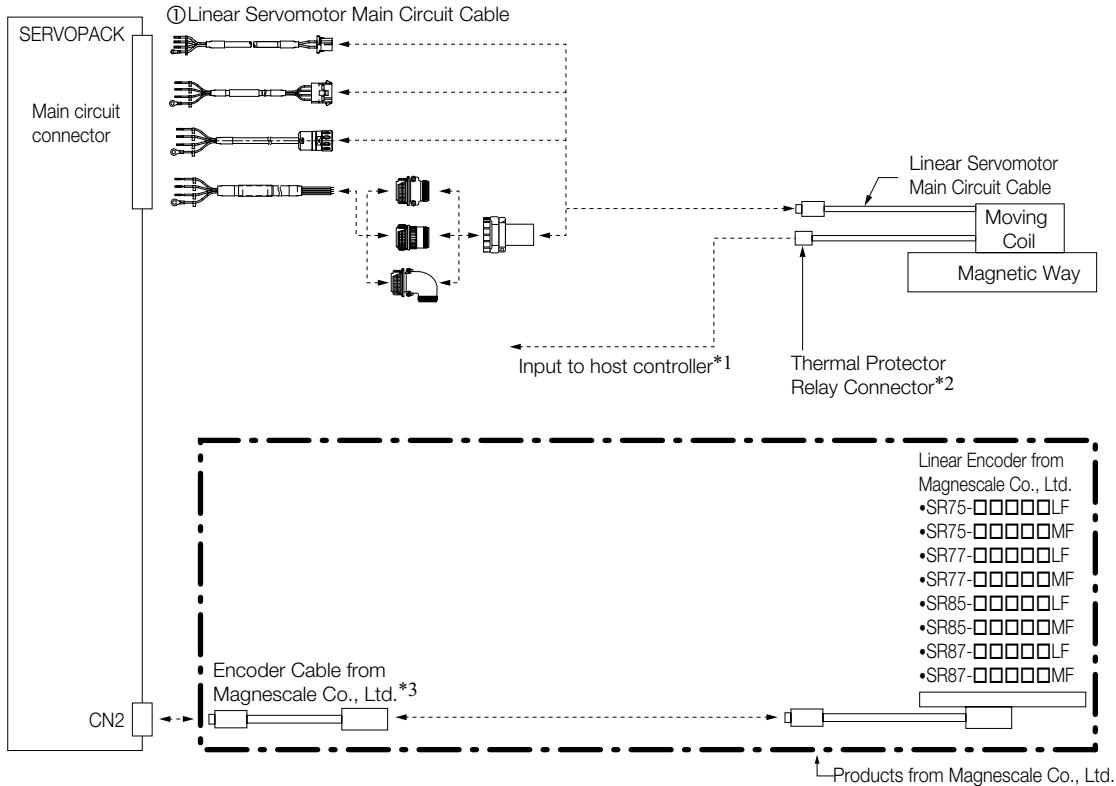

Note: We recommend that you use flexible cables.

# Recommended Linear Encoders & Cables

## SR-75, SR-77, SR-85, and SR-87 Linear Encoders

1. You cannot use an SR-75, SR-77, SR-85, or SR-87 Linear Encoder with a Linear Servomotor with a Polarity Sensor.
2. If you use an SGLFW2 Servomotor, input the thermal protector signal from the Linear Servomotor to the host controller. The thermal protector signal is closed when the temperature is normal and open when the thermal protector is activated. Do not exceed 3 A or 30 V.

\*1. Cables to connect to the host controller are not provided by YASKAWA. Refer to the following manual for information on connector models.  
Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

\*2. Only SGLFW2 Servomotors come equipped with Thermal Protector Relay Connectors.

\*3. To connect the SERVOPACK and Linear Encoder, use a CH33-xx□□G Cable from Magnescale Co., Ltd. (This cable has connectors designed for use with YASKAWA products.)

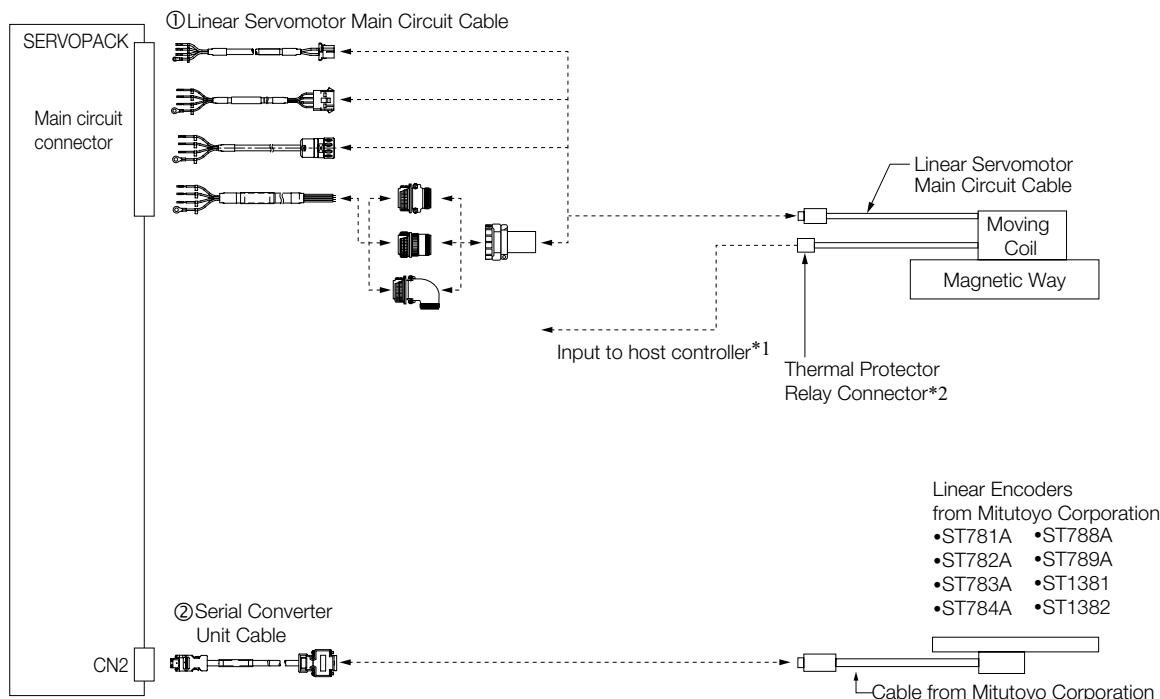

No.	Cable Type
①	Linear Servomotor Main Circuit Cable

## Connections to Linear Encoders from Mitutoyo Corporation

### ST78□A/ST13□□ Linear Encoders

1. You cannot use a ST78□A Linear Encoder together with a Linear Servomotor with a Polarity Sensor.  
 2. If you use an SGLFW2 Servomotor, input the thermal protector signal from the Linear Servomotor to the host controller. The thermal protector signal is closed when the temperature is normal and open when the thermal protector is activated. Do not exceed 3 A or 30 V.

\*1. Cables to connect to the host controller are not provided by YASKAWA. Refer to the following manual for information on connector models.  
 Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

\*2. Only SGLFW2 Servomotors come equipped with Thermal Protector Relay Connectors.

F83 <sup>*7</sup>	Application function option for special motors, SGM7D motor drive, indexing

Note:

Depending on configuration choices made, the model code might end after the 7th or 10th digit, or involve all 13 digits.

Readily available up to 1.5 kW. Others available on request.

Additional accessories and software for SERVOPACKs is described in the Periphery section.

Note:

\*1. You can use these models with either a single-phase or three-phase power supply input.

\*2. A model with a single-phase, 200-VAC power supply input is available as a hardware option (model. SGD7S-120A00A008).

\*3. The rated output is 2.4 kW if you combine the SGM7G-30A with the SGD7S-200A.

\*4. The same SERVOPACKs are used for both Rotary Servomotors and Linear Servomotors.

\*5. A command option module must be attached to the Command Option Attachable-type SERVOPACK for use.

\*6. Refer to the following manual for details.

## SERVOPACK Overload Protection Characteristics

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a YASKAWA-specified combination of SERVOPACK and Servomotor, maintain the effective torque (or effective force) within the continuous duty zone of the torque-motor speed characteristic (or force-motor speed characteristics) of the Servomotor.

## Specifications

Item		Specification	
Control Method		IGBT-based PWM control, sine wave current drive	
Feedback	With Rotary Servomotor	Serial encoder: 17 bits (absolute encoder) 20 bits or 24 bits (incremental encoder/absolute encoder) 22 bits (absolute encoder)	
	With Linear Servomotor	• Absolute linear encoder (The signal resolution depends on the absolute linear encoder.) • Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.)	
Ambient Air Temperature <sup>*1</sup>		-5°C to 55°C With derating, usage is possible between 55°C and 60°C. Refer to the following section for Derating Specifications.	
Storage Temperature		-20°C to 85°C	
Ambient Air Humidity		95% relative humidity max. (with no freezing or condensation)	
Storage Humidity		95% relative humidity max. (with no freezing or condensation)	
Vibration Resistance		4.9 m/s <sup>2</sup>	
Shock Resistance		19.6 m/s <sup>2</sup>	
Environmental Conditions	Protection Class	Class	SERVOPACK Model: SGD7S-
	IP20	R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A, 120A	
	IP10	180A, 200A, 330A, 470A, 550A, 590A, 780A	
	Pollution Degree	2	• Must be no corrosive or flammable gases. • Must be no exposure to water, oil, or chemicals. • Must be no dust, salts, or iron dust.
	Altitude <sup>*1</sup>	1,000 m or less	With derating, usage is possible between 1,000 m and 2,000 m. Refer to the following section for Derating specifications.
	Others	Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity	
Applicable Standards		UL 61800-5-1, EN 50178, CSA C22.2 No.14, EN 61800-5-1, EN 55011 group 1 class A, EN 61000-6-2, EN 61000-6-4, EN 61800-3, IEC 61508-1 to 4, IEC 61800-5-2, IEC 62061, ISO 13849-1, and IEC 61326-3-1	
Mounting	Mounting	SERVOPACK Model: SGD7S-	
	Base-mounted	All models	
	Rack-mounted	R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A, 120A, 180A, 200A, 330A, R70F, R90F, 2R1F, 2R8F	
	Duct-ventilated	470A, 550A, 590A, 780A	
Performance	Speed Control Range	1:5000 (At the rated torque, the lower limit of the speed control range must not cause the Servomotor to stop.)	
	Coefficient of Speed Fluctuation <sup>*2</sup>	±0.01% of rated speed max. (for a load fluctuation of 0% to 100%) 0% of rated speed max. (for a voltage fluctuation of ±10%) ±0.1% of rated speed max. (for a temperature fluctuation of 25°C ±25°C)	
	Torque Control Precision (Repeatability)	±1%	
	Soft Start Time Setting	0 s to 10 s (Can be set separately for acceleration and deceleration.)

Item		Specification
I/O Signals	Encoder Divided Pulse Output	Phase A, phase B, phase C: Line-driver output Number of divided output pulses: Any setting is allowed.
	Linear Servomotor Overheat Protection Signal Input	Number of input points: 1 Input voltage range: 0 V to +5 V
	Fixed Input	Allowable voltage range: 5 VDC ±5% Number of input points: 1 Absolute Data Request (SEN)
		Allowable voltage range: 24 VDC ±20% Number of input points: 7 Input method: Sink inputs or source inputs Input Signals: <ul style="list-style-type: none"><li>● /S-ON (Servo ON) signal</li><li>● /P-CON (Proportional Control) Signal</li><li>● P-OT (Forward Drive Prohibit) and N-OT (Reverse Drive Prohibit) signals</li><li>● /ALM-RST (Alarm Reset) signal</li><li>● /P-CL (Forward External Torque Limit) and /N-CL (Reverse External Torque Limit) signals</li><li>● /SPD-D (Motor Direction) signal</li><li>● /SPD-A and /SPD-B (Internal Set Speed Selection) signals</li><li>● /C-SEL (Control Selection) signal</li><li>● /ZCLAMP (Zero Clamping) signal</li><li>● /INHIBIT (Reference Pulse Inhibit) signal</li><li>● /G-SEL (Gain Selection) signal</li><li>● /P-DET (Polarity Detection) signal</li><li>● SEN (Absolute Data Request) signal</li><li>● /PSEL (Reference Pulse Input Multiplication Switch) Signal</li><li>● FSTP (Forced Stop Input) signal</li></ul>
	Sequence Input Signals	Input Signals That Can Be Allocated  A signal can be allocated and the positive and negative logic can be changed.
		Allowable voltage range: 5 VDC to 30 VDC Number of output points: 1 Output signal: Servo Alarm (ALM)
	Sequence Output Signals	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 6 (A photocoupler output (isolated) is used for three of the outputs.) (An open-collector output (non-isolated) is used for the other three outputs.) Output Signals: <ul style="list-style-type: none"><li>● /COIN (Positioning Completion) Signal</li><li>● /V-CMP (Speed Coincidence Detection) Signal</li><li>● /TGON (Rotation Detection) Signal</li><li>● /S-RDY (Servo Ready) signal</li><li>● /CLT (Torque Limit Detection) Signal</li><li>● /VLT (Speed Limit Detection) Signal</li><li>● /BK (Brake) signal</li><li>● /WARN (Warning) Signal</li><li>● /NEAR (Near) signal</li><li>● /PSELA (Reference Pulse Input Multiplication Switching Output) signal</li><li>● ALO1, ALO2, and ALO3 (Alarm Code) signals</li></ul>
		A signal can be allocated and the positive and negative logic can be changed.
Communications	RS-422A Communications (CN3)	Interfaces Digital Operator (JUSP-OP05A-1-E) and personal computer (with SigmaWin+) Up to N = 15 stations possible for RS-422A port
	Axis Address Setting	Set with parameters.
	USB Communications (CN7)	Interface Personal Computer (with SigmaWin+)
		Communications Standard Conforms to USB 2.0 standard (12 Mbps).
Displays/ Indicators		CHARGE indicator and five-digit seven-segment display
Panel Operator		
Analog Monitor (CN5)		
Dynamic Brake (DB)		
Regenerative Processing		
Overtravel (OT) Prevention		
Protective Functions		
Utility Functions		
Safety Functions	Inputs	/HWBB1 and /HWBB2: Base block signals for Power Modules
	Output	EDM1: Monitors the status of built-in safety circuit (fixed output).
	Applicable Standards* <sup>3</sup>	ISO13849-1 PLe (Category 3) and IEC61508 SIL3
Option Module		
Continued on next page.		

Continued from previous page.

Item		Specification	
Controls	Speed Control	Soft Start Time Setting	
		Input Signal	Reference Voltage • Maximum input voltage: $\pm 12$ V (forward motor rotation for positive reference). • 6 VDC at rated speed (default setting). Input gain setting can be changed.
		Input Impedance	Approx. 14 k $\Omega$
		Circuit Time Constant	30 $\mu$ s
	Internal Set Speed Control	Rotation Direction Selection	With Proportional Control signal
		Speed Selection	With Forward/Reverse External Torque Limit signals (speed 1 to 3 selection). Servomotor stops or another control method is used when both signals are OFF.
		Feedforward Compensation	0% to 100%
Position Control	Input Signals	Output Signal Positioning Completed Width Setting	
		Reference Pulse Form	One of the following is selected: Sign + pulse train, CW + CCW pulse trains, and two-phase pulse trains with 90° phase differential
		Input Form	Line driver or open collector
		Maximum Input Frequency	• Line Driver Sign + pulse train or CW + CCW pulse trains: 4 Mpps Two-phase pulse trains with 90° phase differential: 1 Mpps • Open Collector Sign + pulse train or CW + CCW pulse trains: 200 kpps Two-phase pulse trains with 90° phase differential: 200 kpps
		Input Multiplication Switching	1 to 100 times
		Clear Signal	Position deviation clear Line driver or open collector
		Reference Voltage	• Maximum input voltage: $\pm 12$ V (forward torque output for positive reference) • 3 VDC at rated torque (default setting). Input gain setting can be changed
Torque Control	Input Signal	Input Impedance	Approx. 14 k $\Omega$
		Circuit Time Constant	16 $\mu$ s

- If you combine a S-7-Series SERVOPACK with a S-V-Series Option Module, the following S-V-Series SERVOPACKs specifications must be used: a surrounding air temperature of 0°C to 55°C and an altitude of 1,000 m max. Also, the applicable range cannot be increased by derating.
- The coefficient of speed fluctuation for load fluctuation is defined as follows:

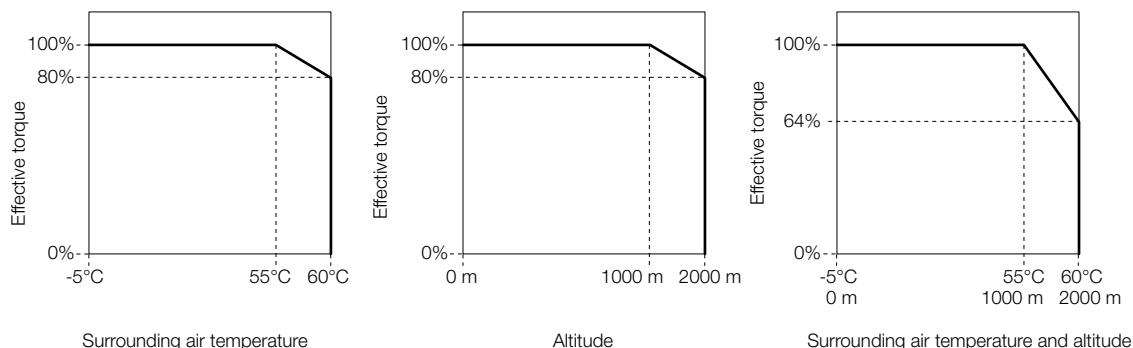

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

- Always perform risk assessment for the system and confirm that the safety requirements are met.

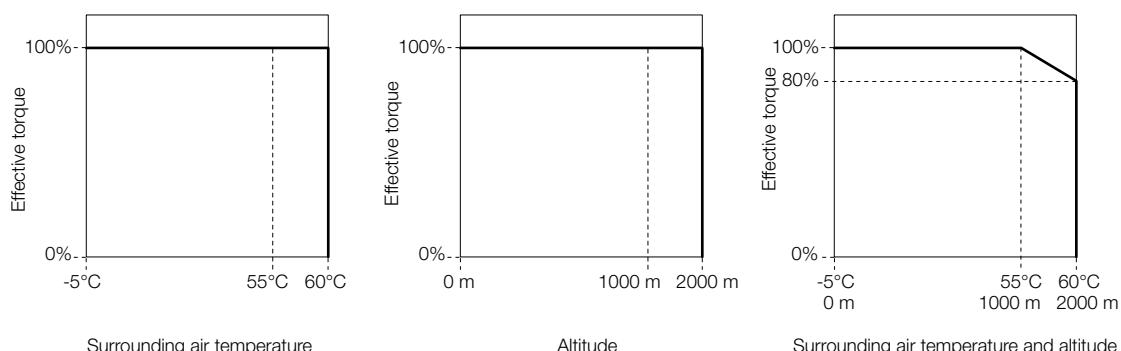

## Derating Specifications

If you use the SERVOPACK at a surrounding air temperature of 55°C to 60°C or at an altitude of 1,000 m to 2,000 m, you must apply the derating rates given in the following graphs.

### SGD7S-R70A, -R90A, -1R6A, -2R8A, -R70F, -R90F, -2R1F, and -2R8F

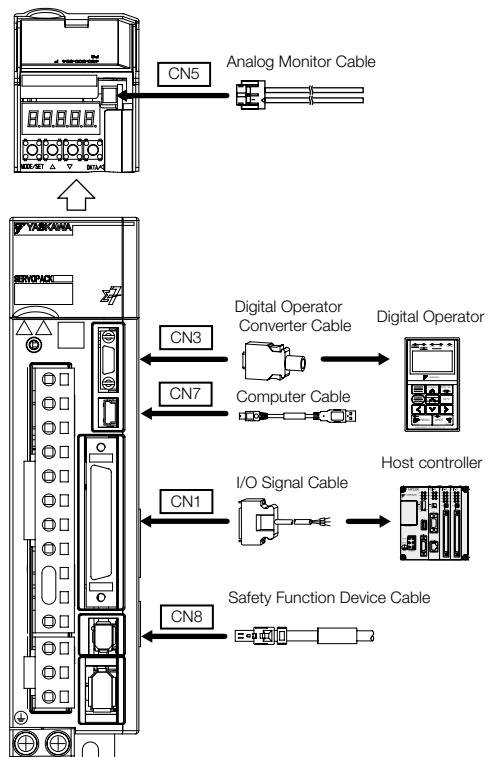

### SGD7S-3R8A, -5R5A, -7R6A, -120A, -180A, -200A, -330A, -470A, -550A, -590A, and -780A

## Selecting Cables SGD7S Analog Voltage/Pulse Train

### System Configurations

# SGD7S Analog Voltage / Pulse Train

## Selection Table

1. Use the cable specified by YASKAWA for the Computer Cable. Operation may not be dependable with any other cable.
2. Use the cable specified by YASKAWA for the MECHATROLINK Communications Cables. Operation may not be dependable due to low noise resistance with any other cable.

Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables  
Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

Code	Description	Length	Order Number	Appearance
CN5	Analog Monitor Cable	1 m	JZSP-CA01-E	
CN3	Digital Operator		JUSP-OP05A-1-E

		Contact Tyco Electronics Japan G.K. Product name: Industrial Mini I/O D-shape Type 1 Plug Connector Kit Model number: 2013595-1		

\*1. This Converter Cable is required to use the Sigma-III-series Digital Operator (JUSP-OP05A) for Sigma-7-series SERVOPACKs.

\*2. When using safety functions, connect this Cable to the safety function devices.

When not using safety functions, connect the enclosed Safety Jumper Connector (JZSP-CVH05-E) to the SERVOPACK.

\*3. Use the Connector Kit when you make cables yourself.

## SERVOPACK Main Circuit Wires

**Important**

These specifications are based on IEC/EN 61800-5-1, UL 61800-5-1, and CSA C22.2 No.274.

1. To comply with UL standards, use UL-compliant wires.
2. Use copper wires with a rated temperature of 75° or higher.
3. Use copper wires with a rated withstand voltage of 300 V or higher.

**Note:**

To use 600-V heat-resistant polyvinyl chloride-insulated wire (HIV), use the following table as reference for the applicable wires.

- The specified wire sizes are for three bundled leads when the rated current is applied with a surrounding air temperature of 40°C.
- Select the wires according to the surrounding air temperature.

### Three-phase, 200-VAC Wires for Sigma-7S SERVOPACKs

SGD7S-	Terminals	Wire Size	Screw Size	Tightening Torque [Nm]
R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A	Main Circuit Power Supply Cable	L1, L2, L3

11th ... 13th digit - FT/EX Specifications	
Code	Specifications
None	None
F82 <sup>*7</sup>	Application function option for special motors, SGM7D motor drive

Note:

Depending on configuration choices made, the model code might end after the 7th or 10th digit, or involve all 13 digits.

Readily available up to 1.5 kW. Others available on request.

Additional accessories and software for SERVOPACKs is described in the Periphery section.

Note:

\*1. You can use these models with either a single-phase or three-phase power supply input.

\*2. A model with a single-phase, 200-VAC power supply input is available as a hardware option (model. SGD7S-120A00A008).

\*3. The rated output is 2.4 kW if you combine the SGM7G-30A with the SGD7S-200A.

\*4. The same SERVOPACKs are used for both Rotary Servomotors and Linear Servomotors.

\*5. A command option module must be attached to the Command Option Attachable-type SERVOPACK for use.

\*6. Refer to the following manual for details.

  Sigma-7-Series AC Servo Drive Sigma-7S/Sigma-7W SERVOPACK with Hardware Option Specifications Dynamic Brake Product Manual (Manual No.: SIEP S800001 73)

\*7. Refer to the following manual for details.

  Sigma-7-Series AC Servo Drive Σ-7S SERVOPACK with FT/EX Specification for SGM7D Motor Product Manual (Manual No.: SIEP S800001 91)

\*3. This value is for the optional JUSP-RA05-E Regenerative Resistor Unit.

## SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C. An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a YASKAWA-specified combination of SERVOPACK and Servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic of the Servomotor.

## Specifications

Item	Specification	
Control Method	IGBT-based PWM control, sine wave current drive	
Feedback	With Rotary Servomotor	Serial encoder: 17 bits (absolute encoder) 20 bits or 24 bits (incremental encoder/absolute encoder) 22 bits (absolute encoder)
	With Linear Servomotor	• Absolute linear encoder (The signal resolution depends on the absolute linear encoder.) • Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.)
Environmental Conditions	Ambient Air Temperature <sup>*1</sup>	-5°C to 55°C With derating, usage is possible between 55°C and 60°C. Refer to the following section for Derating Specifications.
	Storage Temperature	-20°C to 85°C
	Ambient Air Humidity	95% relative humidity max. (with no freezing or condensation)
	Storage Humidity	95% relative humidity max. (with no freezing or condensation)
	Vibration Resistance	4.9 m/s <sup>2</sup>
	Shock Resistance	19.6 m/s <sup>2</sup>
	Protection Class	Class R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A, 120A, R70F, R90F, 2R1F, 2R8F IP20 120A10A008, 180A, 200A, 330A, 470A, 550A, 590A, 780A IP10
	Pollution Degree	2 • Must be no corrosive or flammable gases. • Must be no exposure to water, oil, or chemicals. • Must be no dust, salts, or iron dust.
	Altitude <sup>*1</sup>	1,000 m or less With derating, usage is possible between 1,000 m and 2,000 m. Refer to the following section for Derating specifications.
	Others	Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity
	Applicable Standards	
UL 61800-5-1, EN 50178, CSA C22.2 No.14, EN 61800-5-1, EN 55011 group 1 class A, EN 61000-6-2, EN 61000-6-4, EN 61800-3, IEC 61508-1 to 4, IEC 61800-5-2, IEC 62061, ISO 13849-1, and IEC 61326-3-1		
Mounting	Mounting	SERVOPACK Model: SGD7S-
	Base-mounted	All models
	Rack-mounted	R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A, 120A, 180A, 200A, 330A, R70F, R90F, 2R1F, 2R8F
	Duct-ventilated	470A, 550A, 590A, 780A
Performance	Speed Control Range	1:5,000 (At the rated torque, the lower limit of the speed control range must not cause the Servomotor to stop.)
	Coefficient of Speed Fluctuation <sup>*2</sup>	±0.01% of rated speed max. (for a load fluctuation of 0% to 100%) 0% of rated speed max. (for a voltage fluctuation of ±10%) ±0.1% of rated speed max. (for a temperature fluctuation of 25°C ±25°C)
	Torque Control Precision (Repeatability)	±1%
	Soft Start Time Setting	0 s to 10 s (Can be set separately for acceleration and deceleration.)

Inputs	/HWBB1 and /HWBB2: Base block signals for Power Modules						
Output	EDM1: Monitors the status of built-in safety circuit (fixed output).						
Applicable Standards <sup>*3</sup>	ISO13849-1 PLe (Category 3) and IEC61508 SIL3						
Option Module	Fully-Closed Module and Safety Module Note: You cannot use a Fully-Closed Module and a Safety Module together.						

\*1. If you combine a Sigma-7-Series SERVOPACK with a Sigma-V-Series Option Module, the following Sigma-V-Series SERVOPACKs specifications must be used: a surrounding air temperature of 0°C to 55°C and an altitude of 1,000 m max. Also, the applicable range cannot be increased by derating.

\*2. The coefficient of speed fluctuation for load fluctuation is defined as follows:

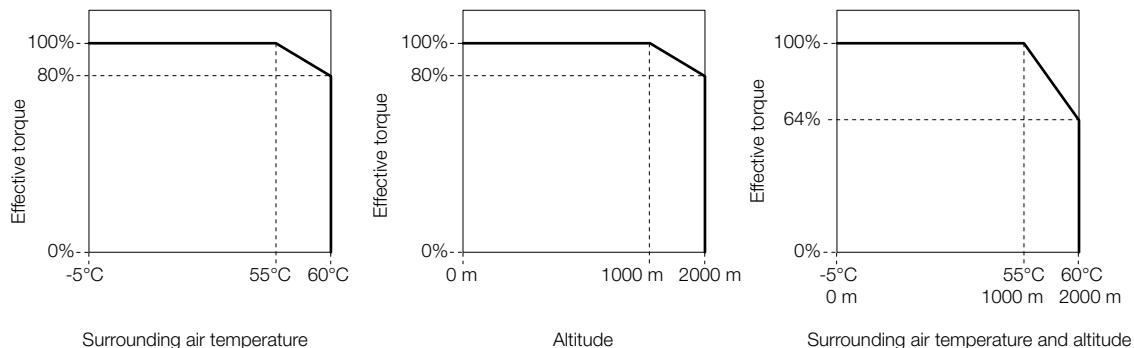

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

\*3. Always perform risk assessment for the system and confirm that the safety requirements are met.

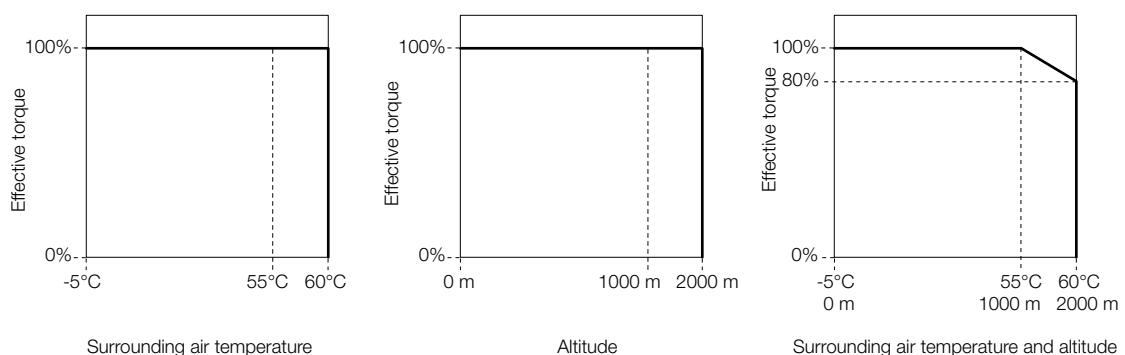

## Derating Specifications

If you use the SERVOPACK at a surrounding air temperature of 55°C to 60°C or at an altitude of 1,000 m to 2,000 m, you must apply the derating rates given in the following graphs.

### SGD7S-R70A, -R90A, -1R6A, -2R8A, -R70F, -R90F, -2R1F, and -2R8F

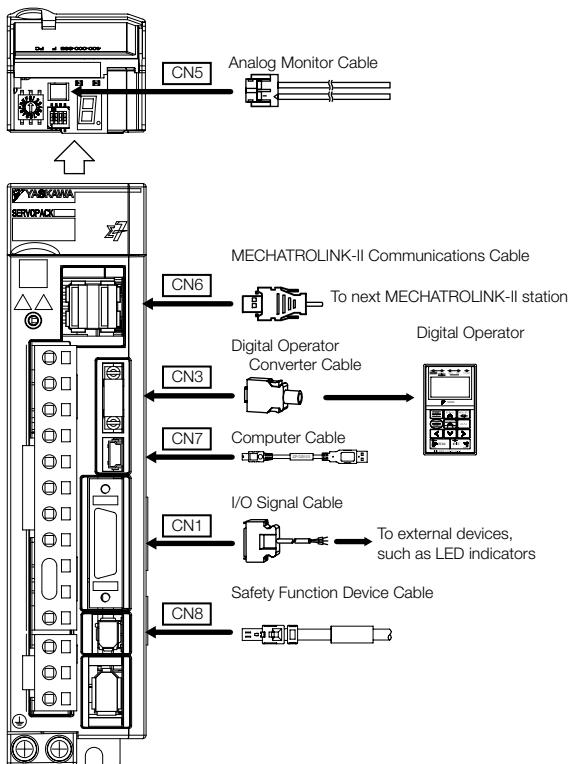

### SGD7S-3R8A, -5R5A, -7R6A, -120A, -180A, -200A, -330A, -470A, -550A, -590A, and -780A

# Selecting Cables SGD7S MECHATROLINK-II

## System Configurations

## Selection Table

1. Use the cable specified by YASKAWA for the Computer Cable. Operation may not be dependable with any other cable.
2. Use the cable specified by YASKAWA for the MECHATROLINK Communications Cables. Operation may not be dependable due to low noise resistance with any other cable.

Refer to the following manual for the following information.

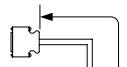

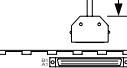

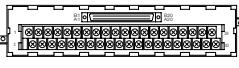

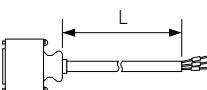

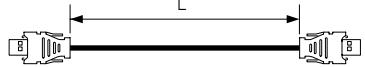

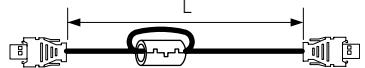

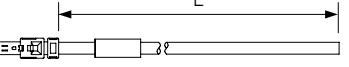

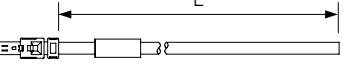

- Cable dimensional drawings and cable connection specifications
  - Order numbers and specifications of individual connectors for cables
- Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

\*1. This Converter Cable is required to use the Sigma-III-series Digital Operator (JUSP-OPO5A) for Sigma-7-series SERVOPACKs.

\*2. When using safety functions, connect this Cable to the safety function devices.

When not using safety functions, connect the enclosed Safety Jumper Connector (JZSP-CVH05-E) to the SERVOPACK.

\*3. Use the Connector Kit when you make cables yourself.

## SERVOPACK Main Circuit Wires

**Important**

These specifications are based on IEC/EN 61800-5-1, UL 61800-5-1, and CSA C22.2 No.274.

1. To comply with UL standards, use UL-compliant wires.
2. Use copper wires with a rated temperature of 75° or higher.
3. Use copper wires with a rated withstand voltage of 300 V or higher.

**Note:**

To use 600-V heat-resistant polyvinyl chloride-insulated wire (HIV), use the following table as reference for the applicable wires.

- The specified wire sizes are for three bundled leads when the rated current is applied with a surrounding air temperature of 40°C.
- Select the wires according to the surrounding air temperature.

### Three-phase, 200-VAC Wires for Sigma-7S SERVOPACKs

F82 <sup>*7</sup>	Application function option for special motors, SGM7D motor drive

Note:

Depending on configuration choices made, the model code might end after the 7th or 10th digit, or involve all 13 digits.

Readily available up to 1.5kW. Others available on request.

Additional accessories and software for SERVOPACKs is described in the Periphery section.

Note:

\*1. You can use these models with either a single-phase or three-phase power supply input.

\*2. A model with a single-phase, 200-VAC power supply input is available as a hardware option (model. SGD7S-120A00A008).

\*3. The rated output is 2.4 kW if you combine the SGM7G-30A with the SGD7S-200A.

\*4. The same SERVOPACKs are used for both Rotary Servomotors and Linear Servomotors.

\*5. A command option module must be attached to the Command Option Attachable-type SERVOPACK for use.

\*6. Refer to the following manual for details.

Sigma-7-Series AC Servo Drive Sigma-7S/Sigma-7W SERVOPACK with Hardware Option Specifications Dynamic Brake Product Manual (Manual No.: SIEP S800001 73)

\*7. Refer to the following manual for details.

Note: Readily available up to 1.5 kW. Others available on request.

## SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C. An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

## Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a YASKAWA-specified combination of SERVOPACK and Servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic of the Servomotor.

# Specifications

Item	Specification					
Drive Method	IGBT-based PWM control, sine wave current drive					
	With Rotary Servomotor	Serial encoder: 17 bits (absolute encoder) 20 bits or 24 bits (incremental encoder/absolute encoder) 22 bits (absolute encoder)				
Feedback	With Linear Servomotor	<ul style="list-style-type: none"> <li>Absolute linear encoder (The signal resolution depends on the absolute linear encoder.)</li> <li>Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.)</li> </ul>				
	Ambient Air Temperature <sup>*1</sup>	-5°C to 55°C With derating, usage is possible between 55°C and 60°C. Refer to the following section for Derating Specifications.				
	Storage Temperature	-20°C to 85°C				
	Ambient Air Humidity	95% relative humidity max. (with no freezing or condensation)				
	Storage Humidity	95% relative humidity max. (with no freezing or condensation)				
	Vibration Resistance	4.9 m/s <sup>2</sup>				
	Shock Resistance	19.6 m/s <sup>2</sup>				
Environmental Conditions	Class	SERVOPACK Model: SGD7S-				
	Protection Class	IP20	R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A, 120A, R70F, R90F, 2R1F, 2R8F			
		IP10	120A20A008, 180A, 200A, 330A, 470A, 550A, 590A, 780A			
	Pollution Degree	2	<ul style="list-style-type: none"> <li>Must be no corrosive or flammable gases.</li> <li>Must be no exposure to water, oil, or chemicals.</li> <li>Must be no dust, salts, or iron dust.</li> </ul>			
	Altitude <sup>*1</sup>	1,000 m or less	With derating, usage is possible between 1,000 m and 2,000 m. Refer to the following section for Derating specifications.			
	Others	Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity				
	UL 61800-5-1 (E147823), CSA C22.2 No.274, EN ISO13849-1: 2015, EN 55011 group 1 class A, EN 61000-6-2, EN 61000-6-4, EN 61800-3 (Category C2, Second environment), EN 50178, EN 61800-5-1, IEC 60204-1, IEC 61508 series, IEC 62061, IEC 61800-5-2, and IEC 61326-3-1					
	Mounting	Mounting	SERVOPACK Model: SGD7S-			
	Base-mounted	All models				
	Rack-mounted	R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A, 120A, 180A, 200A, 330A, R70F, R90F, 2R1F, 2R8F				
	Duct-ventilated	470A, 550A, 590A, 780A				
Performance	Speed Control Range	1:5,000 (At the rated torque, the lower limit of the speed control range must not cause the Servomotor to stop.)				
	Coefficient of Speed Fluctuation <sup>*2</sup>	<ul style="list-style-type: none"> <li>±0.01% of rated speed max. (for a load fluctuation of 0% to 100%)</li> <li>0% of rated speed max. (for a voltage fluctuation of ±10%)</li> <li>±0.1% of rated speed max. (for a temperature fluctuation of 25°C ±25°C)</li> </ul>				
	Torque Control Precision (Repeatability)	±1%				
	Soft Start Time Setting	0 s to 10 s (Can be set separately for acceleration and deceleration.)

Inputs	/HWBB1 and /HWBB2: Base block signals for Power Modules						
Output	EDM1: Monitors the status of built-in safety circuit (fixed output).						
Applicable Standards <sup>*3</sup>	ISO13849-1 PLe (Category 3), IEC61508 SIL3						
Option Module	Fully-Closed Module and Safety Module Note: You cannot use a Fully-Closed Module and a Safety Module together.						

\*1. If you combine a S-7-Series SERVOPACK with a S-V-Series Option Module, the following S-V-Series SERVOPACKs specifications must be used: a surrounding air temperature of 0°C to 55°C and an altitude of 1,000 m max. Also, the applicable range cannot be increased by derating.

\*2. The coefficient of speed fluctuation for load fluctuation is defined as follows:

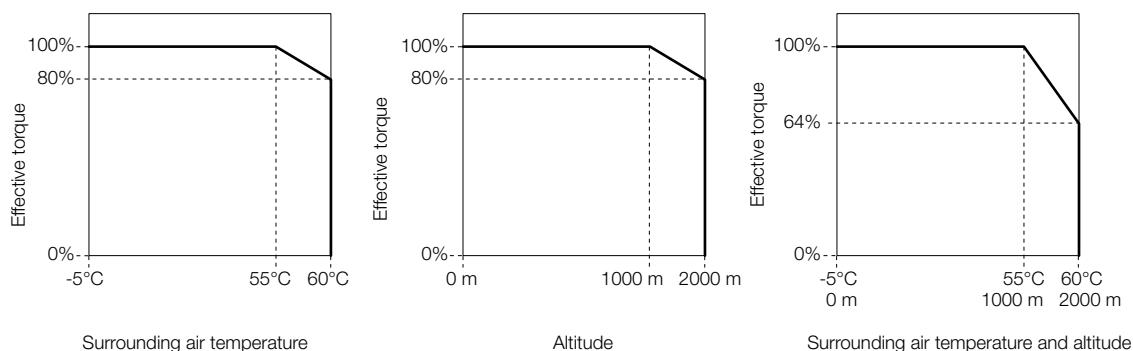

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

\*3. Always perform risk assessment for the system and confirm that the safety requirements are met.

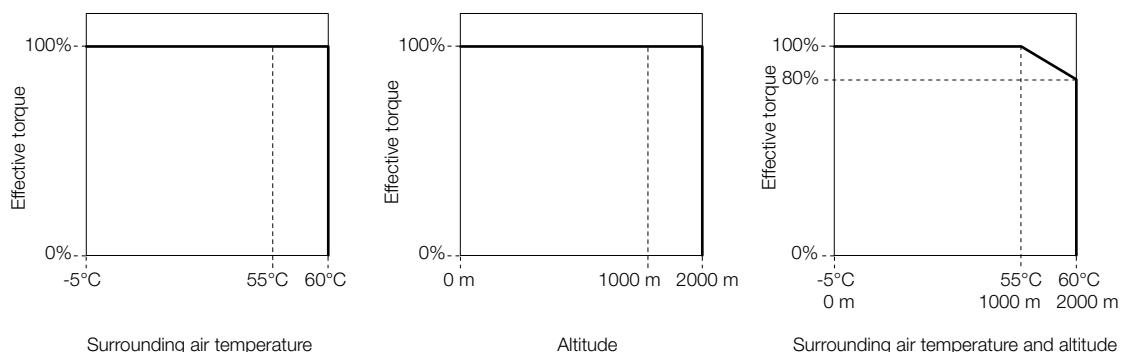

## Derating Specifications

If you use the SERVOPACK at a surrounding air temperature of 55°C to 60°C or at an altitude of 1,000 m to 2,000 m, you must apply the derating rates given in the following graphs.

### SGD7S-R70A, -R90A, -1R6A, -2R8A, -R70F, -R90F, -2R1F, and -2R8F

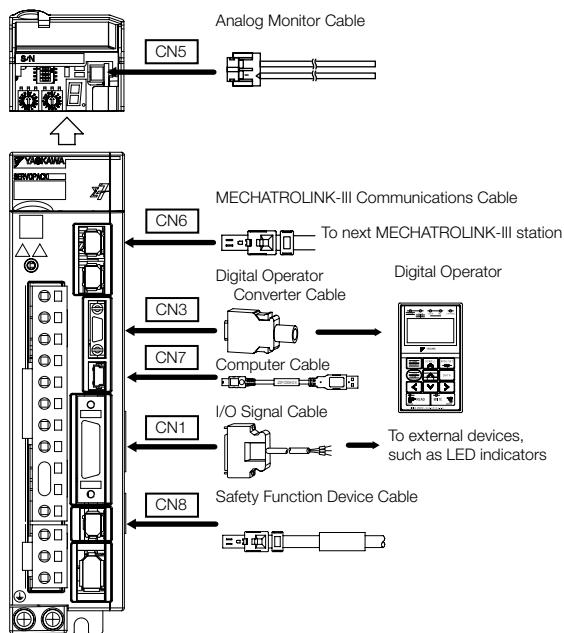

### SGD7S-3R8A, -5R5A, -7R6A, -120A, -180A, -200A, -330A, -470A, -550A, -590A, and -780A

# Selecting Cables SGD7S MECHATROLINK-III

## System Configurations

## Selection Table

1. Use the cable specified by YASKAWA for the Computer Cable. Operation may not be dependable with any other cable.
2. Use the cable specified by YASKAWA for the MECHATROLINK Communications Cables. Operation may not be dependable due to low noise resistance with any other cable.

Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
  - Order numbers and specifications of individual connectors for cables
- Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

Code	Description	Length	Order Number	Appearance
CN5	Analog Monitor Cable	1 m	JZSP-CA01-E

\*1. This Converter Cable is required to use the Sigma-III-series Digital Operator (JUSP-OP05A) for S-7-series SERVOPACKs.

\*2. If you use a MECHATROLINK-III Communications Reference SERVOPACK, this Converter Cable is required to prevent the cable from disconnecting from the Digital Operator.

\*3. This cable is available in two variants. The order number for these cables differs at the marked □, an „R“ at this place is used for Cables with RJ45 Connectors on both ends, while an „M“ is used for Cables with RJ45 Connector on One End and IMI Connector on the other End.

\*4. When using safety functions, connect this Cable to the safety function devices.

When not using safety functions, connect the enclosed Safety Jumper Connector (JZSP-CVH05-E) to the SERVOPACK.

\*5. Use the Connector Kit when you make cables yourself.

## SERVOPACK Main Circuit Wires

**Important**

These specifications are based on IEC/EN 61800-5-1, UL 61800-5-1, and CSA C22.2 No.274.

1. To comply with UL standards, use UL-compliant wires.
2. Use copper wires with a rated temperature of 75° or higher.
3. Use copper wires with a rated withstand voltage of 300 V or higher.

**Note:**

To use 600-V heat-resistant polyvinyl chloride-insulated wire (HIV), use the following table as reference for the applicable wires.

- The specified wire sizes are for three bundled leads when the rated current is applied with a surrounding air temperature of 40°C.
- Select the wires according to the surrounding air temperature.

### Three-phase, 200-VAC Wires for Sigma-7S SERVOPACKs

SGD7S-	Terminals	Wire Size	Screw Size	Tightening Torque [Nm]

590	11 kW
780	15 kW

Note:

Depending on configuration choices made, the model code might end after the 7th or 10th digit, or involve all 13 digits.

Readily available up to 1.5 kW. Others available on request.

Additional accessories and software for SERVOPACKs is described in the Periphery section.

Note:

\*1. You can use these models with either a single-phase or three-phase power supply input.

\*2. A model with a single-phase, 200-VAC power supply input is available as a hardware option (model. SGD7S-120A00A008).

\*3. The rated output is 2.4 kW if you combine the SGM7G-30A with the SGD7S-200A.

\*4. The same SERVOPACKs are used for both Rotary Servomotors and Linear Servomotors.

\*5. A command option module must be attached to the Command Option Attachable-type SERVOPACK for use.

\*6. Refer to the following manual for details.

Note: Readily available up to 1.5 kW. Others available on request.

\*1. This is the net value at the rated load.

\*2. This value is for the optional JUSP-RA04-E Regenerative Resistor Unit.

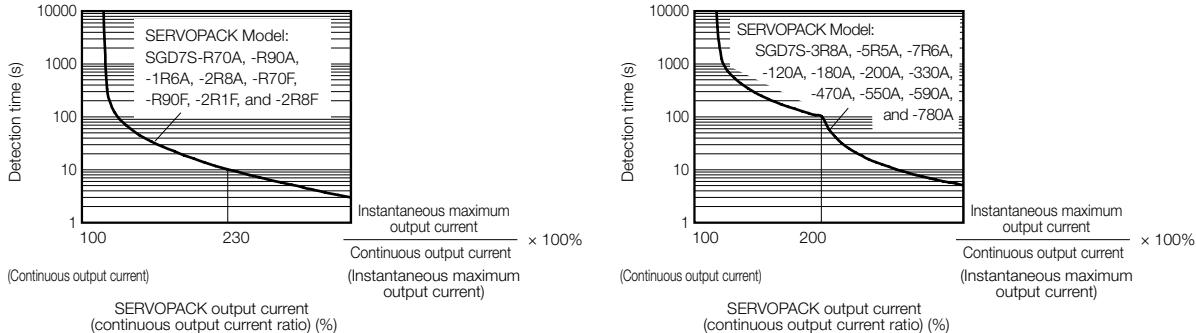

\*3. This value is for the optional JUSP-RA05-E Regenerative Resistor Unit.

## SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C. An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a YASKAWA-specified combination of SERVOPACK and Servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic of the Servomotor.

# Specifications

Item	Specification			
Drive Method	IGBT-based PWM control, sine wave current drive			
	With Rotary Servomotor	Serial encoder: 17 bits (absolute encoder) 20 bits or 24 bits (incremental encoder/absolute encoder) 22 bits (absolute encoder)		
Feedback	With Linear Servomotor	<ul style="list-style-type: none"> <li>Absolute linear encoder (The signal resolution depends on the absolute linear encoder.)</li> <li>Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.)</li> </ul>		
	Ambient Air Temperature <sup>*1</sup>	-5°C to 55°C With derating, usage is possible between 55°C and 60°C. Refer to the following section for Derating Specifications.		
	Storage Temperature	-20°C to 85°C		
	Ambient Air Humidity	95% relative humidity max. (with no freezing or condensation)		
	Storage Humidity	95% relative humidity max. (with no freezing or condensation)		
	Vibration Resistance	4.9 m/s <sup>2</sup>		
	Shock Resistance	19.6 m/s <sup>2</sup>		
Environmental Conditions	Class	SERVOPACK Model: SGD7S-		
	Protection Class	R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A, 120A, R70F, R90F, 2R1F, 2R8F		
	IP20	120A20A008, 180A, 200A, 330A, 470A, 550A, 590A, 780A		
	IP10			
	2			
	Pollution Degree	<ul style="list-style-type: none"> <li>Must be no corrosive or flammable gases.</li> <li>Must be no exposure to water, oil, or chemicals.</li> <li>Must be no dust, salts, or iron dust.</li> </ul>		
	Altitude <sup>*1</sup>	1,000 m or less With derating, usage is possible between 1,000 m and 2,000 m. Refer to the following section for Derating specifications.		
	Others	Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity		
		UL 61800-5-1 (E147823), CSA C22.2 No.274, EN ISO13849-1: 2015, EN 55011 group 1 class A, EN 61000-6-2, EN 61000-6-4, EN 61800-3 (Category C2, Second environment), EN 50178, EN 61800-5-1, IEC 60204-1, IEC 61508 series, IEC 62061, IEC 61800-5-2, and IEC 61326-3-1		
Mounting	Mounting	SERVOPACK Model: SGD7S-		
	Base-mounted	All models		
	Rack-mounted	R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A, 120A, 180A, 200A, 330A, R70F, R90F, 2R1F, 2R8F		
	Duct-ventilated	470A, 550A, 590A, 780A		
Performance	Speed Control Range	1:5,000 (At the rated torque, the lower limit of the speed control range must not cause the Servomotor to stop.)		
	Coefficient of Speed Fluctuation <sup>*2</sup>	<ul style="list-style-type: none"> <li>±0.01% of rated speed max. (for a load fluctuation of 0% to 100%)</li> <li>0% of rated speed max. (for a voltage fluctuation of ±10%)</li> <li>±0.1% of rated speed max. (for a temperature fluctuation of 25°C ±25°C)</li> </ul>		
	Torque Control Precision (Repeatability)	±1%		
	Soft Start Time Setting	0 s to 10 s (Can be set separately for acceleration and deceleration.)

Inputs	/HWBB1 and /HWBB2: Base block signals for Power Modules						
Output	EDM1: Monitors the status of built-in safety circuit (fixed output).						
Applicable Standards <sup>*3</sup>	ISO13849-1 PLe (Category 3), IEC61508 SIL3						
Option Module	Fully-Closed Module and Safety Module Note: You cannot use a Fully-Closed Module and a Safety Module together.						

\*1. If you combine a S-7-Series SERVOPACK with a S-V-Series Option Module, the following S-V-Series SERVOPACKs specifications must be used: a surrounding air temperature of 0°C to 55°C and an altitude of 1,000 m max. Also, the applicable range cannot be increased by derating.

\*2. The coefficient of speed fluctuation for load fluctuation is defined as follows:

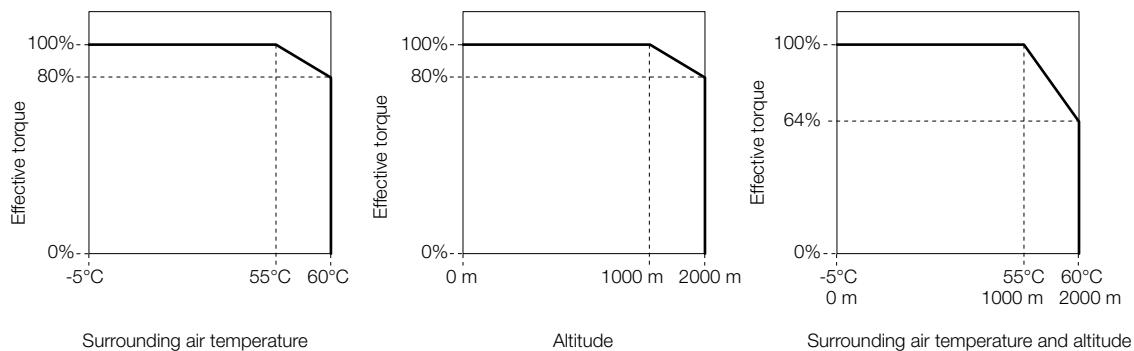

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

\*3. Always perform risk assessment for the system and confirm that the safety requirements are met.

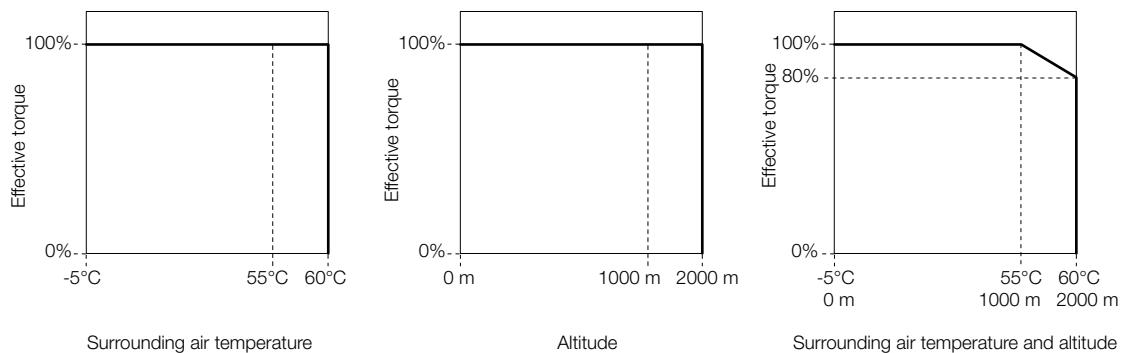

## Derating Specifications

If you use the SERVOPACK at a surrounding air temperature of 55°C to 60°C or at an altitude of 1,000 m to 2,000 m, you must apply the derating rates given in the following graphs.

### SGD7S-R70A, -R90A, -1R6A, -2R8A, -R70F, -R90F, -2R1F, and -2R8F

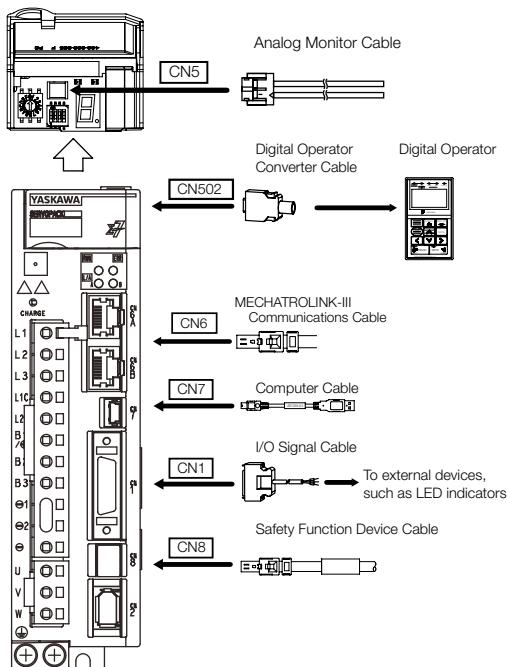

### SGD7S-3R8A, -5R5A, -7R6A, -120A, -180A, -200A, -330A, -470A, -550A, -590A, and -780A

## Selecting Cables SGD7S MECHATROLINK-III with RJ45

### System Configurations

### Selection Table

1. Use the cable specified by YASKAWA for the Computer Cable. Operation may not be dependable with any other cable.
2. Use the cable specified by YASKAWA for the MECHATROLINK Communications Cables. Operation may not be dependable due to low noise resistance with any other cable.

Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
  - Order numbers and specifications of individual connectors for cables
- Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

\*1. This Converter Cable is required to use the Sigma-III-series Digital Operator (JUSP-OP05A) for S-7-series SERVOPACKs.

\*2. If you use a MECHATROLINK-III Communications Reference SERVOPACK, this Converter Cable is required to prevent the cable from disconnecting from the Digital Operator.

\*3. This cable is available in two variants. The order number for these cables differs at the marked □, an „R“ at this place is used for Cables with RJ45 Connectors on both ends, while an „M“ is used for Cables with RJ45 Connector on One End and IMI Connector on the other End.

\*4. When using safety functions, connect this Cable to the safety function devices.

When not using safety functions, connect the enclosed Safety Jumper Connector (JZSP-CVH05-E) to the SERVOPACK.

\*5. Use the Connector Kit when you make cables yourself.

## SERVOPACK Main Circuit Wires

**Important**

These specifications are based on IEC/EN 61800-5-1, UL 61800-5-1, and CSA C22.2 No.274.

1. To comply with UL standards, use UL-compliant wires.
2. Use copper wires with a rated temperature of 75° or higher.
3. Use copper wires with a rated withstand voltage of 300 V or higher.

**Note:**

To use 600-V heat-resistant polyvinyl chloride-insulated wire (HIV), use the following table as reference for the applicable wires.

- The specified wire sizes are for three bundled leads when the rated current is applied with a surrounding air temperature of 40°C.
- Select the wires according to the surrounding air temperature.

### Three-phase, 200-VAC Wires for Sigma-7S SERVOPACKs

200 <sup>*3</sup>	3.0 kW
330	5.0 kW
470	6.0 kW
550	7.5 kW
590	11 kW
780	15 kW

Note:

Depending on configuration choices made, the model code might end after the 7th or 10th digit, or involve all 13 digits.

Readily available up to 1.5 kW. Others available on request.

Additional accessories and software for SERVOPACKs is described in the Periphery section.

Note:

\*1. You can use these models with either a single-phase or three-phase power supply input.

\*2. A model with a single-phase, 200-VAC power supply input is available as a hardware option (model. SGD7S-120A00A008).

\*3. The rated output is 2.4 kW if you combine the SGM7G-30A with the SGD7S-200A.

\*4. The same SERVOPACKs are used for both Rotary Servomotors and Linear Servomotors.

\*5. A Command option module must be attached to the Command Option Attachable-type SERVOPACK for use.

\*6. Refer to the following manual for details.

Sigma-7-Series AC Servo Drive Sigma-7S/Sigma-7W SERVOPACK with Hardware Option Specifications Dynamic Brake Product Manual (Manual No.: SIEP S800001 73)

\*7. Refer to the following manual for details.

Sigma-7-Series AC Servo Drive Σ-7S SERVOPACK with FT/EX Specification for SGM7D Motor Product Manual (Manual No.: SIEP S800001 91)

## SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C. An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed. The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

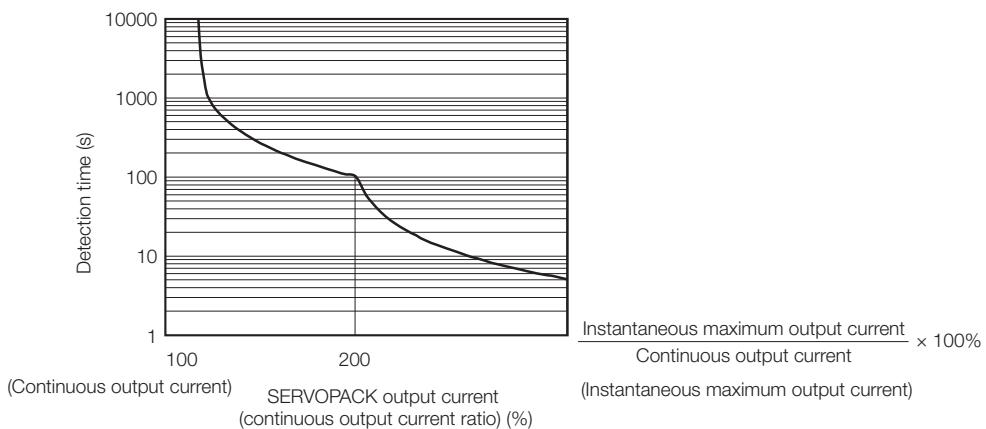

### SGD7S-R70A, -R90A, -1R6A, -2R8A, -R70F, -R90F, -2R1F, and -2R8F

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. For a YASKAWA-specified combination of SERVOPACK and Servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic of the Servomotor.

### SGD7S-3R8A, -5R5A, -7R6A, -120A, -180A, -200A, -330A, -470A, -550A, -590A and -780A

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. For a YASKAWA-specified combination of SERVOPACK and Servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic of the Servomotor.

## Specifications

Item	Specification				
Control Method	IGBT-based PWM control, sine wave current drive				
Feedback	With Rotary Servomotor	Serial encoder: 20 bits or 24 bits (incremental encoder/absolute encoder) 22 bits (absolute encoder)			
	With Linear Servomotor	<ul style="list-style-type: none"> <li>Absolute linear encoder (The signal resolution depends on the absolute linear encoder.)</li> <li>Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.)</li> </ul>			
Environmental Conditions	Ambient Air Temperature <sup>1</sup>	-5°C to 55°C With derating, usage is possible between 55°C and 60°C. Refer to the following section for Derating Specifications.			
	Storage Temperature	-20°C to 85°C			
	Ambient Air Humidity	95% relative humidity max. (with no freezing or condensation)			
	Storage Humidity	95% relative humidity max. (with no freezing or condensation)			
	Vibration Resistance	4.9 m/s <sup>2</sup>			
	Shock Resistance	19.6 m/s <sup>2</sup>

Item	Specification
EtherCAT Communications	Applicable Communications Standards IEC 61158 Type 12, IEC 61800-7 CiA402 Drive Profile
	Physical Layer 100BASE-TX (IEEE 802.3)
	Communications Connectors CN6A (RJ45): EtherCAT signal input connector CN6B (RJ45): EtherCAT signal output connector
	Cable Category 5, 4 shielded twisted pairs * The cable is automatically detected with AUTO MDIX.
	Sync Manager SM0: Mailbox output, SM1: Mailbox input, SM2: Process data output, and SM3: Process data input
	FMMU FMMU 0: Mapped in process data output (RxPDO) area. FMMU 1: Mapped in process data input (TxPDO) area. FMMU 2: Mapped to mailbox status.
	EtherCAT Commands (Data Link Layer) APRD, FPRD, BRD, LRD, APWR, FPWR, BWR, LWR, ARMW, and FRMW (APRW, FPRW, BRW, and LRW commands are not supported.)
	Process Data Assignments can be changed with PDO mapping.
	Mailbox (CoE) Emergency messages, SDO requests, SDO responses, and SDO information (TxPDO/RxPDO and remote TxPDO/RxPDO are not supported.)
	Distributed Clocks Free-Run Mode and DC Mode (Can be switched.) Applicable DC cycles: 125 µs to 4 ms in 125-µs increments
CiA402 Drive Profile	Slave Information Interface 256 bytes (read-only)
	Indicators EtherCAT communications in progress: Link/Activity x 2 EtherCAT communications status: RUN x 1 EtherCAT error status: ERR x 1 <ul style="list-style-type: none"><li>• Homing Mode</li><li>• Profile Position Mode</li><li>• Interpolated Position Mode</li><li>• Profile Velocity Mode</li><li>• Profile Torque Mode</li><li>• Cyclic Synchronous Position Mode</li><li>• Cyclic Synchronous Velocity Mode</li><li>• Cyclic Synchronous Torque Mode</li><li>• Touch Probe Function</li><li>• Torque Limit Function</li></ul> Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA Settling time (±1%): 1.2 ms (Typ)
Analog Monitor (CN5)	Dynamic Brake (DB) Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.
	Built-in (An external resistor must be connected to the SGD7S-470A to -780A.) Refer to the following manual for details. Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)
Regenerative Processing	Overtravel (OT) Prevention Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit) or N-OT (Reverse Drive Prohibit) signal
	Protective Functions Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.
Safety Functions	Utility Functions Gain adjustment, alarm history, jogging, origin search, etc.
	Inputs /HWBB1 and /HWBB2: Base block signals for Power Modules
	Output EDM1: Monitors the status of built-in safety circuit (fixed output).
Applicable Option Modules	
ISO13849-1 PLe (Category 3), IEC61508 SIL3	
Fully-closed Modules and Safety Modules Note: You cannot use a Fully-closed Module and a Safety Module together.	

Note:

\*1. If you combine a Sigma-7-Series SERVOPACK with a Sigma-V-Series Option Module, the following Sigma-V-Series SERVOPACKs specifications must be used: a surrounding air temperature of 0°C to 55°C and an altitude of 1,000 m max. Also, the applicable surrounding range cannot be increased by derating.

\*2. The coefficient of speed fluctuation for load fluctuation is defined as follows:

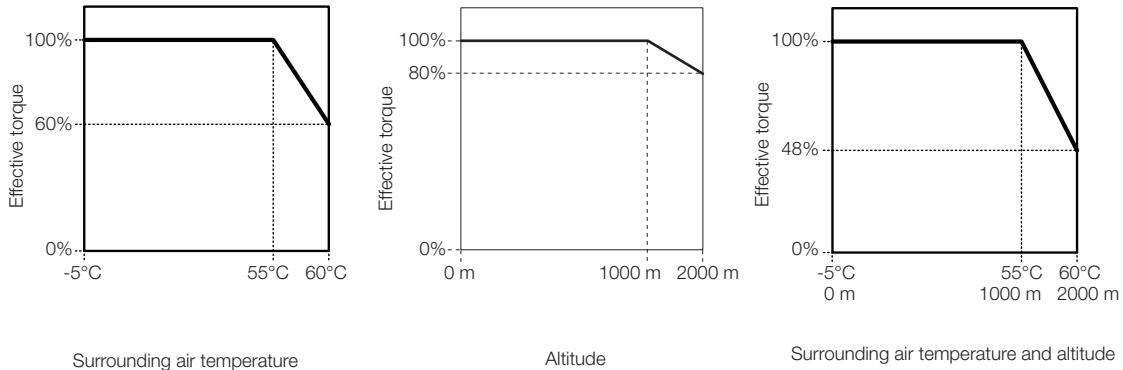

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

\*3. Always perform risk assessment for the system and confirm that the safety requirements are met.

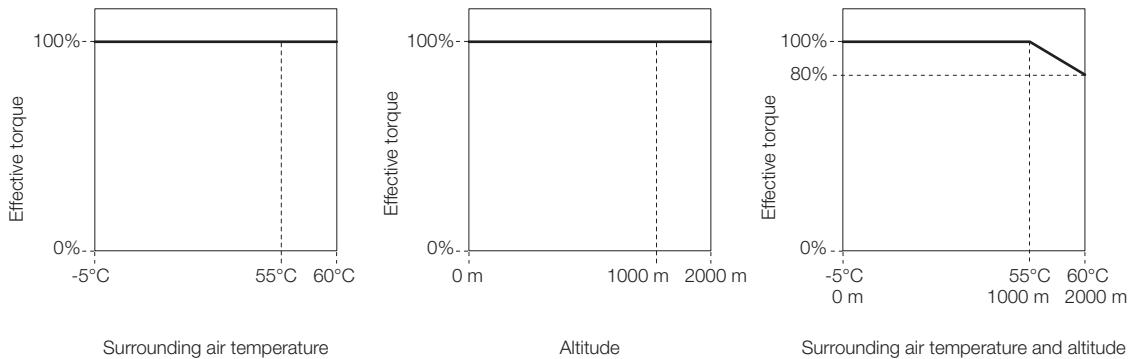

## Derating Specifications

If you use the SERVOPACK at a surrounding air temperature of 55°C to 60°C or at an altitude of 1,000 m to 2,000 m, you must apply the derating rates given in the following graphs.

### SGD7S-R70A, -R90A, -1R6A, -2R8A, -R70F, -R90F, -2R1F, and -2R8F

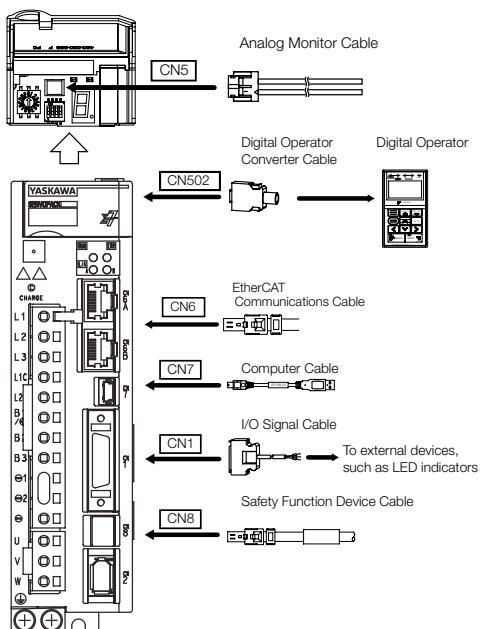

### SGD7S-3R8A, -5R5A, -7R6A, -120A, -180A, -200A, -330A, -470A, -550A, -590A, and -780A

## Selecting Cables SGD7S EtherCAT

### System Configurations

### Selection Table

1. Use the cable specified by YASKAWA for the Computer Cable. Operation may not be dependable with any other cable.
2. Use the cable specified by YASKAWA for the MECHATROLINK Communications Cables. Operation may not be dependable due to low noise resistance with any other cable.

Refer to the following manual for the following information:

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables  
Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

	Connector Kit <sup>5</sup>		Contact Tyco Electronics Japan G.K. Product name: Industrial Mini I/O D-shape Type 1 Plug Connector Kit Model number: 2013595-1	

\*1. This Converter Cable is required to use the Sigma-III-series Digital Operator (JUSP-OP05A) for S-7-series SERVOPACKS.

\*2. If you use a MECHATROLINK-III Communications Reference SERVOPACK, this Converter Cable is required to prevent the cable from disconnecting from the Digital Operator.

\*3. This cable is available in two variants. The order number for these cables differs at the marked □, an „R“ at this place is used for Cables with RJ45 Connectors on both ends, while an „M“ is used for Cables with RJ45 Connector on One End and IMI Connector on the other End.

\*4. When using safety functions, connect this Cable to the safety function devices.

When not using safety functions, connect the enclosed Safety Jumper Connector (JZSP-CVH05-E) to the SERVOPACK.

\*5. Use the Connector Kit when you make cables yourself.

## SERVOPACK Main Circuit Wires

**Important**

These specifications are based on IEC/EN 61800-5-1, UL 61800-5-1, and CSA C22.2 No.274.

1. To comply with UL standards, use UL-compliant wires.
2. Use copper wires with a rated temperature of 75° or higher.
3. Use copper wires with a rated withstand voltage of 300 V or higher.

## Note:

To use 600-V heat-resistant polyvinyl chloride-insulated wire (HIV), use the following table as reference for the applicable wires.

- The specified wire sizes are for three bundled leads when the rated current is applied with a surrounding air temperature of 40°C.
- Select the wires according to the surrounding air temperature.

### Three-phase, 200-VAC Wires for Sigma-7S SERVOPACKs

SGD7S-	Terminals	Wire Size	Screw Size	Tightening Torque [Nm]
R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A	Main Circuit Power Supply Cable	L1, L2, L3		
	Servomotor Main Circuit Cable*	U, V, W	AWG16 (1.25 mm <sup>2</sup> )	—
	Control Power Supply Cable	L1C, L2C

Code	Specifications	Applicable Models
008	Single-phase, 200 V power input	SGD7S-120A

Note:

Depending on configuration choices made, the model code might end after the 7th or 10th digit, or involve all 13 digits.

Readily available up to 1.5kW. Others available on request.

Additional accessories and software for SERVOPACKs is described in the Periphery section.

Note:

\*1. You can use these models with either a single-phase or three-phase power supply input.

\*2. A model with a single-phase, 200-VAC power supply input is available as a hardware option (model. SGD7S-120A00A008).

\*3. The rated output is 2.4 kW if you combine the SGM7G-30A with the SGD7S-200A.

\*4. The same SERVOPACKs are used for both Rotary Servomotors and Linear Servomotors.

\*5. A command option module must be attached to the Command Option Attachable-type SERVOPACK for use.

\*6. Refer to the following manual for details.

Overvoltage Category		III					

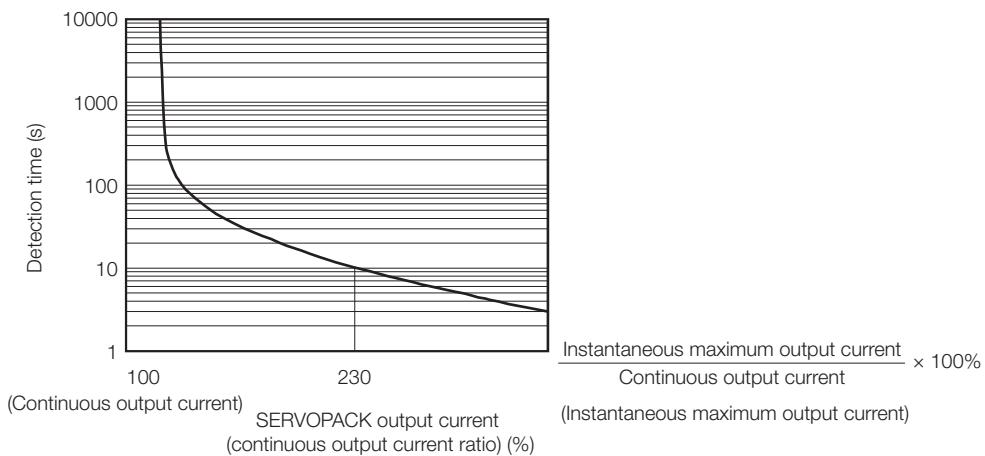

\* This is the net value at the rated load.

## SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C. An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed. The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

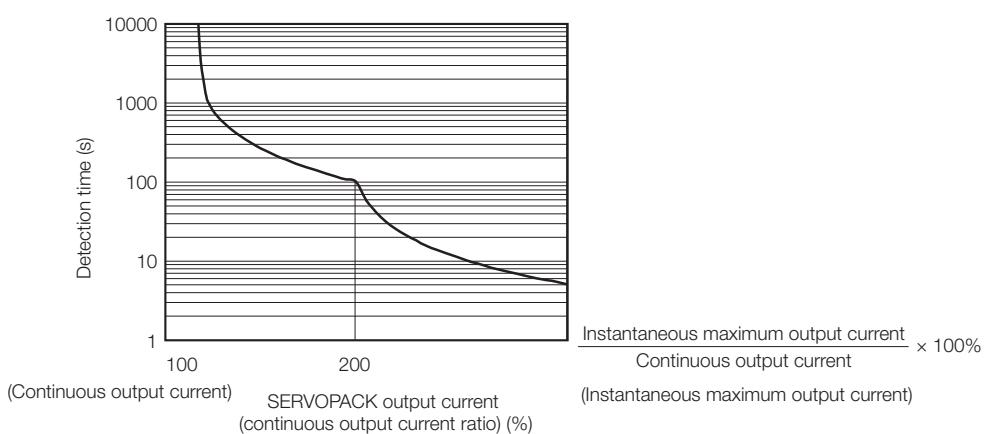

### SGD7S-R70A, -R90A, -1R6A, -2R8A

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. For a YASKAWA-specified combination of SERVOPACK and Servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic of the Servomotor.

### SGD7S-5R5A, -120A

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. For a YASKAWA-specified combination of SERVOPACK and Servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic of the Servomotor.

## Specifications using PROFINET Communication Reference

Item	Specification	
Control Method	IGBT-based PWM control, sine wave current drive	
Feedback	With Rotary Servomotor	Serial encoder: 24 bits (incremental encoder/absolute encoder) <ul style="list-style-type: none"> <li>Absolute linear encoder (The signal resolution depends on the absolute linear encoder.)</li> <li>Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.)</li> </ul>
	With Linear Servomotor	-5°C to 55°C (60°C with derating) However, the range for the SGD7S-370D is -5°C to 40°C.
Environmental Conditions	Surrounding Air Temperature*1	-20°C to 85°C
	Storage Temperature	95 % relative humidity max. (with no freezing or condensation)
	Surrounding Air Humidity	95 % relative humidity max. (with no freezing or condensation)
	Storage Humidity	4.9 m/s <sup>2</sup>
	Vibration Resistance	19.6 m/s <sup>2</sup>
	Shock Resistance	IP10
	Degree of Protection	2
	Pollution Degree	<ul style="list-style-type: none"> <li>Must be no corrosive or flammable gases.</li> <li>Must be no exposure to water, oil, or chemicals.</li> <li>Must be no dust, salts, or iron dust.</li> </ul>
	Altitude	1,000 m or less (above 1,000 m with derating)
	Others	Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity Refer to the section Compliance with UL Standards, EU Directives, and Other Safety Standards (in Combination with SERVOPACK).
Applicable Standards		
Mounting	Base-mounted	
Performance	Speed Control Range	1:5,000 (At the rated torque, the lower limit of the speed control range must not cause the Servomotor to stop.) ±0.01 % of rated speed max. (for a load fluctuation of 0 % to 100 %)
	Coefficient of Speed Fluctuation*2	0% of rated speed max. (for a voltage fluctuation of ±10 %) ±0.1 % of rated speed max. (for a temperature fluctuation of 25 °C ±25 °C)
	Torque Control Precision (Repeatability)	±1 %
	Soft Start Time Setting	0s to 10s (Can be set separately for acceleration and deceleration.)
I/O Signals	Encoder Divided Pulse Output	Phase A, phase B, phase C: Line-driver output Number of divided output pulses: Any setting is allowed
	Linear Servomotor Overheat Protection Signal Input	Number of input points: 1 Input voltage range: 0 V to +5 V
	Sequence Input Signals	Allowable voltage range: 24 VDC ±20 % Number of input points: 7 Input method: Sink inputs or source inputs Input Signals <ul style="list-style-type: none"> <li>P-OT (Forward Drive Prohibit) and N-OT (Reverse Drive Prohibit) signals</li> <li>/EXT1 (Probe 1 Latch Input) signal</li> <li>/EXT2 (Probe 2 Latch Input) signal</li> <li>/DEC (Home Switch Input) signal</li> <li>/P-CL (Forward External Torque Limit) and /N-CL (Reverse External Torque Limit) signals</li> <li>/SI0 and /SI6 (General-Purpose Input) signals</li> </ul> A signal can be allocated and the positive and negative logic can be changed.
		Allowable voltage range: 5 VDC to 30 VDC Number of output points: 1 Output signal: ALM (Servo Alarm) signal
	Sequence Output Signals	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 5 (A photocoupler output (isolated) is used.) Output Signals <ul style="list-style-type: none"> <li>/COIN (Positioning Completion) signal</li> <li>/V-CMP (Speed Coincidence Detection) signal</li> <li>/TGON (Rotation Detection) signal</li> <li>/S-RDY (Servo Ready) signal</li> <li>/CLT (Torque Limit Detection) signal</li> <li>/VLT (Speed Limit Detection) signal</li> <li>/BK (Brake) signal</li> <li>/WARN (Warning) signal</li> <li>/NEAR (Near) signal</li> </ul> A signal can be allocated and the positive and negative logic can be changed.
		Digital Operator (JUSP-OP05A-1-E) Up to N = 15 stations possible for RS-422A port Set with parameters.
	RS-422A Communications (CN502)	Personal Computer (with SigmaWin+) The software version of the SigmaWin+ must be version 7.28 or higher.
		Conforms to USB 2.0 standard (12 Mbps).
Communications	USB Communications (CN7)	Interface
		Communications Standard

# SGD7S PROFINET

Continued from previous page.

Item	Specification
Displays/Indicators	CHARGE, PWR, RUN, ERR, and L/A (A and B) indicators, and one-digit seven-segment display
PROFINET Communications	Applicable Communications Standards IEC 61158 Type 12, IEC 61800-7 PROFIdrive Profile, Ethernet PROFINET IO RT
	Physical Layer 100BASE-TX (IEEE 802.3)
	Communications Connectors CN6A (RJ45): PROFINET signal input connector CN6B (RJ45): PROFINET signal output connector Full-duplex, Auto-negotiation, Auto-crossover
	Cable Category 5, 4 shielded twisted pairs * The cable is automatically detected with AUTO MDIX.
	Baud Rate Setting 100MBit/s
	Supported Protocols <ul style="list-style-type: none"> <li>• RTC - Real time cyclic protocol - RT class 1 (unsynchronized)</li> <li>• RTA - Real time acyclic protocol</li> <li>• DCP - Discovery and configuration protocol</li> <li>• CL-RPC - Connectionless remote procedure call</li> <li>• LLDP - Link layer discovery protocol</li> <li>• SNMP - Simple network management protocol</li> </ul>
	Node Address Setting DCP
	Identification & Maintenance Functions I&MO-3
	Topology Recognition LLDP, SNMP V1, MIB2
	Power Supply 5V ± 5%, 500mA (max.) supplied internal from drive CN10
	LED Indicator Red (ERR), Green (RUN), PROFINET communicating (L/A) × 2
	Node Type Axis Drive Unit
	Acyclic Parameter Access Read/Write Record
	Cyclic Messaging Set of pre-defined standard telegram: ST1, ST2, ST7, ST8, ST9 Set of pre-defined manufacturer telegram: Telegram number 100 Telegram mapping: Dynamic with max. 16 signal entries of free telegram number 999
	Alarm Notification PDU Optional
PROFIdrive Profile	Standard IEC 61800-7-1/2/3
	Motor Type / Axis Type Servo / Rotary, Linear
	Profile Services Cycle messaging, Acyclic parameter access mechanism, Identification & maintenance functions (I&M03), PROFIdrive parameters, Diagnostic and alarm mechanism, Fault buffer mechanism
	Application Classes 1, 3
	PROFIdrive Position and Velocity Modes Motion profile type: Linear
	CIA402 Supported methods: 1-6, 17-22, 35, 33, 34 Motion profile type: Linear Homing persistent in absolute motor encoder
	CIA402 Torque Mode Torque Profile Type: Linear <ul style="list-style-type: none"> <li>• Homing Mode</li> <li>• PROFIdrive Position Mode</li> <li>• PROFIdrive Velocity Mode</li> <li>• Profile Torque Mode</li> <li>• Touch Probe Function</li> <li>• Torque Limit Function</li> </ul>
Drive Profile	Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA Settling time (±1%): 1.2 ms (Typ)
Analog Monitor (CN5)	Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.
Dynamic Brake (DB)	Built-in. Refer to the catalog for details.
Regenerative Processing	Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit) or N-OT (Reverse Drive Prohibit) signal
Overtravel (OT) Prevention	Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.
Protective Functions	
Utility Functions	Gain adjustment, alarm history, jogging, origin search, etc.
Safety Functions	Inputs /HWBB1 and /HWBB2: Base block signals for Power Modules
	Output EDM1: Monitors the status of built-in safety circuit (fixed output).
	Applicable Standards* <sup>3</sup> ISO13849-1 PLe (Category 3), IEC61508 SIL3
Applicable Option Modules	Fully-closed Modules, Option Module Safety

\*1. If you combine a Sigma-7 SERVOPACK with a Sigma-V Option Module, the surrounding air temperature specification of the Sigma-V SERVOPACKs must be used, i.e., 0 °C to 55 °C. Also, the applicable surrounding range cannot be increased by derating.

\*2. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

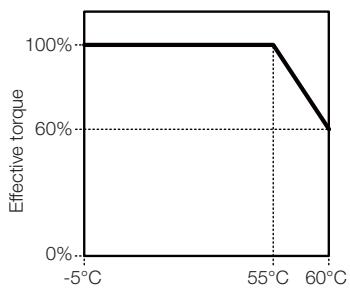

\*3. The SGD7S-210D, -260D, -280D, and -370D do not have a dynamic brake (DB). If a dynamic brake is necessary, create an external dynamic brake circuit.

\*4. Always perform risk assessment for the system and confirm that the safety requirements are met.

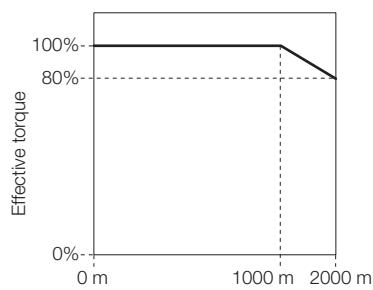

## Derating Specifications

If you use the SERVOPACK at a surrounding air temperature of 55°C to 60°C or at an altitude of 1,000 m to 2,000 m, you must apply the derating rates given in the following graphs.

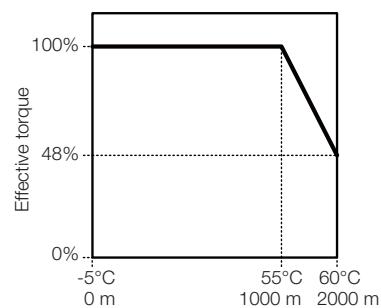

### SGD7S-R70A, -R90A, -1R6A, -2R8A

Surrounding air temperature

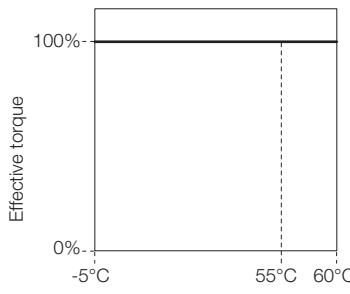

Altitude

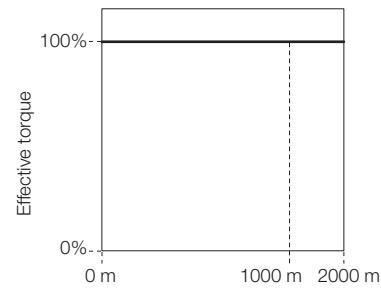

Surrounding air temperature and altitude

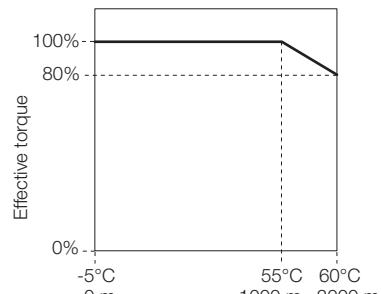

### SGD7S-5R5A, -120A

Surrounding air temperature

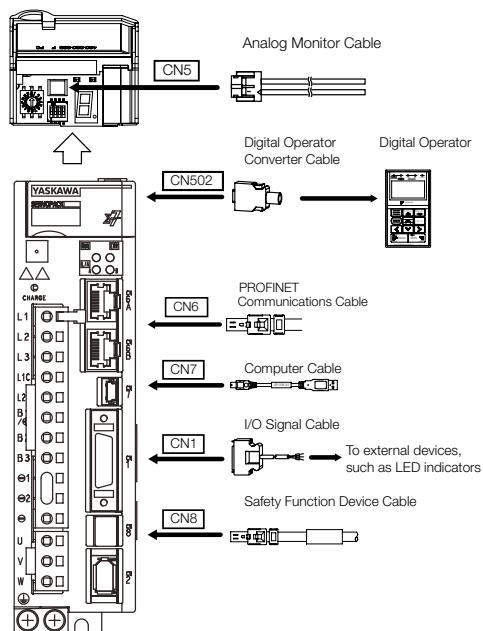

Altitude

Surrounding air temperature and altitude

## Selecting Cables SGD7S PROFINET

### System Configurations

### Selection Table

1. Use the cable specified by YASKAWA for the Computer Cable. Operation may not be dependable with any other cable.
2. Use the cable specified by YASKAWA for the MECHATROLINK Communications Cables. Operation may not be dependable due to low noise resistance with any other cable.

Refer to the following manual for the following information:

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables  
Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

\*1. This Converter Cable is required to use the Sigma-III-series Digital Operator (JUSP-OOP05A) for S-7-series SERVOPACKs.

\*2. If you use a MECHATROLINK-III Communications Reference SERVOPACK, this Converter Cable is required to prevent the cable from disconnecting from the Digital Operator.

\*3. This cable is available in two variants. The order number for these cables differs at the marked □, an „R“ at this place is used for Cables with RJ45 Connectors on both ends, while an „M“ is used for Cables with RJ45 Connector on One End and IMI Connector on the other End.

\*4. When using safety functions, connect this Cable to the safety function devices.

When not using safety functions, connect the enclosed Safety Jumper Connector (JZSP-CVH05-E) to the SERVOPACK.

\*5. Use the Connector Kit when you make cables yourself.

## SERVOPACK Main Circuit Wires

**Important**

These specifications are based on IEC/EN 61800-5-1, UL 61800-5-1, and CSA C22.2 No.274.

1. To comply with UL standards, use UL-compliant wires.
2. Use copper wires with a rated temperature of 75° or higher.
3. Use copper wires with a rated withstand voltage of 300 V or higher.

## Note:

To use 600-V heat-resistant polyvinyl chloride-insulated wire (HIV), use the following table as reference for the applicable wires.

- The specified wire sizes are for three bundled leads when the rated current is applied with a surrounding air temperature of 40°C.
- Select the wires according to the surrounding air temperature.

### Three-phase, 200-VAC Wires for Sigma-7S SERVOPACKs

SGD7S-	Terminals	Wire Size	Screw Size	Tightening Torque [Nm]

Note:

Additional accessories and software for SERVOPACKs is described in the Periphery section.

\*1. You can use these models with either a single-phase or three-phase power supply input. For more information, please contact your YASKAWA representative.

\*2. If you use the Servomotor with a single-phase 200-VAC power supply input, derate the load ratio to 65%.

An example is given below. If the load ratio of the first axis is 90%, use a load ratio of 40% for the second axis so that average load ratio for both axes is 65%.

((90% + 40%)/2 = 65%)

\*3. The same SERVOPACKs are used for both Rotary Servomotors and Linear Servomotors.

\*4. Refer to the following manual for details.

Sigma-7-Series AC Servo Drive Sigma-7W/Sigma-7C SERVOPACK with Hardware Option Specifications HWBB Function Product Manual (Manual No.: SIEP S800001 72)

## Ratings and Specifications

### Ratings

#### Single-phase, 200 VAC

Model SGD7W-		1R6A	2R8A	5R5A*1
Maximum Applicable Motor Capacity per Axis [kW]		0.2	0.4	0.75
Continuous Output Current per Axis [A]		1.6	2.8	5.5
Instantaneous Maximum Output Current per Axis [A]		5.9	9.3	16.9
Main Circuit	Power Supply	200 VAC to 240 VAC, -15% to +10%, 50 Hz/60 Hz		
	Input Current [A]*2	5.5	11	12
Control	Power Supply	200 VAC to 240 VAC, -15% to +10%, 50 Hz/60 Hz		
	Input Current [A]*2	0.25	0.25	0.25
Power Supply Capacity [kVA]*2		1.3	2.4	2.7
Power Loss*2	Main Circuit Power Loss [W]	24.1	43.6	54.1
	Control Circuit Power Loss [W]	17	17	17
	Built-in Regenerative Resistor Power Loss [W]	8	8	16
	Total Power Loss [W]	49	69	87
Regenerative Resistor	Built-In Regenerative Resistor	40	40	12
	Capacity [W]	40	40	60
	Minimum Allowable External Resistance [Ω]	40	40	12
Overvoltage Category		III		

\*1. If you use the SGD7W-5R5A with a single-phase 200-VAC power supply input, derate the load ratio to 65%. An example is given below.

If the load ratio of the first axis is 90%, use a load ratio of 40% for the second axis so that average load ratio for both axes is 65%  
 $((90\% + 40\%)/2 = 65\%)$ .

\*2. This is the net value at the rated load. However, a load ratio of 65% was used for the SGD7W-5R5A.

#### Three-phase, 200 VAC

Model SGD7W-		1R6A	2R8A	5R5A	7R6A
Maximum Applicable Motor Capacity per Axis [kW]		0.2	0.4	0.75	1.0
Continuous Output Current per Axis [A]		1.6	2.8	5.5	7.6
Instantaneous Maximum Output Current per Axis [A]		5.9	9.3	16.9	17.0
Main Circuit	Power Supply	200 VAC to 240 VAC, -15% to +10%, 50 Hz/60 Hz			
	Input Current [A]*	2.5	4.7	7.8	11
Control	Power Supply	200 VAC to 240 VAC, -15% to +10%, 50 Hz/60 Hz			
	Input Current [A]*	0.25	0.25	0.25	0.25
Power Supply Capacity [kVA]*		1.0	1.9	3.2	4.5
Power Loss*	Main Circuit Power Loss [W]	24.0	43.3	78.9	94.2
	Control Circuit Power Loss [W]	17	17	17	17
	Built-in Regenerative Resistor Power Loss [W]	8	8	16	16
	Total Power Loss [W]	49	68	112	127
Regenerative Resistor	Built-In Regenerative Resistor	40	40	12	12
	Capacity [W]	40	40	60	60
	Minimum Allowable External Resistance [Ω]	40	40	12	12
Overvoltage Category		III			

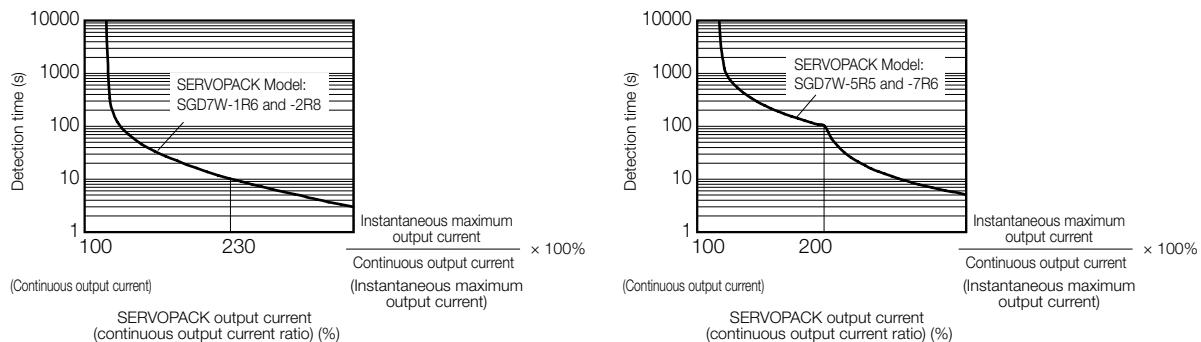

\* This is the net value at the rated load.

Note: For more information on Three-phase models, please contact your YASKAWA representative.

## SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C. An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed. The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. For a YASKAWA-specified combination of SERVOPACK and Servomotor, maintain the effective torque (or effective force) within the continuous duty zone of the torque-motor speed characteristic (or force-motor speed characteristics) of the Servomotor.

## Specifications

Item	Specification	
Control Method	IGBT-based PWM control, sine wave current drive	
Feedback	With Rotary Servomotor	Serial encoder: 17 bits (absolute encoder) 20 bits or 24 bits (incremental encoder/absolute encoder) 22 bits (absolute encoder)
	With Linear Servomotor	<ul style="list-style-type: none"> <li>Absolute linear encoder (The signal resolution depends on the absolute linear encoder.)</li> <li>Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.)</li> </ul>
Environmental Conditions	Ambient Air Temperature	-5°C to 55°C With derating, usage is possible between 55°C and 60°C. Refer to the following section for Derating Specifications.
	Storage Temperature	-20°C to 85°C
	Ambient Air Humidity	95% relative humidity max. (with no freezing or condensation)
	Storage Humidity	95% relative humidity max. (with no freezing or condensation)
	Vibration Resistance	4.9 m/s <sup>2</sup>
	Shock Resistance	19.6 m/s <sup>2</sup>
	Protection Class	IP 20
	Pollution Degree	2 <ul style="list-style-type: none"> <li>Must be no corrosive or flammable gases.</li> <li>Must be no exposure to water, oil, or chemicals.</li> <li>Must be no dust, salts, or iron dust.</li> </ul>
	Altitude	1,000 m or less With derating, usage is possible between 1,000 m and 2,000 m. Refer to the following section for Derating specifications.
	Others	Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity UL 61800-5-1 (E147823), CSA C22.2 No.274, EN 55011 group 1 class A, EN 61000-6-2, EN 61000-6-4, EN 61800-3 (Category C2, Second environment), EN 50178, and EN 61800-5-1
Applicable Standards		
Mounting	Base-mounted or rack-mounted	
Performance	Speed Control Range	1:5,000 (At the rated torque, the lower limit of the speed control range must not cause the Servomotor to stop.)
	Coefficient of Speed Fluctuation*	±0.01% of rated speed max. (for a load fluctuation of 0% to 100%) 0% of rated speed max. (for a voltage fluctuation of ±10%) ±0.1% of rated speed max. (for a temperature fluctuation of 25°C ± 25°C)
	Torque Control Precision (Repeatability)	±1%
	Soft Start Time Setting	0 s to 10 s (Can be set separately for acceleration and deceleration.)

Item	Specification	
Overheat Protection Input		Number of input points: 2 Input voltage range: 0 V to +5 V Allowable voltage range: 24 VDC ±20%
Sequence Input Signals	Input Signals That Can Be Allocated	Number of input points: 12 Input method: Sink inputs or source inputs Input Signals <ul style="list-style-type: none"> <li>● P-OT (Forward Drive Prohibit) and N-OT (Reverse Drive Prohibit) signals</li> <li>● /P-CL (Forward External Torque Limit) and /N-CL (Reverse External Torque Limit) signals</li> <li>● /DEC (Origin Return Deceleration Switch) signal</li> <li>● /EXT1 to /EXT3 (External Latch Input 1 to 3) signals</li> <li>● FSTP (Forced Stop Input) signal</li> </ul> A signal can be allocated and the positive and negative logic can be changed.
I/O Signals	Fixed Output	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 2 Output signal: Servo Alarm (ALM)
Sequence Output Signals		Allowable voltage range: 5 VDC to 30 VDC Number of output points: 3 (A photocoupler output (isolated) is used.) Output Signals: <ul style="list-style-type: none"> <li>● /COIN (Positioning Completion) signal</li> <li>● /V-CMP (Speed Coincidence Detection) signal</li> <li>● /TGON (Rotation Detection) signal</li> <li>● /S-RDY (Servo Ready) signal</li> <li>● /CLT (Torque Limit Detection) signal</li> <li>● /VLT (Speed Limit Detection) signal</li> <li>● /BK (Brake) signal</li> <li>● /WARN (Warning) signal</li> <li>● /NEAR (Near) signal</li> </ul> A signal can be allocated and the positive and negative logic can be changed.
Communications	RS-422A Communications (CN3)	Interfaces Digital Operator (JUSP-OP05A-1-E) and personal computer (with SigmaWin+)
	1:N Communications	Up to N = 15 stations possible for RS-422A port
Displays/ Indicators	Axis Address Setting	03 to EF hex (maximum number of slaves: 62) The rotary switches (S1 and S2) are used to set the station address.
	USB Communications (CN7)	Personal Computer (with SigmaWin+)
CHARGE, PWR, COM, L1, and L2 indicators, and one-digit seven-segment displays		Conforms to USB 2.0 standard (12 Mbps).
MECHATROLINK-III Communications	Communications Protocol	MECHATROLINK-III
	Station Address Settings	03 to EF hex (maximum number of slaves: 62) The rotary switches (S1 and S2) are used to set the station address.
	Extended Address Setting	Axis 1: 00 hex, Axis 2: 01 hex
	Baud Rate	100 Mbps
	Transmission Cycle	250 µs, 500 µs, 750 µs, 1.0 ms to 4.0 ms (multiples of 0.5 ms) 32 or 48 bytes/station
Number of Transmission Bytes		A DIP switch (S3) is used to select the baud rate.
Reference Method	Performance	Position, speed, or torque control with MECHATROLINK-III communications
	Reference Input	MECHATROLINK-III commands (sequence, motion, data setting, data access, monitoring, adjustment, etc.)
	Profile	MECHATROLINK-III standard servo profile
MECHATROLINK-III Communications Setting Switches		Rotary switch (S1 and S2) positions: 16 Number of DIP switch (S3) pins: 4

Item	Specification
Analog Monitor (CN5)	Number of points: 2 Output voltage range: $\pm 10$ VDC (effective linearity range: $\pm 8$ V) Resolution: 16 bits Accuracy: $\pm 20$ mV (Typ) Maximum output current: $\pm 10$ mA Settling time ( $\pm 1\%$ ): 1.2 ms (Typ)
Dynamic Brake (DB)	Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.
Regenerative Processing	Built-in
Overtravel (OT) Prevention	Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit) or N-OT (Reverse Drive Prohibit) signal
Protective Functions	Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.
Utility Functions	Gain adjustment, alarm history, jogging, origin search, etc.
Option Modules	Option Modules cannot be attached.

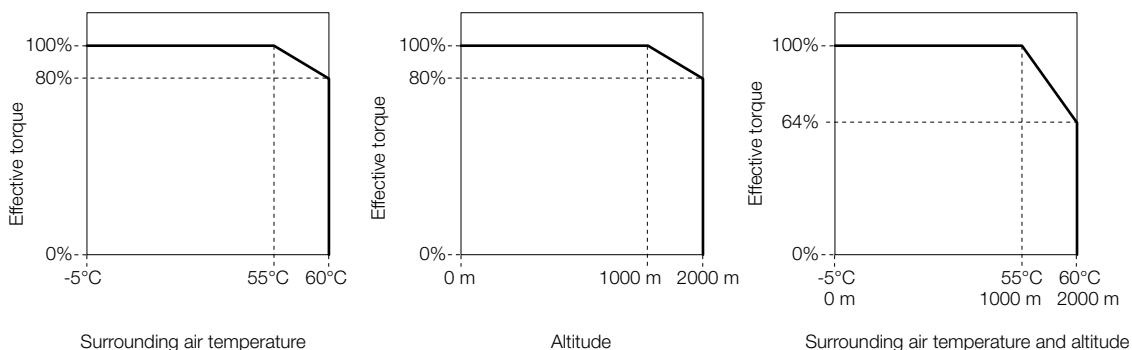

\* The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

## Derating Specifications

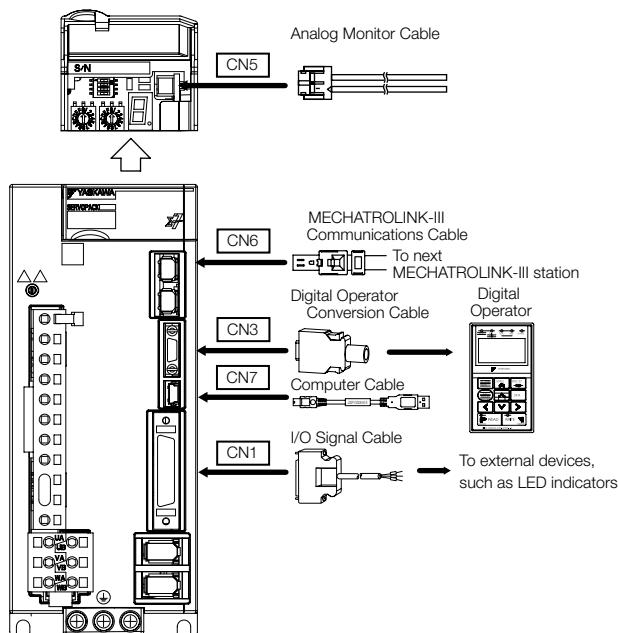

If you use the SERVOPACK at a surrounding air temperature of 55°C to 60°C or at an altitude of 1,000 m to 2,000 m, you must apply the derating rates given in the following graphs.

### SGD7W-1R6A, -2R8A, -5R5A, and -7R6A

# Selecting Cables SGD7W MECHATROLINK-III

## System Configurations

## Selection Table

Important

1. Use the cable specified by YASKAWA for the Computer Cable. Operation may not be dependable with any other cable.
2. Use the cable specified by YASKAWA for the MECHATROLINK Communications Cables. Operation may not be dependable due to low noise resistance with any other cable.

Refer to the following manual for the following information.

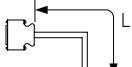

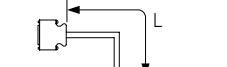

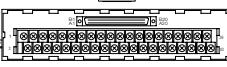

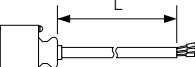

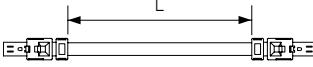

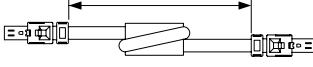

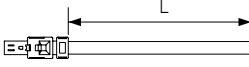

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables  
Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

Code	Description	Length	Order Number	Appearance
CN5	Analog Monitor Cable	1 m	JZSP-CA01-E	
CN3	Digital Operator	0.3m	JUSP-0P05A-1-E	
	Digital Operator Converter Cable		JZSP-CVS05-A3-E <sup>1</sup>	
			JZSP-CVS07-A3-E <sup>2</sup>	
CN7	Computer Cable	2.5 m	JZSP-CVS06-02-E	

Continued on next page.

# SGD7W MECHATROLINK-III

Continued from previous page.

Code	Description	Length	Order Number	Appearance
CN1	I/O Signal Cables	Soldered Connector Kit	DP9420007-E	
		0.5 m	JUSP-TA36P-E	
		1 m	JUSP-TA36P-1-E	
		Connector-Terminal Block Converter Unit (with cable)	2 m	
		1 m	JZSP-CSI03-1-E	
		2 m	JZSP-CSI03-2-E	
		3 m	JZSP-CSI03-3-E	
		Cable with Loose Wires at One End (loose wires on peripheral device end)		
CN6	MECHATROLINK-III Communications Cables	Cables with Connectors on both Ends	0.2 m 0.5 m 1 m 2 m 3 m 4 m 5 m 10 m 20 m 30 m 50 m	
		Cables with Connectors on both Ends (with core)	10 m 20 m 30 m 50 m

\*1. This Converter Cable is required to use the S-III-series Digital Operator (JUSP-OP05A) for S-7-series SERVOPACKs.

\*2. If you use a MECHATROLINK-III Communications Reference SERVOPACK, this Converter Cable is required to prevent the cable from disconnecting from the Digital Operator.

## SERVOPACK Main Circuit Wires

**Important**

These specifications are based on IEC/EN 61800-5-1, UL 61800-5-1, and CSA C22.2 No.274.

1. To comply with UL standards, use UL-compliant wires.
2. Use copper wires with a rated temperature of 75° or higher.
3. Use copper wires with a rated withstand voltage of 300 V or higher.

**Note:**

To use 600-V heat-resistant polyvinyl chloride-insulated wire (HIV), use the following table as reference for the applicable wires.

- The specified wire sizes are for three bundled leads when the rated current is applied with a surrounding air temperature of 40°C.
- Select the wires according to the surrounding air temperature.

### Three-phase, 200-VAC Wires for Sigma-7S SERVOPACKs

SGD7S-	Terminals	Wire Size	Screw Size	Tightening Torque [Nm]

7th digit - Design Revision Order	
Code	Specifications
A	Standard Model

Note:  
Additional accessories and software for SERVOPACKs is described in the Periphery section.

\*1. You can use these models with either a single-phase or three-phase power supply input.

\*2. If you use the Servomotor with a single-phase 200-VAC power supply input, derate the load ratio to 65%. An example is given below.

If the load ratio of the first axis is 90%, use a load ratio of 40% for the second axis so that average load ratio for both axes is 65%.  $((90\% + 40\%)/2 = 65\%)$

\*3. The same SERVOPACKs are used for both Rotary Servomotors and Linear Servomotors.

\*4. Refer to the following manual for details.

Sigma-7-Series AC Servo Drive Sigma-7W/Sigma-7C SERVOPACK with Hardware Option Specifications HWBB Function Product Manual (Manual No.: SIEP S800001 72)

# Ratings and Specifications

## Ratings

### Single-phase, 200 VAC

Model SGD7C-		1R6A	2R8A	5R5A <sup>1</sup>
Maximum Applicable Motor Capacity per Axis [kW]		0.2	0.4	0.75
Continuous Output Current per Axis [A]		1.6	2.8	5.5
Instantaneous Maximum Output Current per Axis [A]		5.9	9.3	16.9
Main Circuit	Power Supply	200 VAC to 240 VAC, -15% to +10%, 50 Hz/60 Hz		
	Input Current [A] <sup>2</sup>	5.5	11	12
Control	Power Supply	200 VAC to 240 VAC, -15% to +10%, 50 Hz/60 Hz		
	Input Current [A] <sup>2</sup>	0.25		
Power Supply Capacity [kVA] <sup>2</sup>		1.3	2.4	2.7
Power Loss <sup>2</sup>	Main Circuit Power Loss [W]	24.1	43.6	54.1
	Control Circuit Power Loss [W]	17		
Regenerative Resistor	Built-in Regenerative Resistor Power Loss [W]	8	16	
	Total Power Loss [W]	49	69	87
	Minimum Allowable External Resistance [Ω]	40	12	
Overvoltage Category		III		

\*1. If you use the SGD7C-5R5A with a single-phase 200-VAC power supply input, derate the load ratio to 65%.

An example is given below. If the load ratio of the first axis is 90%, use a load ratio of 40% for the second axis so that average load ratio for both axes is 65% ((90% + 40%)/2 = 65%).

\*2. This is the net value at the rated load. However, a load ratio of 65% was used for the SGD7W-5R5A.

### Three-phase, 200 VAC

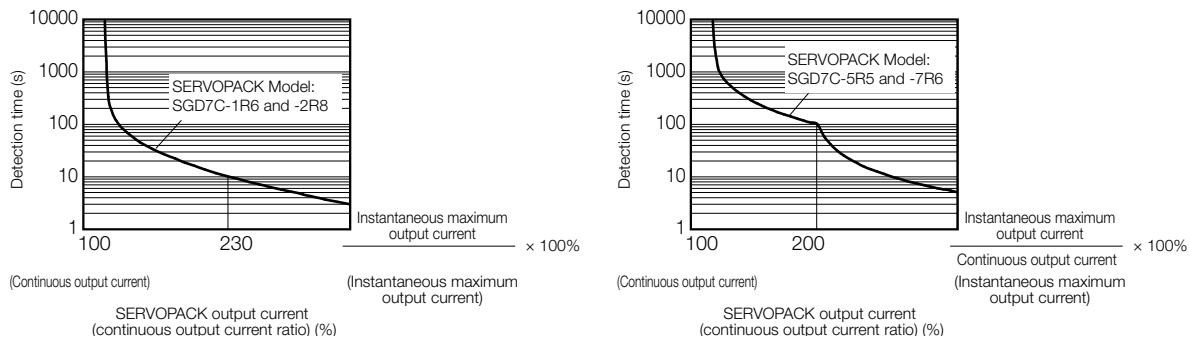

Model SGD7C-		1R6A	2R8A	5R5A	7R6A
Maximum Applicable Motor Capacity per Axis [kW]		0.2	0.4	0.75	1.0
Continuous Output Current per Axis [A]		1.6	2.8	5.5	7.6
Instantaneous Maximum Output Current per Axis [A]		5.9	9.3	16.9	17.0
Main Circuit	Power Supply	200 VAC to 240 VAC, -15% to +10%, 50 Hz/60 Hz			
	Input Current [A]*	2.5	4.7	7.8	11
Control	Power Supply	200 VAC to 240 VAC, -15% to +10%, 50 Hz/60 Hz			
	Input Current [A]*	0.25			
Power Supply Capacity [kVA]*		1.0	1.9	3.2	4.5
Power Loss*	Main Circuit Power Loss [W]	24.0	43.3	78.9	94.2
	Control Circuit Power Loss [W]	17			
Regenerative Resistor	Built-in Regenerative Resistor Power Loss [W]	8	16		
	Total Power Loss [W]	49	68	112	127
	Minimum Allowable External Resistance [Ω]	40	12		
Overvoltage Category		III			

\*This is the net value at the rated load.

## SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C. An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed. The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. For a YASKAWA-specified combination of SERVOPACK and Servomotor, maintain the effective torque (or effective force) within the continuous duty zone of the torque-motor speed characteristic (or force-motor speed characteristics) of the Servomotor.

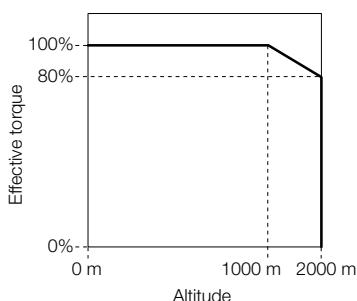

## General Specifications

Item	Specification		
Control Method	IGBT-based PWM control, sine wave current drive		
Feedback	With Rotary Servomotor	Serial encoder: 17 bits (absolute encoder) 20 bits or 24 bits (incremental encoder/absolute encoder) 22 bits (absolute encoder)	
	With Linear Servomotor	• Absolute linear encoder (The signal resolution depends on the absolute linear encoder.) • Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.)	
Ambient Air Temperature	0°C to 55°C		
Storage Temperature	-20°C to 85°C		
Ambient Air Humidity	10 % to 95% relative humidity max. (with no freezing or condensation)		
Storage Humidity	10 % to 95% relative humidity max. (with no freezing or condensation)		
Vibration Resistance	4.9 m/s <sup>2</sup>		
Shock Resistance	19.6 m/s <sup>2</sup>		
Degree of Protection	IP 20		
Environmental Conditions	2	<ul style="list-style-type: none"> <li>Must be no corrosive or flammable gases.</li> <li>Must be no exposure to water, oil, or chemicals.</li> <li>Must be no dust, salts, or iron dust.</li> </ul>	
	Pollution Degree		
Altitude	1,000 m or less With derating, usage is possible between 1,000 m and 2,000 m. Refer to the Derating Specifications section.		
Power Frequency Magnetic Field	30 A/m (50 Hz/60 Hz), IEC 61000-4-8, Level 4		
Others	Must be no exposure to electrostatic noise or radiation.		
Applicable Standards	UL 61800-5-1 (E147823), CSA C22.2 No.274, EN 55011 group 1 class A, EN 61000-6-2, EN 61000-6-4, EN 61800-3 (Category C2, Second environment), EN 50178, and EN 61800-5-1		
Mounting	Base-mounted or rack-mounted		

## Derating Specifications

If you use the SERVOPACK at an altitude of 1,000 m to 2,000 m, you must apply the derating rates given in the following graph.

### SGD7C-1R6A, -2R8A, -5R5A, and -7R6A

## Servo Section Specifications

Item		Specification	
Performance	Speed Control Range	1:5,000 (At the rated torque, the lower limit of the speed control range must not cause the Servomotor to stop.)	
	Coefficient of Speed Fluctuation*	±0.01% of rated speed max. (for a load fluctuation of 0% to 100%)	
		0% of rated speed max. (for a load fluctuation of ±10%)	
	Torque Control Precision (Repeatability)	±0.1% of rated speed max. (for a temperature fluctuation of 25°C ±25°C)	
I/O Signals	Soft Start Time Setting	0 s to 10 s (Can be set separately for acceleration and deceleration.)	
	Overheat Protection Input	Number of input points: 2 Input voltage range (0 V to 5 V)	
	Sequence Input Signals	Input Signals that can be allocated	Allowable voltage range: 24 VDC ±20% Number of input points: 12 Input method: Sink inputs or source inputs Input Signals: <ul style="list-style-type: none"><li>• P-OT (Forward Drive Prohibit Input) and N-OT (Reverse Drive Prohibit Input) signals</li><li>• /P-CL (Forward External Torque Limit) and /N-CL (Reverse External Torque Limit) signals</li><li>• /DEC (Origin Return Deceleration Switch) signal</li><li>• /EXT1 to /EXT3 (External Latch Input 1 to 3) signals</li><li>• FSTP (Forced Stop Input) signal</li></ul> A signal can be allocated and the positive and negative logic can be changed.
			Allowable voltage range: 5 VDC to 30 VDC Number of output points: 2 Output signal: ALM (Servo Alarm Output) signal
	Sequence Output Signals	Output Signals that can be allocated	Allowable voltage range: 5 VDC to 30 VDC Number of outputs points: 5 (Photocoupler outputs (isolated) are used.) Output Signals: <ul style="list-style-type: none"><li>• /COIN (Positioning Completion) signal</li><li>• /V-CMP (Speed Coincidence Detection) signal</li><li>• /TGON (Rotation Detection) signal</li><li>• /S-RDY (Servo Ready) signal</li><li>• /CLT (Torque Limit Detection) signal</li><li>• /VLT (Speed Limit Detection) signal</li><li>• /BK (Brake) signal</li><li>• /WARN (Warning) signal</li><li>• /NEAR (Near) signal</li></ul> A signal can be allocated and the positive and negative logic can be changed.
			Allowable voltage range: 5 VDC to 30 VDC Number of outputs points: 5 (Photocoupler outputs (isolated) are used.) Output Signals: <ul style="list-style-type: none"><li>• /COIN (Positioning Completion) signal</li><li>• /V-CMP (Speed Coincidence Detection) signal</li><li>• /TGON (Rotation Detection) signal</li><li>• /S-RDY (Servo Ready) signal</li><li>• /CLT (Torque Limit Detection) signal</li><li>• /VLT (Speed Limit Detection) signal</li><li>• /BK (Brake) signal</li><li>• /WARN (Warning) signal</li><li>• /NEAR (Near) signal</li></ul> A signal can be allocated and the positive and negative logic can be changed.
Communications	USB Communications (CN7)	Interface	Personal computer (with SigmaWin+)
		Communications Standard	Conforms to USB 2.0 standard (12 Mbps)
Displays/Indicators			CHARGE and PWR indicators, and two, one-digit seven-segment displays
Reference Method			Reference with built-in controller
Dynamic Brake (DB)			Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF
Regenerative Processing			Built-in
Overtravel (OT) Prevention			Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit Input) or N-OT (Reverse Drive Prohibit Input) signal
Protective Functions			Overcurrent, overvoltage, undervoltage, overload, regeneration error, etc.
Utility Functions			Gain adjustment, alarm history, jogging, origin search, etc.
Applicable Option Modules			None

\* The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

## Controller Section Specifications

### Hardware Specifications

Item	Specification
Flash Memory	Capacity: 24 MB (15 MB of user memory)
SDRAM	Capacity: 256 MB
MRAM	Capacity: 4 MB
Calendar	Seconds, minutes, hour, day, week, month, year, day of week, and timing
Ethernet	One port, 10Base-T or 100Base-TX
MECHATROLINK	<ul style="list-style-type: none"> <li>• MECHATROLINK-III, 1 circuit with 1 port</li> <li>• Master</li> </ul>
USB	<ul style="list-style-type: none"> <li>• USB 2.0, Type A host, 1 port</li> <li>• Compatible devices: USB storage</li> </ul>
Indicators and Displays	<ul style="list-style-type: none"> <li>• Seven-segment display</li> <li>• Status indicators</li> <li>• USB Status Indicator</li> <li>• Ethernet status indicators</li> <li>• DIP switches: Mode switches</li> <li>• STOP/SAVE switch</li> </ul>
Switches	
Connectors	<ul style="list-style-type: none"> <li>• MECHATROLINK-III connector (CN6)</li> <li>• USB connector (CN10)</li> <li>• Ethernet connector (CN12)</li> <li>• Controller Section I/O connector (CN13)</li> </ul>

### Performance Specifications

Item	Specification	Remarks
Number of controlled Axes	SVC4	4 axes 1 circuit
	SVD	2 axes
	SVR4	4 axes 1 circuit
	Maximum Number of controlled Axes	6 axes
Scan Time Settings	H Scan	0.5 ms to 32.0 ms (in 0.25-ms increments)
	L Scan	2.0 ms to 300 ms (in 0.5-ms increments)
	H Scan Default	4 ms
	L Scan Default	200 ms
Peripheral Devices	Calendar	Supported
	Communications Interface	Ethernet
	USB	Supported
Memory Capacity	DRAM	256 MB with ECC
	MRAM	4 MB
	Program Capacity	15 MB
Ladder Programs	Number of Startup Drawings (DWG.A)	64
	Number of Interrupt Drawings (DWG.I)	64
	Number of High-Speed Scan Drawings (DWG.H)	1,000
	Number of Low-Speed Scan Drawings (DWG.L)	2,000
	Number of User Function Drawings	2,000
		Number of steps per drawing: 4,000

	Execution Conditions	You can select controls (start/stop) from a ladder program	–
Engineering Tools	Execution Status Monitor	Supported	–
	MotomanSync-MP	Supported	–
	FTP Server	Supported	–
	FTP Client	Supported	–
	Receive Buffer Mode Selection for Noprotocol Communications	Supported	–

## Motion Control Function Module Specifications

Module	Item	Specification
SVD	Number of Controlled Axes <sup>1</sup>	2
	Reference Update Cycle (High-Speed Scan Cycle Performed by the CPU)	500 µs to 32.0 ms
	Register Ranges	Registers for two axes are assigned from the registers for each circuit. Refer to the following manual for details. Sigma-7-Series Sigma-7C SERVOPACK Motion Control User's Manual (Manual No.: SIEP S800002 03)
SVC4	Number of Controlled Axes <sup>1</sup>	4
	Reference Update Cycle (High-Speed Scan Cycle Performed by the CPU)	500 µs to 32.0 ms
	Register Ranges	Registers for four axes are assigned from the registers for each circuit. Refer to the following manuals for details. Sigma-7-Series Sigma-7C SERVOPACK Motion Control User's Manual (Manual No.: SIEP S800002 03)
	MECHATROLINK-III communications	Communications Interface
		Master
		Communications Cycle (Reference Update Cycle)
		500 µs to 32.0 ms
		Transmission Cycle <sup>2</sup>
		125 µs, 250 µs, 500 µs, or 1 ms
		Communications Cable
		MECHATROLINK-III Communications Cable
		Maximum Number of Connectable Stations
SVR4	Number of Controlled Axes <sup>1</sup>	8
	Reference Update Cycle (High-Speed Scan Cycle Performed by the CPU)	Cascade connections, star connections, or mixed star-cascade connections
	Register Ranges	Not required
		SERVOPACKs, Stepping Motor Drivers, Inverters, I/O Modules, and Machine Controllers that support MECHATROLINK-III communications
SVR4	Number of Controlled Axes <sup>1</sup>	MECHATROLINK-III Servo Standard, MECHATROLINK-III I/O Standard, MECHATROLINK-III Inverter Standard, and MECHATROLINK-III Stepping Motor Standard
	Reference Update Cycle (High-Speed Scan Cycle Performed by the CPU)	
	Register Ranges	Registers for four axes are assigned from the registers for each circuit. Refer to the following manuals for details. Sigma-7-Series Sigma-7C SERVOPACK Motion Control User's Manual (Manual No.: SIEP S800002 03)

\*1. A maximum of six axes can be controlled with the Motion Control Function Module in a Sigma-7C SERVOPACK.

Do not control more than a total of six axes with one Motion Control Function Module.

\*2. The transmission cycle is the cycle in which the SVC4 and the slave devices perform communications on the MECHATROLINK-III transmission path.

## M-EXECUTOR Specifications

### Registerable Programs

Program Type	Number of Registered Programs
Motion Programs	32*
Sequence Programs	Startup
	1
	Interrupt
	Not possible
H scan	32*
	32*

\* The combined total of motion programs and sequence programs must not exceed 32.

## Program Control Methods

You can use the following control methods for the programs that are registered in the M-EXECUTOR:

Item	Motion Programs		Sequence Programs
Execution Method	Sequential execution		Startup: Event execution H scan: Scan execution L scan: Scan execution
	The same number is used for the definition number and system work number.		
System Work	Definition Number	System Work Number	
	No.1	1	
	No.2	2	
	...	...	
	No.32	32	
Program Designation Method	Direct designation or indirect designation		Direct designation
Program Execution Method	Register the program in the definitions and start execution by turning ON the start signal.		Execution is started when the program is registered in the definitions.
Interpolation Override Setting	Supported		Not supported
I/O Link Definitions	Supported		Not supported
Motion Program Status reporting in S Registers	Supported		
	Up to 8 Main: 4 forks, Sub: 2 forks Main: 8 forks Main: 2 forks, Sub: 4 forks Sub: 8 forks		No forks
Number of Parallel Forks			
Error Diagram Execution when an Operation Error occurs	Supported		

## USB Memory Specifications

Item	Specification	Remarks
Supported Media	USB memory device	Refer to the „Recommended USB Memory Device“ section for details.
Applicable FAT	FAT16/32	–
Maximum Number of Nested Directories	10	–
File Information	Last update timestamp supported	Uses the calendar in the Controller Section. Refer to the following manual for details. Sigma-7-Series Sigma-7C SERVOPACK Product Manual (Manual No.: SIEP S800002 04)
Maximum Length for File Name and Directory Names	256 characters	–
Current Directory Function	16	–
Maximum Number of Simultaneously Open Files	16	–
Formatting	Not supported	Use a formatted USB memory device.

## Recommended USB Memory Device

The following USB memory device is recommended. It can be purchased from YASKAWA.

Model	Specification	Manufacturer
SFU24096D1BP1TO-C-QT-111-CAP	4-GB USB memory	Swissbit Japan Inc.

## IO16 Function Module Specifications

The following table gives the specifications of the IO16 Function Module. There are 16 digital inputs and 16 digital outputs in the IO16 Function Module.

Item	Specification
Digital Inputs	Number of Inputs 16
	Input Method Sink/source
	Isolation Method Photocouplers
	Input Voltage 24 VDC ±20%
	Input Current 5 mA (typical)
	ON Voltage/Current 15 V min./2 mA min.
	OFF Voltage/Current 5 V max./1 mA max.
	ON/OFF Time 0.01 ms + Digital filter setting
	Digital Filter Setting 0 to 65,535 µs
	Number of Commons 2 (8 points per common) DI_00 is also used for interrupt signals DI_01 is also used as the pulse latch input
Digital Outputs	Number of Outputs 16
	Output Method Transistor open-collector sink outputs
	Isolation Method Photocouplers
	Output Voltage 24 VDC (20 V to 30 V)
	Output Current 50 mA max.
	Leakage Current When OFF 0.1 mA max.
	ON/OFF Time 0.01 µs (for output current of 85 mA)
	Number of Commons 2 (8 points per common)
	Output Protection Thermistor (automatic recovery after blow out)
	Others DO_00 is also used as the Match Output

## Counter Specifications

The following table gives the specifications of counter. The counter uses a pulse input on one channel.

Item	Specification
Pulse Input	Number of Inputs 1 (phase A, B, or Z input)
	Input Circuits Phases A and B: 5-V differential input, not isolated, maximum frequency: 4 MHz Phase Z: 5-V, 12-V, or 24-V photocoupler input, maximum frequency: 500 kHz
	Input Modes Phases A and B, sign, and incrementing/decrementing Pulses are latched for phase Z or DI_01. Response Times for Phase-Z Input
	ON: 1 µs max. OFF: 1 µs max.
	Latch Input Response Times for DI_01 Input ON: 60 µs max. OFF: 0.5 ms max.
	Other Functions Match detection, counter preset and clear, electronic gear conversion, phase-C (phase-Z), and digital filter

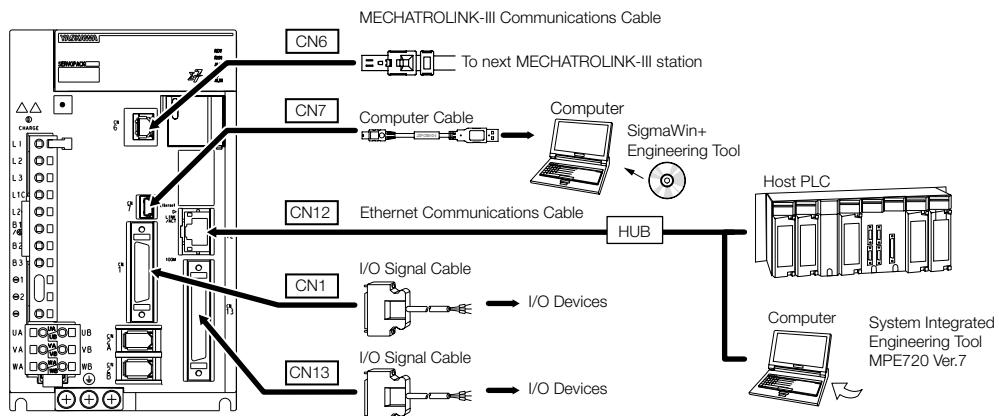

## System Register Specifications

This section shows the overall structure of the system registers. Refer to the following manuals for details.  
Sigma-7-Series Sigma-7C SERVOPACK Product Manual (Manual No.: SIEP S800002 04)  
Sigma-7-Series Sigma-7C SERVOPACK Troubleshooting Manual (Manual No.: SIEP S800002 07)

Register Addresses	Contents
SW00000 to SW00029	System Service Registers
SW00030 to SW00049	System Status
SW00050 to SW00079	System Error Status
SW00050 to SW00079	User Operation Error Status
SW00090 to SW00103	System Service Execution Status
SW00104 to SW00109	Reserved
SW00110 to SW00189	Detailed User Operation Error Status
SW00190 to SW00199	Reserved
SW00200 to SW00503	Security Status
SW00504 and SW00505	Reserved
SW00506 and SW00507	Security Status
SW00508 to SW00649	Reserved

SW22064 to SW23999	Reserved
SW24000 to SW24321	Data Logging Execution Status
SW24322 to SW24999	Reserved
SW24400 to SW24719	FTP Client Status and Controls
SW25000 to SW25671	Automatic Reception Status for Ethernet Communications
SW25672 to SW27599	Reserved
SW27600 to SW29775	Maintenance Monitor
SW29776 to SW65534	Reserved

## Selecting Cables SGD7C with built-in Controller

### System Configurations

### Selection Table

1. Use the cable specified by YASKAWA for the Computer Cable. Operation may not be dependable with any other cable.
2. Use the cable specified by YASKAWA for the MECHATROLINK Communications Cables. Operation may not be dependable due to low noise resistance with any other cable.

Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables  
Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

Code	Description	Length	Order Number	Appearance
CN7	Computer Cable	2.5m	JZSP-CVS06-02-E	
CN13	Soldered Connector Kit		DP9420007-E	
		0.5 m	JUSP-TA36P-E	
	Connector-Terminal Block Converter Unit (with cable)	1 m	JUSP-TA36P-1-E	
		2 m	JUSP-TA36P-2-E	
	I/O Signal Cables	1 m	JZSP-CSI03-1-E	
		2 m	JZSP-CSI03-2-E

CN12	Ethernet communications cables			Use a commercially available cable that meets the following conditions: Ethernet specification: 100Base-TX Category 5 or higher Twisted-pair cable with RJ-45 connectors	

## SERVOPACK Main Circuit Wires

These specifications are based on IEC/EN 61800-5-1, UL 61800-5-1, and CSA C22.2 No.274.

1. To comply with UL standards, use UL-compliant wires.
2. Use copper wires with a rated temperature of 75° or higher.
3. Use copper wires with a rated withstand voltage of 300 V or higher.

Note:

To use 600-V heat-resistant polyvinyl chloride-insulated wire (HIV), use the following table as reference for the applicable wires.

- The specified wire sizes are for three bundled leads when the rated current is applied with a surrounding air temperature of 40°C.
- Select the wires according to the surrounding air temperature.

### Single-phase / Three-phase, 200-VAC Wires for Sigma-7C SERVOPACKs

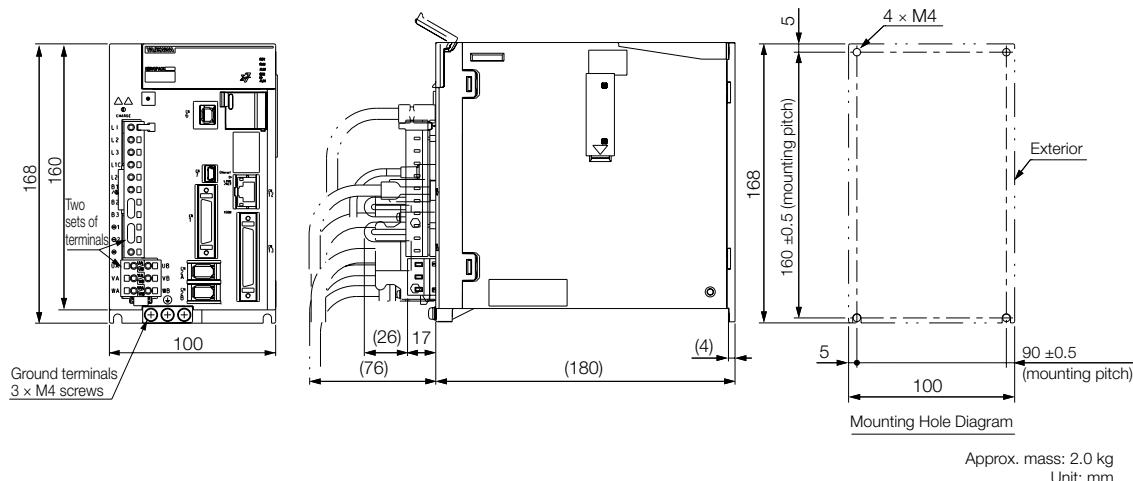

SGD7C-	Terminals	Wire Size	Screw Size	Tightening Torque [Nm]
1R6A <sup>*2</sup>	Main Circuit Power Supply Cable	L1, L2, L3	AWG16 (1.25 mm <sup>2</sup> )	–
	Servomotor Main Circuit Cable <sup>*1</sup>	UA, VA, WA, UB, VB, WB		
	Control Power Supply Cable	L1C, L2C		
	External Regenerative Resistor Cable	B1/ B2		
	Ground cable		AWG14 (2.0 mm <sup>2</sup> ) min.	M4 1.2 to 1.4
2R8A <sup>*2</sup>	Main Circuit Power Supply Cable	L1, L2, L3	AWG14 (2.0 mm <sup>2</sup> )	–
	Servomotor Main Circuit Cable <sup>*1</sup>	UA, VA, WA, UB, VB, WB		
	Control Power Supply Cable	L1C, L2C		
	External Regenerative Resistor Cable	B1/ B2		
	Ground cable		AWG14 (2.0 mm <sup>2</sup> ) min.	M4 1.2 to 1.4
5R5A <sup>*2</sup> , 7R6A	Main Circuit Power Supply Cable	L1, L2, L3	AWG16 (1.25 mm <sup>2</sup> )	–
	Servomotor Main Circuit Cable <sup>*1</sup>	UA, VA, WA, UB, VB, WB		
	Control Power Supply Cable	L1C, L2C		
	External Regenerative Resistor Cable	B1/ B2		
	Ground cable		AWG14 (2.0 mm <sup>2</sup> ) min.	M4 1.2 to 1.4

\*1 If you do not use the recommended Servomotor Main Circuit Cable, use this table to select wires.

\*2 You can use these models with either a single-phase or three-phase power supply input.

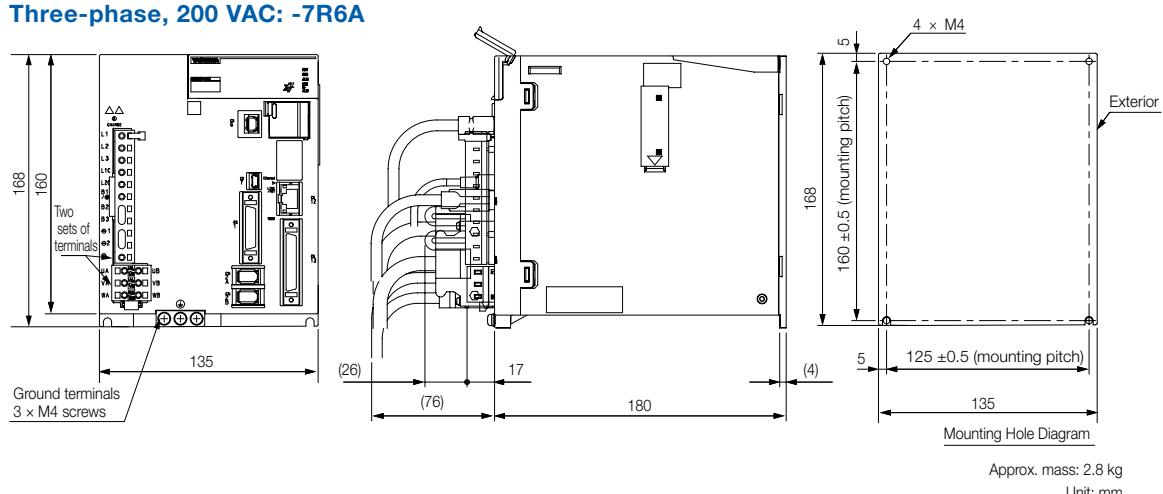

## Sigma-7C SERVOPACK External Dimensions

### Three-phase & Single-phase, 200 VAC: SGD7C-1R6A and -2R8A

### Three-phase & Single-phase, 200 VAC: SGD7C-5R5A

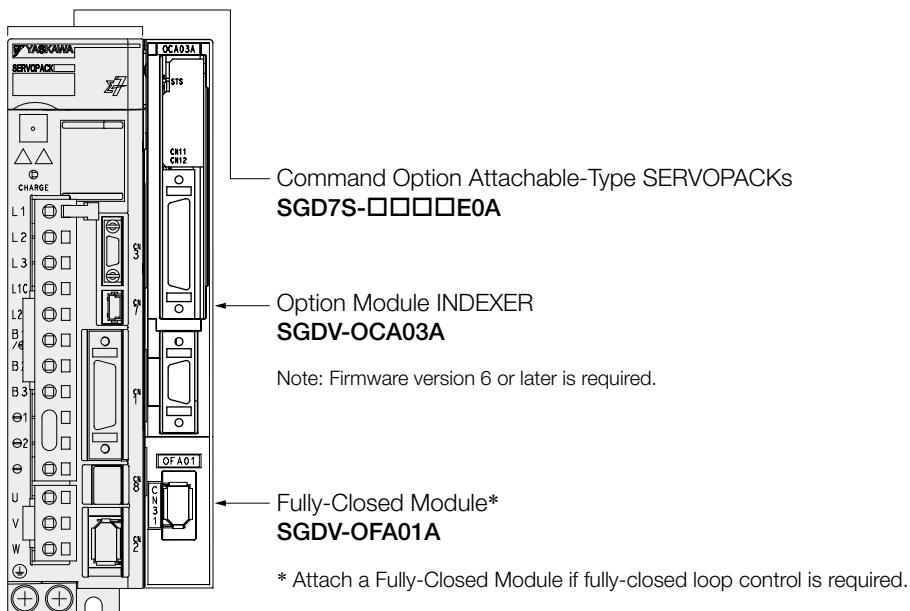

### Three-phase, 200 VAC: -7R6A

# Sigma-7S Command Option Attachable Type

## Configuration

A Sigma-7S Single-axis INDEXER Module-Mounted SERVOPACK is a Command Option Attachable-Type SERVOPACK with an INDEXER Module mounted on the side of the SERVOPACK. Positioning with single-axis control can be performed by using program table operation and other functions.

Three-phase, 200 V	
R70* <sup>1</sup>	0.05 kW
R90* <sup>1</sup>	0.1 kW
1R6* <sup>1</sup>	0.2 kW
2R8* <sup>1</sup>	0.4 kW
3R8	0.5 kW
5R5* <sup>1</sup>	0.75 kW
7R6	1.0 kW
120* <sup>2</sup>	1.5 kW
180	2.0 kW
200* <sup>3</sup>	3.0 kW
330	5.0 kW
470	6.0 kW
550	7.5 kW
590	11 kW
780	15 kW

Note:

Depending on configuration choices made, the model code might end after the 7th or 10th digit, or involve all 13 digits.

Readily available up to 1.5 kW. Others available on request.

Additional accessories and software for SERVOPACKs is described in the Periphery section.

Note:

\*1. You can use these models with either a single-phase or three-phase power supply input.

\*2. A model with a single-phase, 200-VAC power supply input is available as a hardware option (model: SGD7S-120A00A008).

\*3. The rated output is 2.4 kW if you combine the SGM7G-30A with the SGD7S-200A.

\*4. The same SERVOPACKs are used for both Rotary Servomotors and Linear Servomotors.

\*5. A command option module must be attached to the Command Option Attachable-type SERVOPACK for use.

\*6. Refer to the following manual for details.

Sigma-7-Series AC Servo Drive Sigma-7S/Sigma-7W SERVOPACK with Hardware Option Specifications Dynamic Brake Product Manual (Manual No.: SIEP S800001 73)

\*7. Refer to the following manual for details.

## SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C. An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a YASKAWA-specified combination of SERVOPACK and Servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic (or force-motor speed characteristics) of the Servomotor.

# SGD7S Command Option Attachable Type

## Specifications

The specification when the INDEXER Module is combined with a Command Option Attachable-Type SERVOPACK are given in the following table.

Item		Specification	
Control Method		IGBT-based PWM control, sine wave current drive	
Feedback	With Rotary Servomotor	Serial encoder: 17 bits (absolute encoder) 20 bits or 24 bits (incremental encoder/absolute encoder) 22 bits (absolute encoder)	
	With Linear Servomotor	• Absolute linear encoder (The signal resolution depends on the absolute linear encoder.) • Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.)	
Surrounding Air Temperature		0°C to 55°C	
Storage Temperature		-20°C to 85°C	
Surrounding Air Humidity		90% relative humidity max. (with no freezing or condensation)	
Storage Humidity		90% relative humidity max. (with no freezing or condensation)	
Vibration Resistance		4.9 m/s <sup>2</sup>	
Shock Resistance		19.6 m/s <sup>2</sup>	
Environmental Conditions	Degree of Protection	Class	SERVOPACK Model: SGD7S-
		IP10	R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A, 120A
		IP20	120AE0A008, 180A, 200A, 330A, 470A, 550A, 590A, 780A
	Pollution Degree	2	
		• Must be no corrosive or flammable gases. • Must be no exposure to water, oil, or chemicals. • Must be no dust, salts, or iron dust.	
	Altitude	1,000 m max.	
Others		Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity UL 61800-5-1 (E147823), CSA C22.2 No.274, EN ISO13849-1: 2015, EN 55011 group 1 class A, EN 61000-6-2, EN 61000-6-4, EN 61800-3 (Category C2, Second environment), EN 50178, EN 61800-5-1, IEC 60204-1, IEC 61508 series, IEC 62061, IEC 61800-5-2, and IEC 61326-3-1	
Applicable Standards		SERVOPACK Model: SGD7S-	
Mounting		Mounting	
		Base-mounted	All Models
		Rack-mounted	R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A, 120A, 180A, 200A, 330A
		Duct-ventilated	470A, 550A, 590A, 780A
Performance	Speed Control Range	1:5,000 (At the rated torque, the lower limit of the speed control range must not cause the Servomotor to stop.)	
	Coefficient of Speed Fluctuation <sup>*1</sup>	±0.01% of rated speed max. (for a load fluctuation of 0% to 100%) 0% of rated speed max. (for a voltage fluctuation of ±10%) ±0.1% of rated speed max. (for a temperature fluctuation of 25°C ±25°C)	
	Torque Control Precision (Repeatability)	±1%	
	Soft Start Time Setting	0 s to 10 s (Can be set separately for acceleration and deceleration.)	
I/O Signals	Encoder Divided Pulse Putput	Phase A, phase B, phase C: Line-driver output Number of divided output pulses: Any setting is allowed	
	Overheat Protection Input	Number of input points: 1 Input voltage range: 0 V to ±5 V

Item		Specification		
Communications	RS-422A Communications (CN3)	Interfaces 1:N Communications Axis Address Setting		
		Up to N = 15 stations possible for RS-422A port		
		Set with parameters.		
Displays/ Indicators	USB Communications (CN7)	Interfaces Communication Standard		
		Interface Personal computer (with SigmaWin+) Conforms to USB2.0 standard (12 Mbps).		
Operating Methods	SERVOPACK			
	INDEXER Module			
	Program Table Method			
	Max. Number of Steps Max. Number of Tables Max. Number of Stations	256 256 256		
		Serial command by 1-channel ASCII code Communications specifications: RS-422/485 (50 m max.) Connection topology: Multi-drop connection (16 axes max.) Baud rate: 9,600, 19,200, 38,400 bps		
		Other Functions		
	Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA Settling time (±1%): 1.2 ms (Typ)			
	Dynamic Brake (DB)			
Regenerative Processing				
Overtravel (OT) Prevention				
Protective Functions				
Utility Functions				
Safety Functions	Input	/HWBB1 and /HWBB2: Base block signals for Power Modules		
	Output	EDM1: Monitors the status of built-in safety circuit (fixed output).		
	Applicable Standards <sup>*2</sup>	ISO13849-1 PLe (Category 3), IEC61508 SIL3		
Applicable Option Modules		Fully-Closed Module You cannot use a Safety Module if you are using an INDEXER Module.		

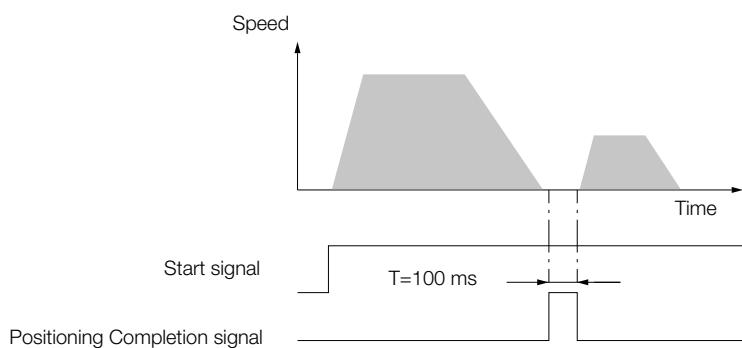

\*1. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

\*2. Always perform risk assessment for the system and confirm that the safety requirements are met.

## Reference Methods

## Jog Speed Table

	JSPD	JOG3	JOG2	JOG1	JOG0	Jog Speed
16 combinations	0	0	0	0	0	1000
	1	0	0	0	1	2000
	2	0	0	1	0	4000
	:	:	:	:	:	:
	:	:	:	:	:	:
	:	:	:	:	:	:
	15	1	1	1	1	5500

Note: 1: Signal is ON (active), 0: Signal is OFF (inactive).

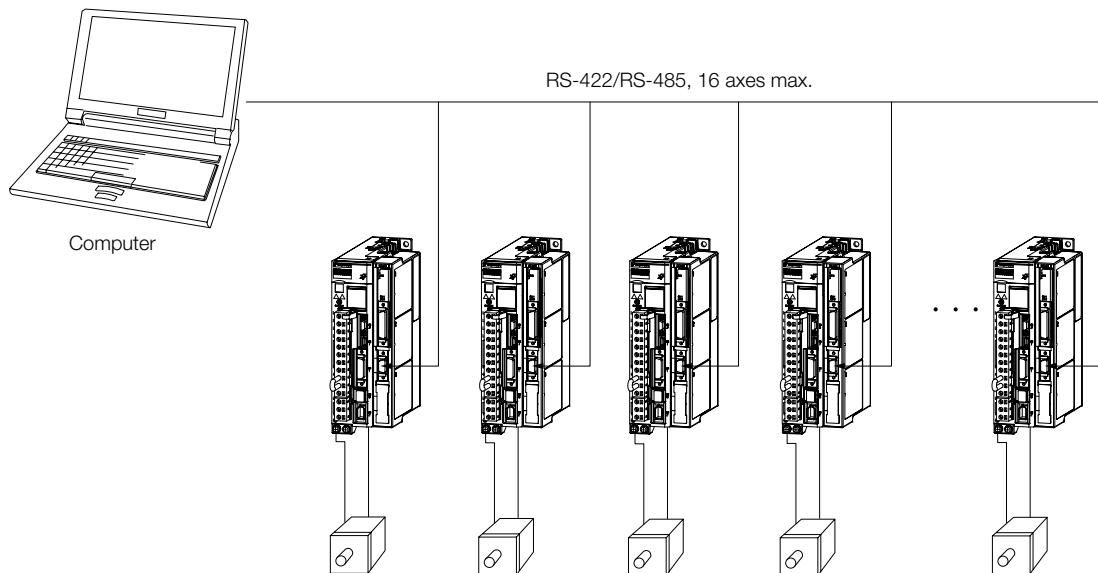

\*1. Forward operation at the jog speed is performed while the /JOGP signal is ON.

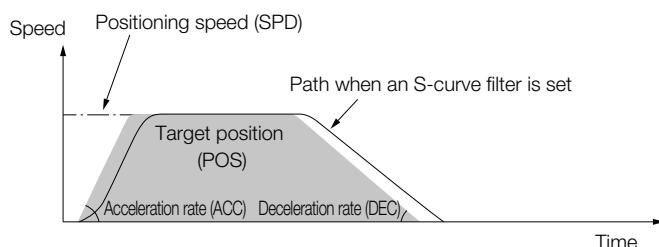

\*2. Reverse operation at the jog speed is performed while the /JOGN signal is ON.

# SGD7S Command Option Attachable Type

With serial commands, ASCII command strings are sent to the INDEXER Module through RS-422 or RS-485 communications and these commands are interpreted and executed immediately. You can use general-purpose serial communications (RS422/RS485) to perform independent control of up to 16 axes from one host controller (e.g., PC or HMI).

```
1SVON          # Servo turned ON.  
1POSI=400000   # Set relative position to 400,000.  
1SPD=2000      # Set speed to 2,000.  
1ACC=200       # Set acceleration rate to 200.  
1DEC=100       # Set deceleration rate to 100.  
1ST            # Start operation.  
:

## Selecting Cables SGD7S Command Option Attachable Type with INDEXER Module

### System Configurations

SGD7S Single Axis Command Option Attachable Type SERVOPACK

INDEXER Module

### Selection Table

1. Use the cable specified by YASKAWA for the Computer Cable. Operation may not be dependable with any other cable.
2. Use the cable specified by YASKAWA for the MECHATROLINK Communications Cables. Operation may not be dependable due to low noise resistance with any other cable.

Refer to the following manual for the following information.

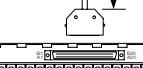

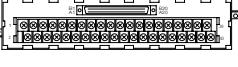

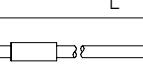

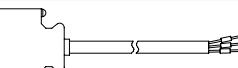

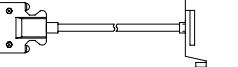

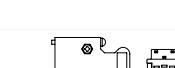

- Cable dimensional drawings and cable connection specifications
  - Order numbers and specifications of individual connectors for cables
- Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

Code	Description	Length	Order Number	Appearance
CN5	Analog Monitor Cable	1 m	JZSP-CA01-E	
CN3	Digital Operator	0.3m	JZSP-OP05A-1-E	
CN7	Computer Cable	2.5m	JZSP-CVS06-02-E

				Contact YASKAWA Controls Co., Ltd. for the cable.

\*1. This Converter Cable is required to use the Sigma-III-series Digital Operator (JUSP-OP05A) for Sigma-7-series SERVOPACKs.

\*2. When using safety functions, connect this Cable to the safety function devices.

When not using safety functions, connect the enclosed Safety Jumper Connector (JZSP-CVH05-E) to the SERVOPACK.

\*3. Use the Connector Kit when you make cables yourself.

## SERVOPACK Main Circuit Wires

These specifications are based on IEC/EN 61800-5-1, UL 61800-5-1, and CSA C22.2 No.274.

1. To comply with UL standards, use UL-compliant wires.
2. Use copper wires with a rated temperature of 75° or higher.
3. Use copper wires with a rated withstand voltage of 300 V or higher.

## Note:

To use 600-V heat-resistant polyvinyl chloride-insulated wire (HIV), use the following table as reference for the applicable wires.

- The specified wire sizes are for three bundled leads when the rated current is applied with a surrounding air temperature of 40°C.
- Select the wires according to the surrounding air temperature.

## Three-phase, 200-VAC Wires for Sigma-7S SERVOPACKs

SGD7S-	Terminals	Wire Size	Screw Size	Tightening Torque [Nm]

\*1. Do not wire the following terminals: L1, L2, L3, B2, B3,  $\Theta$ 1,  $\Theta$  and terminals.

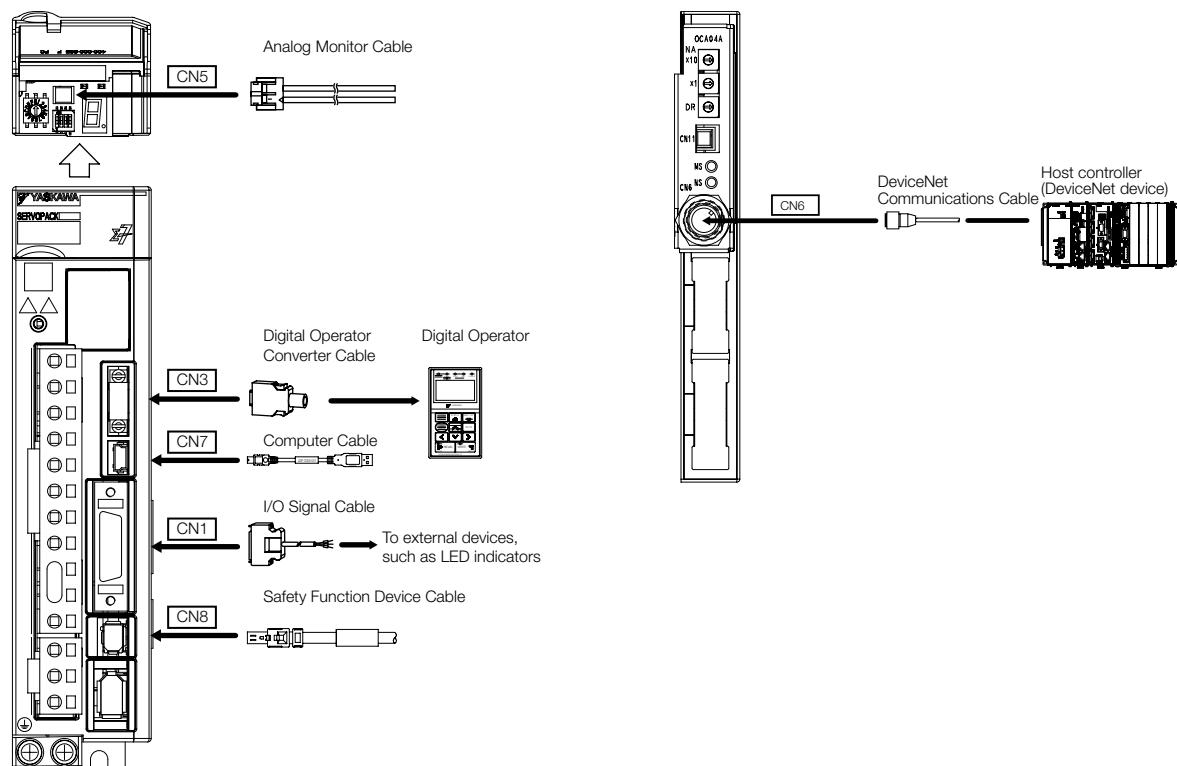

\*2. If you do not use the recommended Servomotor Main Circuit Cable, use this table to select wires.

## Selecting Cables SGD7S Command Option Attachable Type with DeviceNet Module

### System Configurations

SGD7S Single Axis Command Option  
Attachable Type SERVOPACK

DeviceNet Module

## Selection Table

1. Use the cable specified by YASKAWA for the Computer Cable. Operation may not be dependable with any other cable.
2. Use the cable specified by YASKAWA for the MECHATROLINK Communications Cables. Operation may not be dependable due to low noise resistance with any other cable.

Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables

			The communications cable must be an ODVA-Compliant DeviceNet communications cable. We recommend the following Cable. OMRON DCA1-5CN02F1 Cable with Connectors or the equivalent.	

\*1. This Converter Cable is required to use the Sigma-III-series Digital Operator (JUSP-OP05A) for Sigma-7-series SERVOPACKs.

\*2. When using safety functions, connect this Cable to the safety function devices.

When not using safety functions, connect the enclosed Safety Jumper Connector (JZSP-CVH05-E) to the SERVOPACK.

\*3. Use the Connector Kit when you make cables yourself.

## SERVOPACK Main Circuit Wires

These specifications are based on IEC/EN 61800-5-1, UL 61800-5-1, and CSA C22.2 No.274.

1. To comply with UL standards, use UL-compliant wires.
2. Use copper wires with a rated temperature of 75° or higher.
3. Use copper wires with a rated withstand voltage of 300 V or higher.

## Note:

To use 600-V heat-resistant polyvinyl chloride-insulated wire (HIV), use the following table as reference for the applicable wires.

- The specified wire sizes are for three bundled leads when the rated current is applied with a surrounding air temperature of 40°C.
- Select the wires according to the surrounding air temperature.

Note: Readily available up to 1.5 kW. Others available on request.

\*1. This is the net value at the rated load.

\*2. This value is for the optional JUSP-RA04-E Regenerative Resistor Unit.

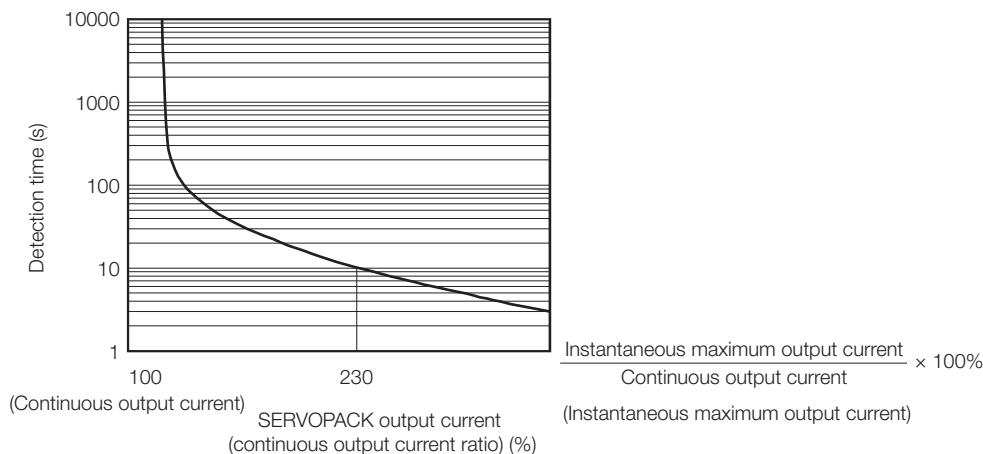

\*3. This value is for the optional JUSP-RA05-E Regenerative Resistor Unit.

## SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C. An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed. The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

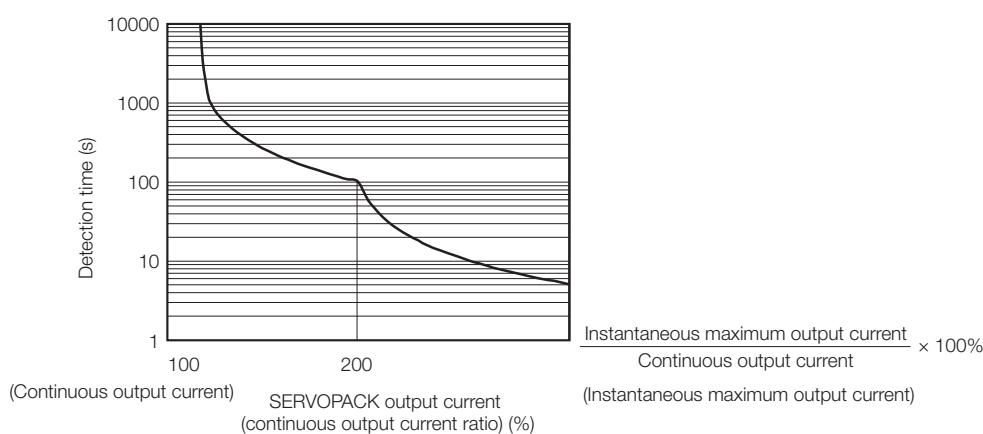

### SGD7S-R70A, -R90A, -1R6A, -2R8A, -R70F, -R90F, -2R1F, and -2R8F

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. For a YASKAWA-specified combination of SERVOPACK and Servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic of the Servomotor.

### SGD7S-3R8A, -5R5A, -7R6A, -120A, -180A, -200A, -330A, -470A, -550A, -590A and -780A

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. For a YASKAWA-specified combination of SERVOPACK and Servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic of the Servomotor.

## Specifications

Item		Specification			
Control Method		IGBT-based PWM control, sine wave current drive Serial encoder: 20 bits or 24 bits (incremental encoder/absolute encoder) 22 bits (absolute encoder)			
Feedback	With Rotary Servomotor	• Absolute linear encoder (The signal resolution depends on the absolute linear encoder.) • Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.)			
	With Linear Servomotor				
Ambient Air Temperature		-5°C to 55°C With derating, usage is possible between 55°C and 60°C.			
Storage Temperature		-20°C to 85°C			
Ambient Air Humidity		95% relative humidity max. (with no freezing or condensation)			
Storage Humidity		95% relative humidity max. (with no freezing or condensation)			
Vibration Resistance		4.9 m/s <sup>2</sup>			
Shock Resistance		19.6 m/s <sup>2</sup>			
Environmental Conditions	Degree of Protection	Degree	SERVOPACK Model: SGD7S-R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A, 120A, R70F, R90F, 2R1F, 2R8F		
		IP 20	180A, 200A, 330A, 470A, 550A, 590A, 780A		
		IP 10			
	Pollution Degree	• Must be no corrosive or flammable gases. • Must be no exposure to water, oil, or chemicals. • Must be no dust, salts, or iron dust.			
	Altitude	1,000 m or less With derating, usage is possible between 1,000 m and 2,000 m.			
Others		Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity			
Applicable Standards					
Compliance with UL Standards, EU Directives and Other Safety Standards					
Mounting	Mounting		SERVOPACK Model: SGD7S		
	Base-mounted		All Models		
	Rack-mounted		R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A, 120A, 180A, 200A, 330A, R70F, R90F, 2R1F, 2R8F		
	Duct-ventilated		470A, 550A, 590A, 780A		
Performance	Speed Control Range		1:5000 (At the rated torque, the lower limit of the speed control range must not cause the Servomotor to stop.)		
	Coefficient of Speed Fluctuation		±0.01% of rated speed max. (for a load fluctuation of 0% to 100%) 0% of rated speed max. (for a voltage fluctuation of ±10%) ±0.1% of rated speed max. (for a temperature fluctuation of 25°C ± 25°C)		
	Torque Control Precision (Repeatability)		±1%		
	Soft Start Time Setting		0 s to 10 s (Can be set separately for acceleration and deceleration.)		
I/O Signals	Encoder Divided Pulse Output		Phase A, phase B, phase C: Line-driver output Number of divided output pulses: Any setting is allowed.		
	Linear Servomotor Overheat Protection Signal Input		Number of input points: 1 Input voltage range: 0 V to +5 V		
	Digital Input Signals	Input Signals that can be allocated	Allowable voltage range: 24 VDC ±20% Number of input points: 7 Input method: Sink inputs or source inputs Input Signals • P-OT (Forward Drive Prohibit) and N-OT (Reverse Drive Prohibit) signals • /EXT1 External latch signal input (General purpose input) • /EXT2 External latch signal input (General purpose input) • /EXT3 External latch signal input (General purpose input) • /P-CL (Forward External Torque Limit) and /N-CL (Reverse External Torque Limit) signals • FSTP (Forced Stop Input) signal A signal can be allocated and the positive and negative logic can be changed.

# SGD7Siec with integrated iec-Controller

Continued from previous page.

Item		Specification	
I/O Signals	Digital Output Signals	Fixed Output	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 1 Output signal: ALM (Servo Alarm) signal Allowable voltage range: 5 VDC to 30 VDC Number of output points: 3 (A photocoupler output (isolated) is used.) Output Signals <ul style="list-style-type: none"> <li>• /COIN (Positioning Completion) signal</li> <li>• /V-CMP (Speed Coincidence Detection) signal</li> <li>• /TGON (Rotation Detection) signal</li> <li>• /S-RDY (Servo Ready) signal</li> <li>• /CLT (Torque Limit Detection) signal</li> <li>• /VLT (Speed Limit Detection) signal</li> <li>• /BK (Brake) signal</li> <li>• /WARN (Warning) signal</li> <li>• /NEAR (Near) signal</li> </ul> A signal can be allocated and the positive and negative logic can be changed.
		Output Signals that can be allocated	
Communications	RS-422A Communications (CN502)	Interfaces	A JUSP-JC001 Communications Unit is required to connect to a Digital Operator (JUSP-OP05A-1-E).
		1:N Communications	Up to N = 15 stations possible for RS-422A port
		Axis Address Setting	Set with parameters.
	USB Communications (CN7)	Interface	Personal computer (with SigmaWin+)
		Communications Standard	Conforms to USB2.0 standard (12 Mbps).
Displays/Indicators			CHARGE, PWR, CN, RUN, ERR, and L/A (A and B) indicators, and one-digit seven-segment display
Analog Monitor (CN5)			Number of points: 2 Output voltage range: $\pm 10$ VDC (effective linearity range: $\pm 8$ V) Resolution: 16 bits Accuracy: $\pm 20$ mV (Typ) Maximum output current: $\pm 10$ mA Settling time ( $\pm 1\%$ ): 1.2 ms (Typ)
Dynamic Brake (DB)			Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.
Regenerative Processing			Built-in (An external resistor must be connected to the SGD7S-470A to -780A.) Refer to the following manual for details. S-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)
Overtravel (OT) Prevention			Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit) or N-OT (Reverse Drive Prohibit) signal
Protective Functions			Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.
Utility Functions			Gain adjustment, alarm history, jogging, origin search, etc.
Safety Functions	Inputs		/HWBB1 and /HWBB2: Base block signals for Power Modules
	Output		EDM1: Monitors the status of built-in safety circuit (fixed output).
	Applicable Standards		ISO13849-1 PLe (Category 3), IEC61508 SIL3
Applicable Option Modules			Fully-closed Modules and Safety Modules Note: You cannot use a Fully-closed Module and a Safety Module together.

# Selecting Cables SGD7Siec with integrated iec-Controller

## System Configurations

## Selection Table

1. Use the cable specified by YASKAWA for the Computer Cable. Operation may not be dependable with any other cable.
2. Use the cable specified by YASKAWA for the MECHATROLINK Communications Cables. Operation may not be dependable due to low noise resistance with any other cable.

Refer to the following manual for the following information:

- Cable dimensional drawings and cable connection specifications
  - Order numbers and specifications of individual connectors for cables
- Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

Code	Description	Length	Order Number	Appearance
CN5	Analog Monitor Cable	1 m	JZSP-CA01-E

	Connector Kit <sup>5</sup>	Contact Tyco Electronics Japan G.K. Product name: Industrial Mini I/O D-shape Type 1 Plug Connector Kit Model number: 2013595-1		

\*1. This Converter Cable is required to use the Sigma-III-series Digital Operator (JUSP-OP05A) for S-7-series SERVOPACKS.

\*2. If you use a MECHATROLINK-III Communications Reference SERVOPACK, this Converter Cable is required to prevent the cable from disconnecting from the Digital Operator.

\*3. This cable is available in two variants. The order number for these cables differs at the marked □, an „R“ at this place is used for Cables with RJ45 Connectors on both ends, while an „M“ is used for Cables with RJ45 Connector on One End and IMI Connector on the other End.

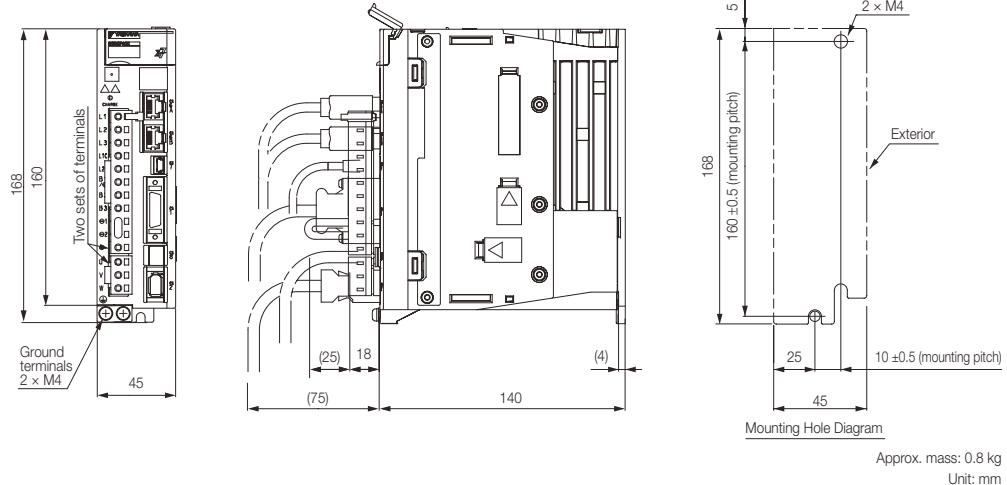

\*4. When using safety functions, connect this Cable to the safety function devices.

When not using safety functions, connect the enclosed Safety Jumper Connector (JZSP-CVH05-E) to the SERVOPACK.

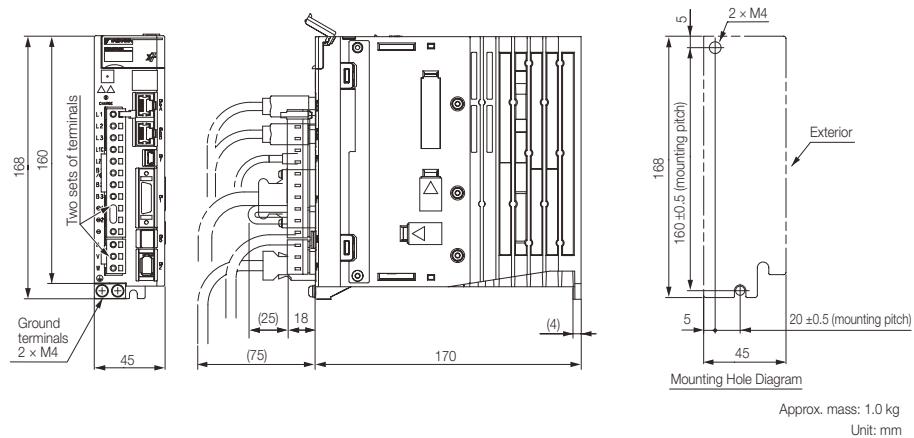

\*5. Use the Connector Kit when you make cables yourself.

# Feedback Option Modules

## Fully-Closed Module

With fully-closed control, an externally installed encoder is used to detect the position of the controlled machine and the machine's position information is fed back to the SERVOPACK. High-precision positioning is possible because the actual machine position is fed back directly. To perform fully-closed loop control, a Fully-Closed Module and SERVOPACK are required.

## Model Designations

When ordering a SERVOPACK and a Safety Module separately, use the following Safety Module model number.

SGDV - OF A01 A

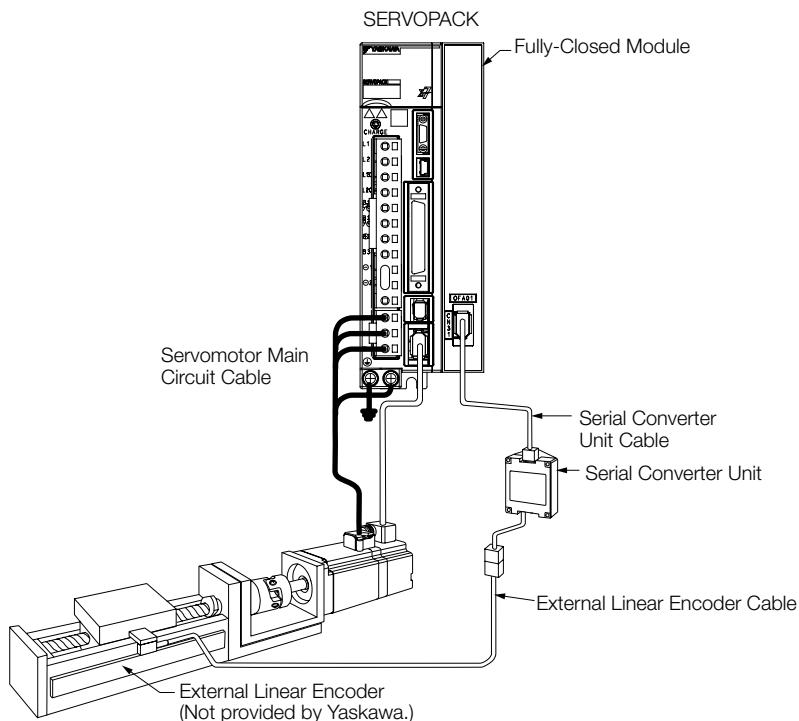

Option Module Safety      1st & 2nd      3rd ... 5th      6th      digit

1st & 2nd digit - Module Type	
Code	Module
OF	Option Module Feedback

3rd ... 5th digit - Interface Specifications	
Code	Interface
A01	for YASKAWA Serial Protocol
B01	Serial and Sin/Cos Encoders
B03	Pulse A quad B Encoders
B04	Resolver

6th digit - Design Revision Order	
Code	Specification
A	Initial Design

## System Configuration Example

\* The connected devices and cables depend on the type of external Linear Encoder that is used.

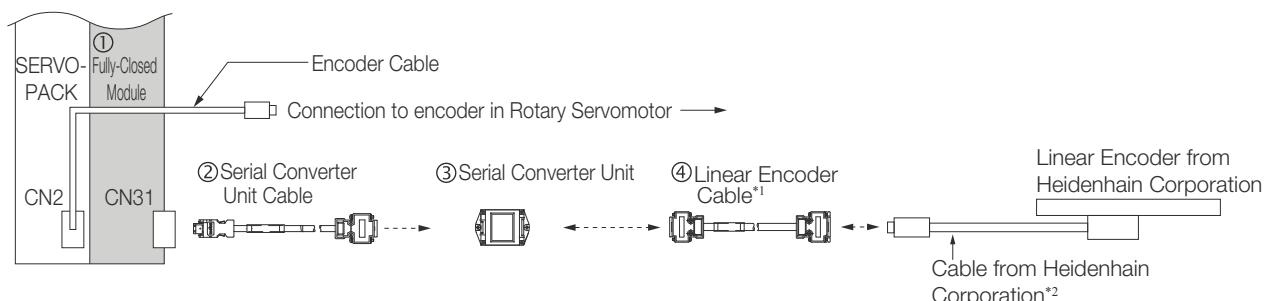

Note:  
Refer to the following section for the information on peripheral devices or chapter Peripheral Devices.

# Feedback Option Module

## Connections to Linear Encoder from Heidenhain Corporation

### Connections for a 1 Vp-p Analog Voltage Output Signal

You must make the connections through a YASKAWA Serial Converter Unit. The output signal will be multiplied by 8 bits (256 divisions) in the Serial Converter Unit.

\*1. When using a JZDP-J00□-□□□Serial Converter Unit, do not use a YASKAWA Linear Encoder Cable that is longer than 3 m.

\*2. Contact Heidenhain Corporation for details on cables (analog 1 Vp-p output, D-sub 15-pin, male) from Heidenhain Corporation.

No.	Item	Model
①	Fully-Closed Module (Purchased alone)	Fully-Closed Module*1 SGDV-OFA01A
②	Serial Converter Unit Cable	JZSP-CLP70-□□*3-E
③	Serial Converter Unit*2	JZDP-H003-000
④	Linear Encoder Cable	JZSP-CLL30-□□*3-E

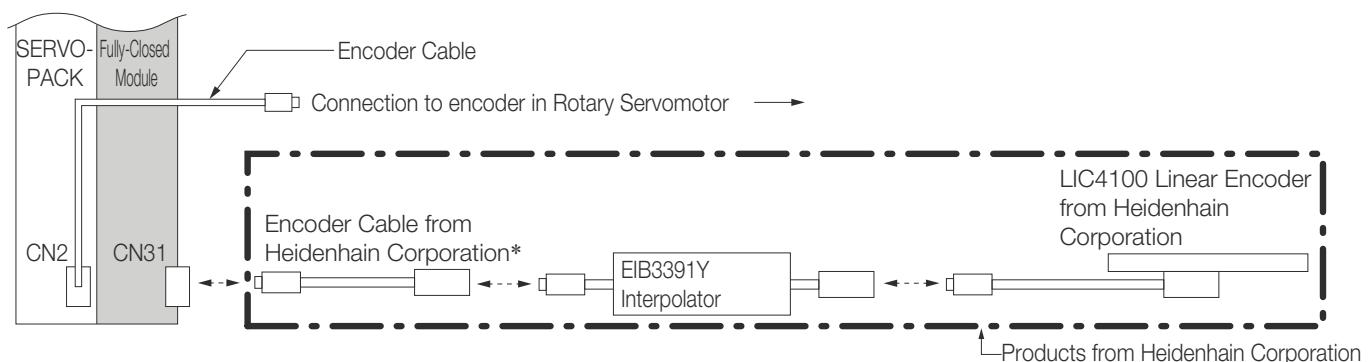

\*1 When ordering a SERVOPACK and a Fully-Closed Module separately, use this Fully-Closed Module model number. Please use the YASKAWA mounting rail JZSP-P7R2-8-E in combination with a Fully-Closed Module.

\*2 Contact your YASKAWA representative for specific information.

\*3 The boxes (□□) in the model number are replaced with cable length when ordering. (1m = 01, 3m = 03, 5m = 05, 10m = 10, 15m = 15)

## Connections when using a YASKAWA Serial Interface for the Output Signals

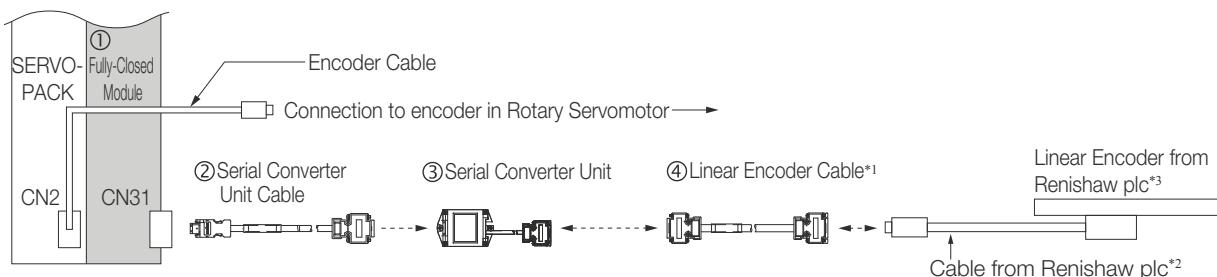

### LIC4100 Linear Encoder with EIB3391Y Interpolator

\* Use an Encoder Cable from Heidenhain Corporation. Contact Heidenhain Corporation for detailed Encoder Cable specifications.

## Connections to Linear Encoder from Renishaw Plc

### Connections for a 1 Vp-p Analog Voltage Output Signal

\*1 When using a JZDP-J00□ - □□□ Serial Converter Unit, do not use a YASKAWA Linear Encoder Cable that is longer than 3 m.

\*2 Contact Renishaw plc for details on cables (analog 1 Vp-p output, D-sub 15-pin, male) from Renishaw plc.

\*3 If you use the origin signals with a Linear Encoder from Renishaw plc, the origin may sometimes be falsely detected. If that occurs, use the BID/DIR signal to output the origin signal only in one direction.

No.	Item	Model
①	Fully-Closed Module (Purchased alone)	Fully-Closed Module* <sup>1</sup> SGDV-OFA01A
②	Serial Converter Unit Cable	JZSP-CLP70-□□ <sup>3</sup> -E
③	Serial Converter Unit* <sup>2</sup>	JZDP-H005-000
④	Linear Encoder Cable	JZSP-CLL00-□□ <sup>3</sup> -E

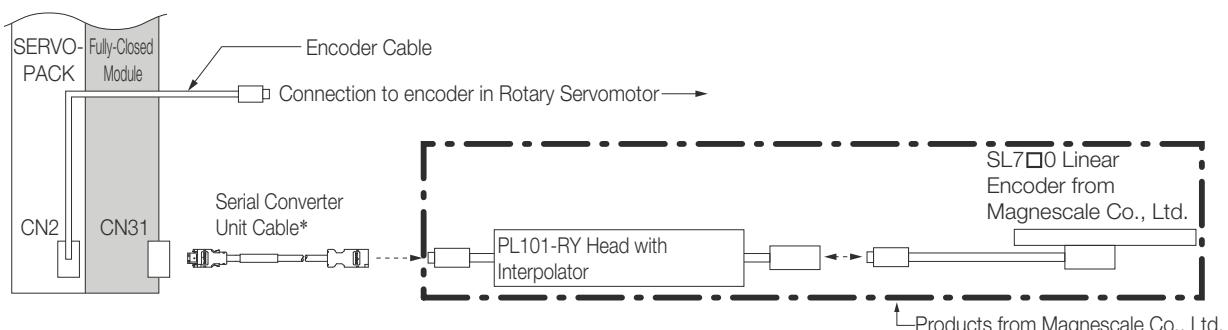

\*1 When ordering a SERVOPACK and a Fully-Closed Module separately, use this Fully-Closed Module model number. Please use the YASKAWA mounting rail JZSP-P7R2-8-E in combination with a Fully-Closed Module.

\*2 Contact your YASKAWA representative for specific information.

\*3 The boxes (□□) in the model number are replaced with cable length when ordering. (1m = 01, 3m = 03, 5m = 05, 10m = 10, 15m = 15)

## Connections to Linear Encoder from Magnescale Co., Ltd.

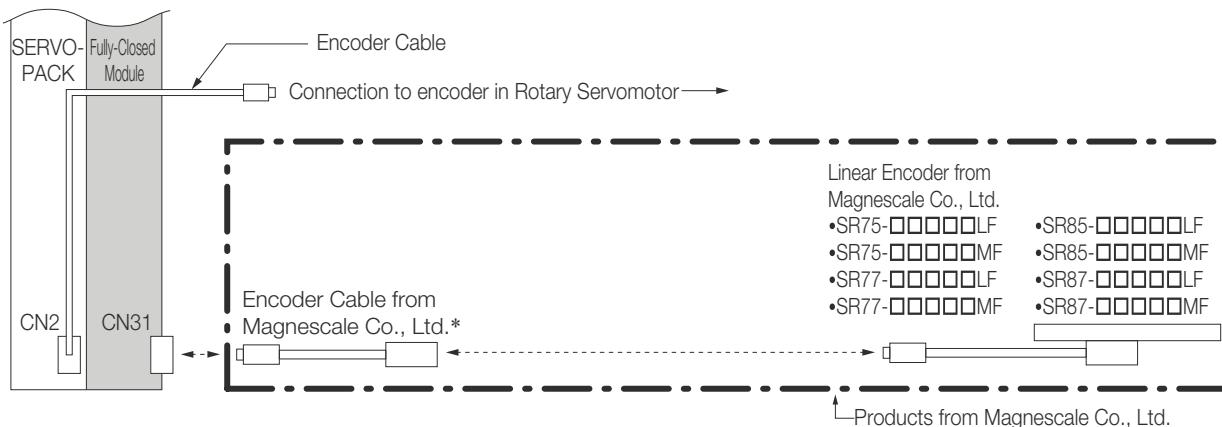

### SL7□0 Linear Encoder and PL101-RY Sensor Head with Interpolator

\* Refer to the following section for information on cables to connect Fully-Closed Modules and Linear Encoders or chapter Serial Converter Unit Cables.

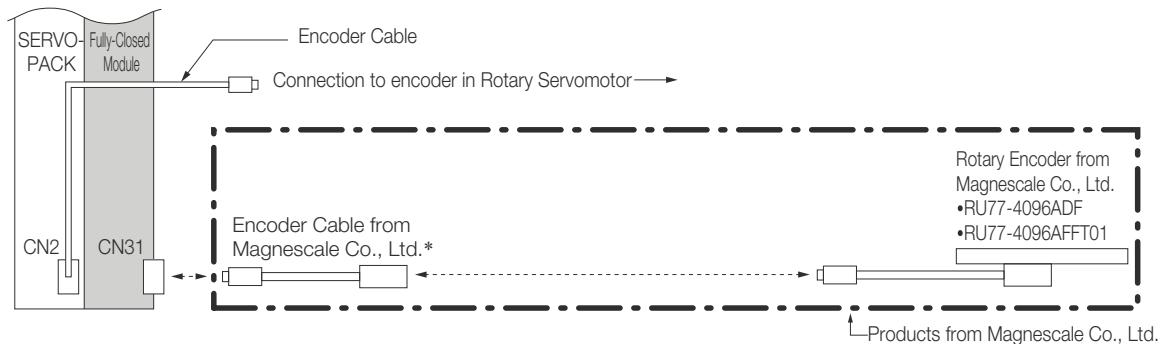

# Feedback Option Module

## SR-75, SR-77, SR-85, and SR-87 Linear Encoders

\* To connect the SERVOPACK and Linear Encoder, use a CH33-xx□□G Cable from Magnescale Co., Ltd. (This Cable has connectors designed for use with YASKAWA products).

## RU77-4096ADF/RU77-4096AFFT01 Absolute Rotary Encoders

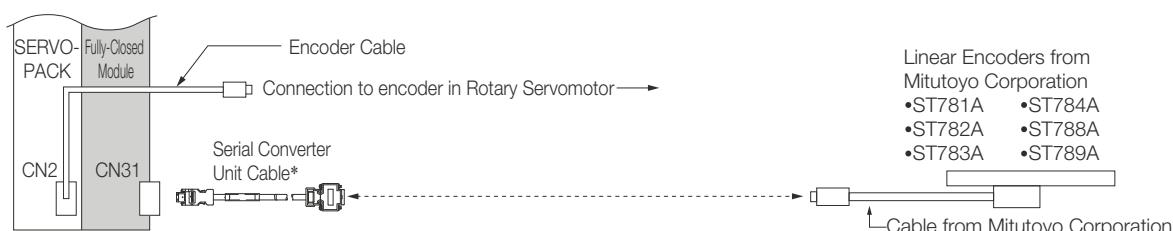

\*To connect the SERVOPACK and Rotary Encoder, use a CE28-Series Extension Cable for RU77 from Magnescale Co., Ltd.

Note: The RU77 is a single-turn absolute rotary encoder.

## Connections to Linear Encoders from Mitutoyo Corporation

### ST78□A Linear Encoders

\* Refer to the following section for information on cables to connect Fully-Closed Modules and Linear Encoders or chapter Serial Converter Unit Cables.

## Connectors

Device Label	Model	YASKAWA Order No.	Number of Pins	Manufacturer
CN31	3E106-0220KV	JZSP-CMP9-1-E-G#	6	3M Japan Ltd.

Note: The above connector or their equivalent are used for the Fully-Closed Module.

## Standard Specifications

Encoder Type		Specifications	
EnDat 2.2	Encoder Supply	Output voltage	Typ. 5 V
	Serial Interface (Synchronous)	Signal transfer	RS485
		Max. Baud rate	16 MHz
EnDat 2.1	Encoder Supply	Output voltage	Typ. 5 V
	Serial Interface (Synchronous)	Signal transfer	RS485
		Max. Baud rate	2 MHz
	Sine-Cosine input	Signal transfer	Differential signals, symmetric
		Differential voltage	0.5 to 1.25 Vss
		Terminating resistor	124 Ohm
Hiperface	Sine-Cosine input	Signal frequency	250 kHz
		Resolution	13-bits (8192)
	Encoder Supply	Output voltage	7 to 12 V
	Serial Interface (Asynchronous)	Signal transfer	RS485
		Max. Baud rate	38.4 MHz
	Sine-Cosine input	Signal transfer	Differential signals, symmetric
		Differential voltage	0.5 to 1.25 Vss
		Terminating resistor	124 Ohm
Sine-Cosine Encoder	Sine-Cosine input	Signal frequency	250 kHz
		Resolution	13-bits (8192)
	Reference input	Signal transfer	Differential signals, symmetric
		Differential voltage	0.2 V or more
		Terminating resistor	124 Ohm

## Option Module Feedback Set-up for Fully-closed Loop Control

The encoder parameters must be written into the module via the SERVOPACK using the SigmaWin+ engineering tool. Ask YASKAWA for preparation encoder parameter file for fully-closed loop.

### Procedure to download the encoder parameter via SigmaWin+ Version 7.2x via Sigma-7 200V to Option Module Feedback.

1. Install a motor, encoder and SERVOPACK.
2. In SigmaWin+ select "Parameters > Parameter edit". Set parameter Pn002.3 = 1 or 3.
3. Start "Setup > Motor parameter scale write" in SigmaWin+.
4. Write configuration file to option module feedback.

Note: Refer to SigmaWin+ Operation manual for information on how to write parameters using SigmaWin+.

# Feedback Option Module

## General Specification SGDV-OFB01A

Item	Specification	
Applicable SERVOPACK	All Sigma-7 Series SERVOPACKs	
Applicable SERVOPACK Firmware Version	Version 0023 or later	
Placement	Attached to the SERVOPACK	
Power Specification	Power Supply Method	Supplied from the control power supply of the SERVOPACK.
	Surrounding Air / Storage Temperature	0°C to +55 °C / -20 °C to +85 °C
	Ambient / Storage Humidity	90% RH or less (with no condensation)
	Vibration / Shock Resistance	4.9 m/s <sup>2</sup> / 19.8 m/s <sup>2</sup>
Operating Conditions	Protection Class / Pollution Degree	Protection class: IP10, Pollution degree: 2 An environment that satisfies the following conditions. <ul style="list-style-type: none"><li>• Free of corrosive or explosive gases</li><li>• Free of exposure to water, oil or chemicals</li><li>• Free of dust, salts or iron dust</li></ul>
	Altitude	1,000 m or less
	Others	Free of static electricity, strong electromagnetic fields, magnetic fields or exposure to radioactivity
Supported motors	Permanent magnet, Synchronous AC rotary or linear motor	
Max. output frequency range	Must be lower than 500 [rev/sec]. Note: UL application: 400 [rev/sec] (200 V), 300 [rev/sec] (400 V). If UL is needed, the combination should be applied to UL on customer side.	
Supported scales for motor driving usage	EnDat2.1, EnDat2.2, HIPERFACE, Sin/Cos	
Supported scales for fully-closed usage	EnDat2.1, EnDat2.2, HIPERFACE, Sin/Cos	
Motor pole information for motor driving	Without hall sensor signals	Sigma-5 detecting function is available. In case of EnDat2.1, EnDat2.2 and HIPERFACE, the function should be carried out once (after that, recognized data will be used). In other cases, the function should be carried out each boot-up.
	With hall sensor signals	The data is used (any functions needed for the information).
Unsupported devices	Advanced option module safety: SGDV-OSA01A Fully-closed option module: SGDV-OFA01A	

## General Specification SGDV-OFB03A

# Safety Option Module

## Safety Module

This Safety Module implements safety functions that conform to EN ISO 13849-1 (the harmonized EU Machinery Directive) and are specified in the individual IEC 61800-5-2 standard. You can combine it with an SGD7S SERVOPACK to design optimum safety in a machine system according to industry needs.

## Model Designations

When ordering a SERVOPACK and a Safety Module separately, use the following Safety Module model number.

SGDV - OS A01 A

Option Module Safety      1st & 2nd      3rd ... 5th      6th      digit

1st & 2nd digit - Module Type	
Code	Module
OS	Option Module Safety

3rd ... 5th digit - Interface Specifications	
Code	Interface
A01	Safety Module

6th digit - Design Revision Order	
Code	Specification
A	Initial Design

## Applicable Standards and Functions

### Compliance with Safety Standards

Safety Standards	Applicable Standards	Products	
		SERVOPACK	SERVOPACK + Safety Module
Safety of Machinery	EN ISO13849-1: 2015 IEC 60204-1	✓	✓
Functional Safety	IEC 61508 Series IEC 62061 IEC 61800-5-2	✓	✓
EMC	IEC 61326-3-1	✓	✓

### Support for Functions defined in IEC61800-5-2

Safety functions are implemented by using the hard wire base block (HWBB) in the SERVOPACK.

Safety Function	Description	Applicable Products	
		SERVOPACK	SERVOPACK + Safety Module
Safe BaseBlock Function (SBB function)	This safety function is equivalent to an STO function. (It shuts OFF the power supply from the SERVOPACK to the motor.)	✓	✓
Safe BaseBlock with Delay Function (SBB-D function)	This safety function is equivalent to an SS1 function. (It monitors the deceleration operation of the motor for the specified time and then shuts OFF the power supply from the SERVOPACK to the motor.)	—	✓
Safe Position Monitor with Delay Function (SPM-D function)	This safety function is equivalent to an SS2 function. (It monitors the deceleration operation of the motor for the specified time and then monitors the position after the motor stops.)	—	✓
Safely Limit Speed with Delay Function (SLS-D function)	This safety function is equivalent to an SLS function. (It monitors the deceleration operation of the motor for the specified time and then monitors the speed of the motor to confirm that it remains in the allowable range.)	—	✓

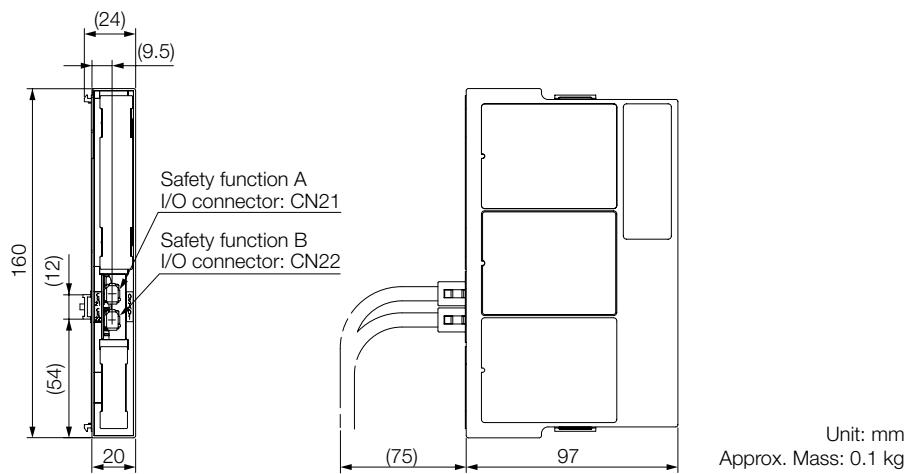

## Specifications and Ratings

## Basic Specifications

Compliance with UL Standards, EU Directives,  
and other Safety Standards (in Combination with SERVOPACK)

Item		Specification	
North American Safety Standards		UL61800-5-1 CSA C22.2 No.274	
European Directives	Machinery Directive (2006/42/EC)	EN ISO 13849-1: 2015

## INDEXER Module Power Loss

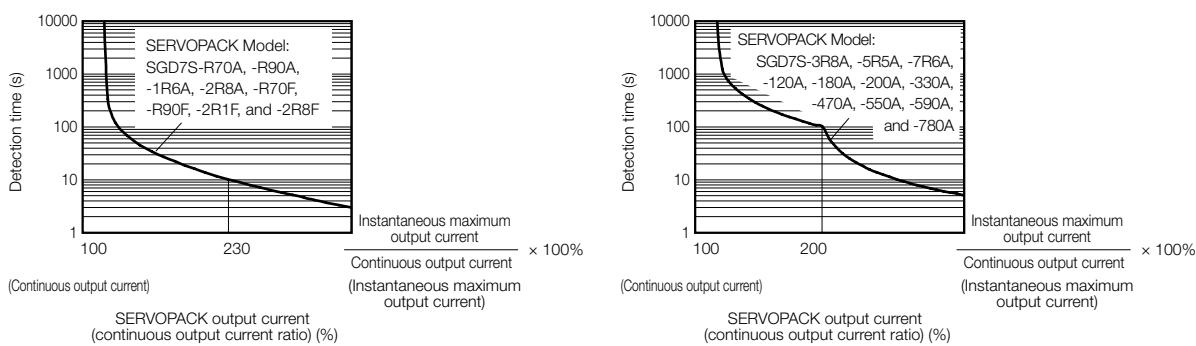

The power supply for an INDEXER Module is supplied from the control power supply of the SERVOPACK. The power loss is given in the following table.

Item	Specification
Power Supply Method	5.05 VDC
Maximum Operating Voltage	5.25 VDC
Maximum Operating Current	500 mA
Maximum Power Loss	2.6 W

## SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C. An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed. The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. For a YASKAWA-specified combination of SERVOPACK and Servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic (or force-motor speed characteristics) of the Servomotor.

## Specifications

The specification when the INDEXER Module is combined with a Command Option Attachable-Type SERVOPACK are given in the following table.

Item		Specification	
Control Method		IGBT-based PWM control, sine wave current drive	
Feedback	With Rotary Servomotor	Serial encoder: 17 bits (absolute encoder) 20 bits or 24 bits (incremental encoder/absolute encoder) 22 bits (absolute encoder)	
	With Linear Servomotor	• Absolute linear encoder (The signal resolution depends on the absolute linear encoder.) • Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.)	
Surrounding Air Temperature		0°C to 55°C	
Storage Temperature		-20°C to 85°C	
Surrounding Air Humidity		90% relative humidity max. (with no freezing or condensation)	
Storage Humidity		90% relative humidity max. (with no freezing or condensation)	
Vibration Resistance		4.9 m/s <sup>2</sup>	
Shock Resistance		19.6 m/s <sup>2</sup>	
Environmental Conditions	Degree of Protection	Class	SERVOPACK Model: SGD7S-
		IP10	R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A, 120A
		IP20	120AE0A008, 180A, 200A, 330A, 470A, 550A, 590A, 780A
	Pollution Degree	2	
		• Must be no corrosive or flammable gases. • Must be no exposure to water, oil, or chemicals. • Must be no dust, salts, or iron dust.	
	Altitude	1,000 m max.	
	Others	Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity UL 61800-5-1 (E147823), CSA C22.2 No.274, EN ISO13849-1: 2015, EN 55011 group 1 class A, EN 61000-6-2, EN 61000-6-4, EN 61800-3 (Category C2, Second environment), EN 50178, EN 61800-5-1, IEC 60204-1, IEC 61508 series, IEC 62061, IEC 61800-5-2, and IEC 61326-3-1	
Applicable Standards		SERVOPACK Model: SGD7S-	
Mounting		Mounting	
		Base-mounted	All Models
		Rack-mounted	R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A, 120A, 180A, 200A, 330A
		Duct-ventilated	470A, 550A, 590A, 780A
Performance	Speed Control Range	1:5,000 (At the rated torque, the lower limit of the speed control range must not cause the Servomotor to stop.)	
	Coefficient of Speed Fluctuation <sup>*1</sup>	±0.01% of rated speed max. (for a load fluctuation of 0% to 100%) 0% of rated speed max. (for a voltage fluctuation of ±10%) ±0.1% of rated speed max. (for a temperature fluctuation of 25°C ±25°C)	
	Torque Control Precision (Repeatability)	±1%	
	Soft Start Time Setting	0 s to 10 s (Can be set separately for acceleration and deceleration.)	
I/O Signals	Encoder Divided Pulse Putput	Phase A, phase B, phase C: Line-driver output Number of divided output pulses: Any setting is allowed	
	Overheat Protection Input	Number of input points: 1 Input voltage range: 0 V to ±5 V

# INDEXER Module

Continued from previous page.

Item		Specification
Communications	RS-422A Communications (CN3)	Interfaces 1:N Communications Axis Address Setting
		Up to N = 15 stations possible for RS-422A port
		Set with parameters.
Displays/ Indicators	USB Communications (CN7)	Interfaces Communication Standard
		Interface Personal computer (with SigmaWin+) Conforms to USB2.0 standard (12 Mbps).
Operating Methods	SERVOPACK	CHARGE and PWR indicators, and one-digit seven-segment display Refer to the following manual for details. Sigma-7-Series AC Servo Drive Sigma-7S SERVOPACK Command Option Attachable Type with INDEXER Module Product Manual (Manual No.: SIEP S800001 64)
		• Program table positioning in which steps are executed sequentially by commands given through contact input or serial communications • Positioning in which station numbers are specified by commands given through contact input or serial communications
		Max. Number of Steps 256 Max. Number of Tables 256 Max. Number of Stations 256
	Serial Communications Method	Serial command by 1-channel ASCII code Communications specifications: RS-422/485 (50 m max.) Connection topology: Multi-drop connection (16 axes max.) Baud rate: 9,600, 19,200, 38,400 bps
		Other Functions
	Analog Monitor (CN5)	Registration (positioning by external signals), origin return Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA Settling time (±1%): 1.2 ms (Typ)
		Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.
		Built-in (An external resistor must be connected to the SGD7S-470A to -780A.) Refer to the following section for details or Built-In Regenerative Resistor.
		Stopping with a dynamic brake (DB), coasting to a stop, performing a hard stop, or performing a smooth stop (decelerating to a stop) for a CCW-OT (CCW Drive Prohibit Input) signal or CW-OT (CW Drive Prohibit Input) signal.
		Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.
Protective Functions	Utility Functions	Gain adjustment, alarm history, jogging, origin search, etc.
		/HWBB1 and /HWBB2: Base block signals for Power Modules
		EDM1: Monitors the status of built-in safety circuit (fixed output). ISO13849-1 PLe (Category 3), IEC61508 SIL3
Applicable Option Modules		Fully-Closed Module You cannot use a Safety Module if you are using an INDEXER Module.

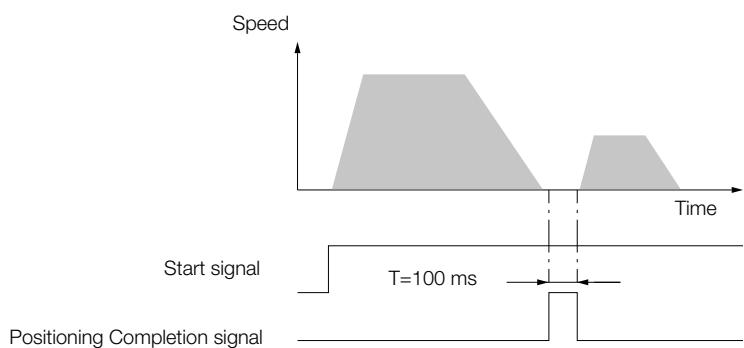

\*1. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

\*2. Always perform risk assessment for the system and confirm that the safety requirements are met.

	:	:	:	:	:	:
	:	:	:	:	:	:
	15	1	1	1	1	5500

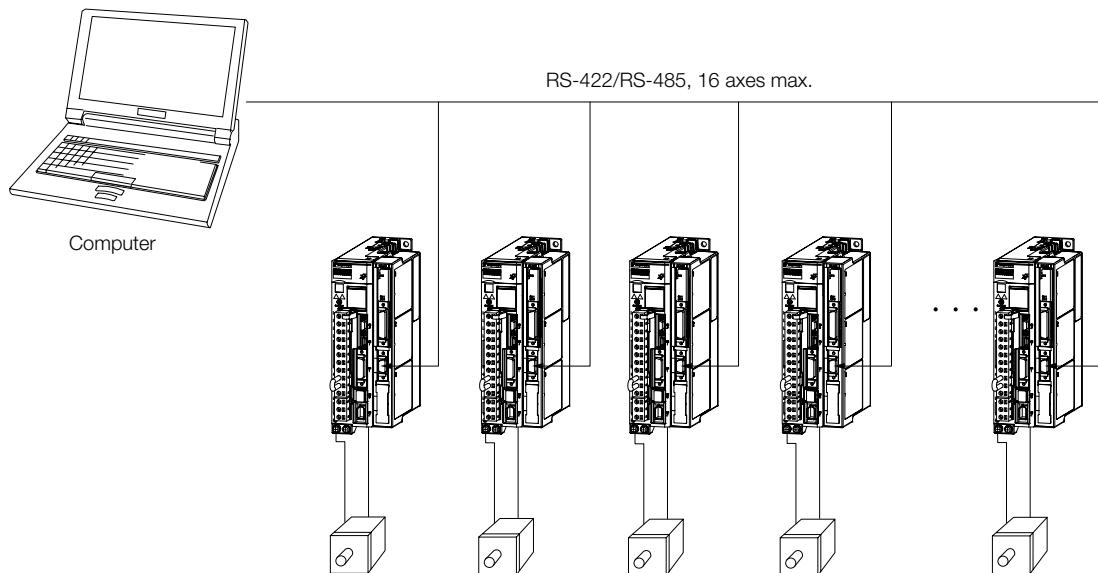

Note: 1: Signal is ON (active), 0: Signal is OFF (inactive).

\*1. Forward operation at the jog speed is performed while the /JOGP signal is ON.

\*2. Reverse operation at the jog speed is performed while the /JOGN signal is ON.

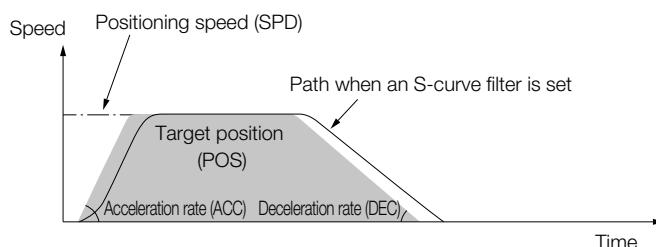

With serial commands, ASCII command strings are sent to the INDEXER Module through RS-422 or RS-485 communications and these commands are interpreted and executed immediately. You can use general-purpose serial communications (RS422/RS485) to perform independent control of up to 16 axes from one host controller (e.g., PC or HMI).

```

1SVON          # Servo turned ON.
1POSI=400000   # Set relative position to 400,000.
1SPD=2000      # Set speed to 2,000.
1ACC=200       # Set acceleration rate to 200.
1DEC=100       # Set deceleration rate to 100.
1ST            # Start operation.
:

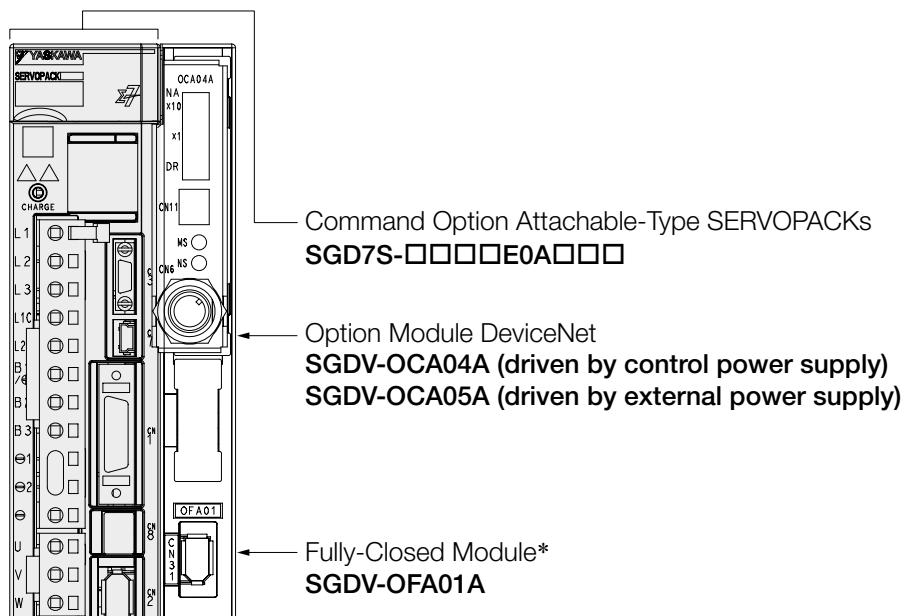

```

# DeviceNet Modules

## Configuration

A Sigma-7S Single-axis DeviceNet Module-Mounted SERVOPACK is a Command Option Attachable-Type SERVOPACK with a DeviceNet Module mounted on the side of the SERVOPACK. Positioning and origin returns can be performed by sending commands from the host controller (DeviceNet master).

## Purchasing a Module separately

One Option Case Kit is required for each SERVOPACK.

Option Case Kit model

**SGDV-OZA01A**

DeviceNet Modules

**SGDV-OCA04A** (driven by control power supply)

**SGDV-OCA05A** (driven by external power supply)

Fully-Closed Module

**SGDV-OFA01A**

Overvoltage Category						III			

\*1. This is the net value at the rated load.

\*2. The value is 0.25 A for the SGD7S-120A00A008.

Model SGD7S-		180A	200A	330A	470A	550A	590A	780A

\* This is the net value at the rated load.

## DeviceNet Module Ratings

The power supply method and power loss of a DeviceNet Module depend on the model of the DeviceNet Module.

### SGDV-OCA04A (Interface: Driven by Control Power Supply)

The specifications of the SGDV-OCA04A DeviceNet Module are given in the following table.

Item	Specification	
	DeviceNet Communications Section	Control Section
Power Supply Method	Supplied from the DeviceNet communications cable.	Supplied from the control power supply of a Command Option Attachable-Type SERVOPACK.
Minimum Operating Voltage	11 VDC	
Maximum Operating Voltage	25 VDC	Included in the current consumption of the Command Option Attachable-Type SERVOPACK.
Maximum Operating Current	25 mA	
Maximum Power Loss	625 mW	

### SGDV-OCA05A (Interface: Driven by External Power Supply)

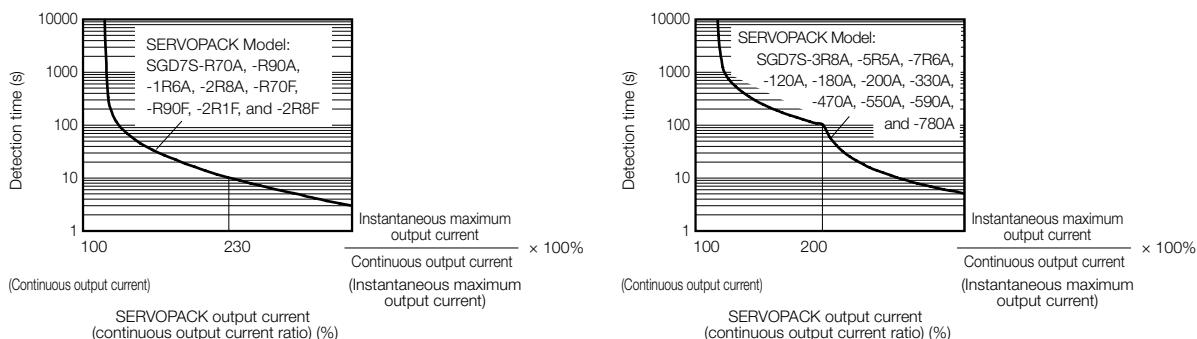

The specifications of the SGDV-OCA05A DeviceNet Module are given in the following table.

Item	Specification	
	DeviceNet Communications Section	Control Section
Power Supply Method	Supplied from the DeviceNet communications cable.	
Minimum Operating Voltage		11 VDC
Maximum Operating Voltage		25 VDC
Maximum Operating Current		100 mA for 24-VDC power supply 200 mA for 11-VDC power supply
Maximum Power Loss		2.4 W

## SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C. An overload alarm (A.710 or A.720) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the application line) is performed. The actual overload detection level will be the detection level of the connected SERVOPACK or Servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the Servomotor.

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

For a YASKAWA-specified combination of SERVOPACK and Servomotor, maintain the effective torque (or effective force) within the continuous duty zone of the torque-motor speed characteristic (or force-motor speed characteristics) of the Servomotor.

## Specifications

The specification when the INDEXER Module is combined with a Command Option Attachable-Type SERVOPACK are given in the following table.

Item		Specification	
Control Method		IGBT-based PWM control, sine wave current drive	
Feedback	With Rotary Servomotor	Serial encoder: 17 bits (absolute encoder) 20 bits or 24 bits (incremental encoder/absolute encoder) 22 bits (absolute encoder)	
	With Linear Servomotor	<ul style="list-style-type: none"> <li>Absolute linear encoder (The signal resolution depends on the absolute linear encoder.)</li> <li>Incremental linear encoder (The signal resolution depends on the incremental linear encoder or Serial Converter Unit.)</li> </ul>	
Environmental Conditions	Surrounding Air Temperature	0°C to 55°C	
	Storage Temperature	-20°C to 85°C	
	Surrounding Air Humidity	90% relative humidity max. (with no freezing or condensation)	
	Storage Humidity	90% relative humidity max. (with no freezing or condensation)	
	Vibration Resistance	4.9 m/s <sup>2</sup>	
	Shock Resistance	19.6 m/s <sup>2</sup>	
	Degree of Protection	Class	SERVOPACK Model: SGD7S-
		IP20	R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A, 120A
		IP10	120AE0A008, 180A, 200A, 330A, 470A, 550A, 590A, 780A
	Pollution Degree	2	<ul style="list-style-type: none"> <li>Must be no corrosive or flammable gases.</li> <li>Must be no exposure to water, oil, or chemicals.</li> <li>Must be no dust, salts, or iron dust.</li> </ul>
Applicable Standards	Altitude	1,000 m max.	
	Others	Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity	
		UL 61800-5-1 (E147823), CSA C22.2 No.274, EN ISO13849-1: 2015, EN 55011 group 1 class A, EN 61000-6-2, EN 61000-6-4, EN 61800-3 (Category C2, Second environment), EN 50178, EN 61800-5-1, IEC 60204-1, IEC 61508 series, IEC 62061, IEC 61800-5-2, and IEC 61326-3-1	
Mounting		Mounting	SERVOPACK Model: SGD7S-
Base-mounted Rack-mounted Duct-ventilated		All Models	
		R70A, R90A, 1R6A, 2R8A, 3R8A, 5R5A, 7R6A, 120A, 180A, 200A, 330A	
		Duct-ventilated	470A, 550A, 590A, 780A
Performance	Speed Control Range	1:5,000 (At the rated torque, the lower limit of the speed control range must not cause the Servomotor to stop.)	
	Coefficient of Speed Fluctuation <sup>*1</sup>	±0.01% of rated speed max. (for a load fluctuation of 0% to 100%)	
	Torque Control Precision (Repeatability)	0% of rated speed max. (for a voltage fluctuation of ±10%)	
	Soft Start Time Setting	±0.1% of rated speed max. (for a temperature fluctuation of 25°C ±25°C) 0 s to 10 s (Can be set separately for acceleration and deceleration.)	
I/O Signals	Encoder Divided Pulse Output	Phase A, phase B, phase C: Line-driver output Number of divided output pulses: Any setting is allowed.	
	Linear Servomotor Overheat Protection Signal Input	Number of input points: 1 Input voltage range: 0 V to ±5 V	
	Sequence Input Signals	Fixed Input	Allowable voltage range: 24 VDC ±20% Number of input points: 4 Input method: Sink inputs or source inputs Input Signals <ul style="list-style-type: none"> <li>CCW-OT (CCW Drive Prohibit Input) signal</li> <li>CW-OT (CW Drive Prohibit Input) signal</li> <li>/HOME (Origin Signal Input) signal</li> <li>EXSTOP (External Stop Input) Signal</li> </ul> Positive or negative logic can be changed in the parameters.
	Sequence Output Signals	Fixed Output	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 4 Output Signals <ul style="list-style-type: none"> <li>ALM (Servo Alarm Output) signal</li> <li>/WARN (Warning Signal Output) signal</li> <li>/BK (Brake) signal</li> <li>/S-RDY (Servo Ready Output) signal</li> </ul>
Communications	RS-422A Communications (CN3)	Interface	Digital Operator (JUSP-OP05A-1-E)
	USB Communications (CN7)	Interface Communications Standard	Conforms to USB2.0 standard (12 Mbps)
Displays / Indicators	SERVOPACK	CHARGE and PWR indicators, and one-digit seven-segment display	
	DeviceNet Module	Refer to the following manual for details. Sigma-7-Series AC Servo Drive Sigma-7S SERVOPACK Command Option Attachable Type with DeviceNet Module Product Manual (Manual No.: SIEP S800001 70)	

Continued on next page.

Item		Specification			
Operating Methods	Reference Method	Operation Specifications	Positioning via DeviceNet communications		
		Reference Inputs	DeviceNet communications Commands: Movement references (positioning or speed) and origin returns		
	Position Control Functions	Acceleration/Deceleration Methods	Linear, asymmetrical, exponential, and S-curve acceleration/deceleration		
		Operating Methods	Simple positioning, origin returns, continuous operation, and switching to positioning		
	Built-in Functions	Fully-Closed Loop Control	Supported.		
		Position Data Latching	Position data can be latched on phase C, the origin signal, of an external signal.		
	DeviceNet Communications	Communications Methods	DeviceNet I/O communications and explicit messages		
		Topology	Multidrop or T-branching <sup>*2</sup>		
		Baud Rate	125 kbps, 250 kbps, or 500 kbps (Set on rotary switch (DR).)		
		Cables	Special cables (OMRON DCA1-5CN02F1 Cable with Connectors or the equivalent.)		
		Maximum Number of Nodes	64 nodes (including the master, Maximum number of slaves: 63)		
	Node Address Setting	0 to 63 (Set on NA ×10 and ×1 rotary switches.)			
Analog Monitor (CN5)					
Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA Settling time (±1%): 1.2 ms (Typ)					
Dynamic Brake (DB)					
Activated when a servo alarm or overtravel (OT) occurs, or when the power supply to the main circuit or servo is OFF.					
Regenerative Processing					
Built-in (An external resistor must be connected to the SGD7S-470A to -780A.) Refer to the following section for details or Built-In Regenerative Resistor.					
Overtravel (OT) Prevention					
Stopping with a dynamic brake (DB), coasting to a stop, performing a hard stop, or performing a smooth stop (decelerating to a stop) for a CCW-OT (CCW Drive Prohibit Input) signal or CW-OT (CW Drive Prohibit Input) signal.					
Protective Functions					
Overcurrent, overvoltage, low voltage, overload, regeneration error, etc.					
Utility Functions					
Safety Functions	Input	/HWBB1 and /HWBB2: Base block signals for Power Modules			
	Output	EDM1: Monitors the status of built-in safety circuit (fixed output)			
	Applicable Standards <sup>*3</sup>	ISO13849-1 PLd (Category 3), IEC61508 SIL3			
Applicable Option Modules					
Fully-Closed Module Note: You cannot use a Safety Module if you are using a DeviceNet Module.					

\*1. The coefficient of speed fluctuation for load fluctuation is defined as follows:

$$\text{Coefficient of speed fluctuation} = \frac{\text{No-load motor speed} - \text{Total-load motor speed}}{\text{Rated motor speed}} \times 100\%$$

\*2. Externally connected terminating resistance is required.

\*3. Always perform risk assessment for the system and confirm that the safety requirements are met.

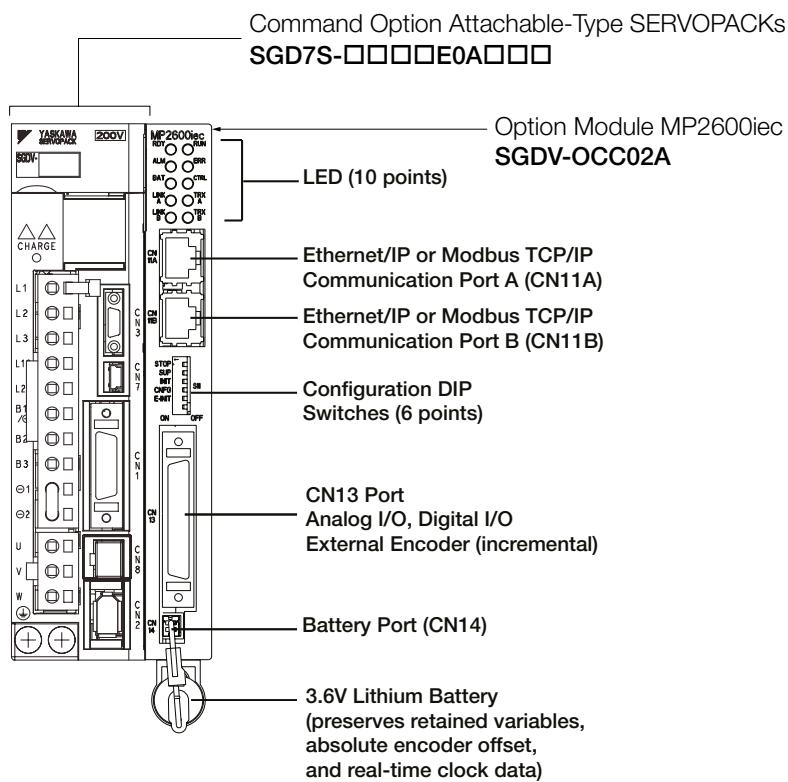

The following table gives the specifications of the DeviceNet Module.

Item		Specification	
		SGDV-OCA04A	SGDV-OCA05A
Mounting Location		Mounted to the side of a Command Option Attachable-Type SERVOPACK.	
Power Supply Method	Control Section	Supplied from the control power supply of a Command Option Attachable-Type SERVOPACK.	Supplied from the DeviceNet communications cable.
	DeviceNet Communications Section	Supplied from the DeviceNet communications cable.	
Current Consumption	Control Section	Included in the current consumption of the Command Option Attachable-Type SERVOPACK.	For 24-VDC power supply: 100 mA max., For 11-VDC power supply: 200 mA max.
	DeviceNet Communications Section	25 mA max.	

# MP2600iec Single Axis Machine Controller Option

## Configuration

The MP2600iec 1.5 Axis Motion Controller Option for the Sigma-5 amplifier provides a compact, all-in-one, servo/controller package with the following features:

## Purchasing a Module separately

Ordering a SERVOPACK and a MP2600iec Single Axis Machine Controller Option Module separately.  
Please use the following model number.

**VMK-U-MP26A01R001**

This kit includes the option module (SGDV-OCC02A), mounting kit (SGDV-OZC01A), battery holder and battery.

## Specifications

Items		Specifications		
Environmental Conditions	Ambient Operating Temperature	0 to 55°C		
	Ambient Storage Temperature	-20°C to +85°C		
	Ambient Operating Humidity	90% RH or less (with no condensation)		
	Ambient Storage Humidity	90% RH or less (with no condensation)		
	Protection Class / Pollution Degree	Protection class: IP10, Pollution degree: 2 An environment that satisfies the following conditions: <ul style="list-style-type: none"><li>• Free of corrosive or explosive gases</li><li>• Free of exposure to water, oil or chemicals</li><li>• Free of dust, salts or iron dust</li></ul>		
	Operating Altitude	1,000 m above sea level or lower		
Mechanical Operating Conditions	Vibration Resistance	4.9 m/s <sup>2</sup>		
	Shock Resistance	19.6 m/s <sup>2</sup>		
	Others	Free of static electricity, strong electromagnetic fields, magnetic fields or exposure to radioactivity		
CPU		200 MHz, 32 bit, ARM 9		
Memory	SDRAM	32 MB		
	SRAM	512 kB with battery backup		
	Flash	4 MB flash. Code and parameter storage		
Operator interface	LED	10 LEDs (red and green - operating mode, communication and error status)		
	User Configuration	6x DIP switch (operating mode and communication configuration)		
User I/O	Controller Side (CN13)	Network	2x 100baseTX Ethernet	
		Digital input	8 programmable inputs	
		Digital output	8 programmable outputs	
		Analog input	1 ch., +/- 10V, 16 bit	
		Analog output	1 ch., +/- 10V, 16 bit	
		Pulse Counter	RS-422-compatible pulse counter input (quadrature, pulse and direction, and up/down counter modes) with 5, 12, and 24V position latch inputs	
	Servo Side (CN1)	Sequence Input	Number of Inputs: 7 (1 registration input latches external encoder in 5 µs) Functions: The signal allocation and positive/negative logic can be modified. Forward run prohibited (P-OT), reverse run prohibited (N-OT), forward torque limit (/P-CL), reverse torque limit (/N-CL), general-purpose input signal (/SI0 to /SI6)	
			Servo Alarm (ALM)	
		Sequence Input	Number of Outputs: 3 Functions: The signal allocation and positive/negative logic can be modified. Positioning completion (/COIN), speed coincidence detection (/V-CMP), servomotor rotation detection (/TGON), servo ready (/S-RDY), torque limit detection (/CLT), speed limit detection (VLT), brake (/BK), warning (/WARN), near (/NEAR)	
			OPC (Client and Server required) Ethernet/IP Modbus/TCP	
Network capability		IEC61131/PLCopen Web interface		
Programming standards		1 controlled axis and one external encoder input plus virtual axis		
Diagnostic and configuration interface		Servo-Side Safety Functions		
Servo-Side Safety Functions	Input	/HWBB1, /HWBB2: Baseblock signal for power module		
	Output	EDM1: Status monitor (fixed output) of built-in safety circuit		

\* Allocated I/O can also be used as programmable I/O.

## Selecting Cables

### Cable Selection

Description		Length	Order No.	Appearance	Details
CN13 Cables for I/O Signals	Connector Kit		JZSP-CSI9-1-E	Soldered	(1)
	Connector Terminal Converter Unit		0.5 m CBK-U-MP2B-A5 1 m CBK-U-MP2B-01 3 m CBK-U-MP2B-03	Terminal Block and 0.5 m Connection Cable	(2)
	Flying Lead Cable		0.5 m CFC-U-MP2B-A5 1 m CFC-U-MP2B-01 3 m CFC-U-MP2B-03		(3)
	Category: CAT5e Shield specifications: S/UTP or S/STP Cable length: 50 m maximum				
	[CN11A] [CN11B]				
	Ethernet/EtherCAT/PROFINET Cables for Industrial Use				

### (1) Connector Kit for CN13

Use the following connector and cable to assemble the cable. The CN13 connector kit includes one case and one connector.

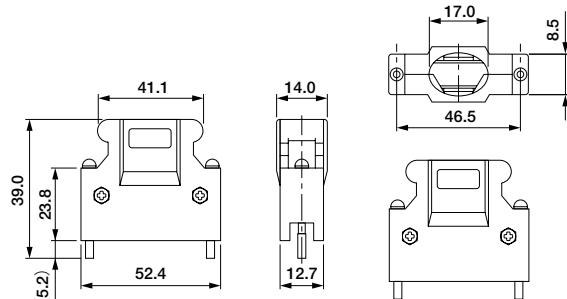

Connector Kit Model	Case		Connector	
	Model	Qty	Model	Qty
JZSP-CSI9-1-E	10350-52Z0-008*	1 set	10150-3000PE* (Soldered)	1

\* : Manufactured by Sumitomo 3M Ltd.

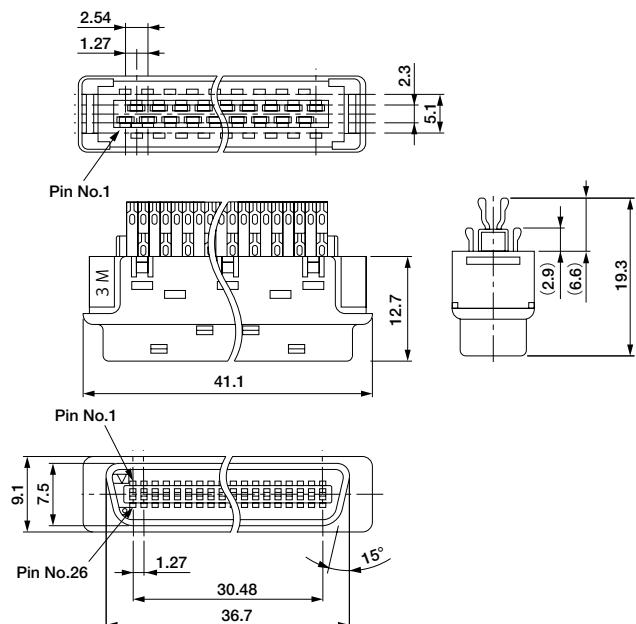

### Cable Size

Item	Specifications
Cable	Use twisted-pair or twisted-pair shielded wire.
Applicable Wires	AWG 24, 26, 28, 30
Cable Finished Diameter	16 dia. max.

### Dimensional Drawings of Case

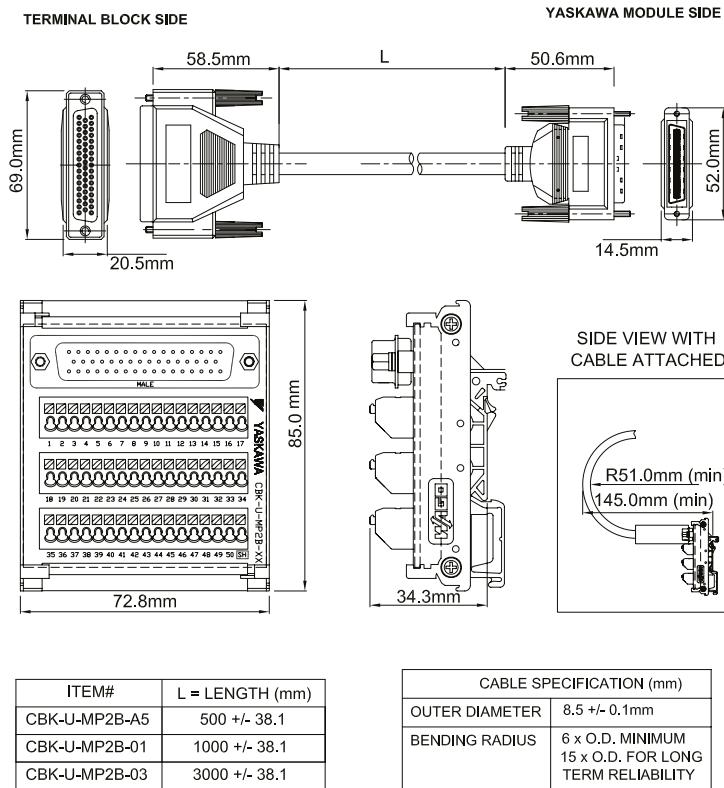

### Dimensional Drawings of Connector

# Periphery

\*1. The peripheral devices are described using a MECHATROLINK-III Communications Reference SERVOPACK as an example. The shapes of the connectors may be different for other interfaces.

\*2. The connected devices depend on the interface.

For MECHATROLINK-II communications references: Other MECHATROLINK-II stations

For analog voltage/pulse train references: There is no CN6 connector.

\*3. A Holding Brake Power Supply Unit is required to use a Servomotor with a Holding Brake. Holding Brake Power Supply Units for 24 VDC are not provided by YASKAWA. Obtain these from other manufacturers.

Never connect Holding Brake Power Supply Units with different output voltages to a SERVOPACK. Overcurrent may result in burning in the brake.

\*4. If you use a Servomotor with a Holding Brake, select a brake relay according to the power supply voltage and current of the brake. YASKAWA does not recommend any particular brake relays. Select an appropriate brake relay using the selection method of the brake relay manufacturer.

\*5. The power supply for the holding brake is not provided by YASKAWA. Select a power supply based on the holding brake specifications. If you use a 24-V brake, install a separate power supply for the 24-VDC power supply from other power supplies, such as the one for the I/O signals of the CN1 connector. If the power supply is shared, the I/O signals may malfunction.

## Peripheral Device Selection Table

### Peripheral Device Selection Table - SGD7S

Main Circuit Power Supply	Max. Appl. Motor Capacity [kW]	SGD7S-	Noise Filter <sup>*1</sup>	DC Reactor <sup>*2</sup>	Magnetic Contactor	Surge Absorber	Digital Operator

	1.5	120A□ □□008			SC-5-1		

Device	Enquires
FESS Noise Filters	EPA GmbH
Noise Filters	YASKAWA Controls Co., Ltd.
Surge Absorbers	
DC Reactors	Fuji Electric FA Components & Systems Co., Ltd.
Magnetic Contactors	

\*1. Some Noise Filters have large leakage currents. The grounding conditions also affect the size of the leakage current. If necessary, select an appropriate leakage detector or leakage breaker taking into account the grounding conditions and the leakage current from the Noise Filter.

\*2. The last digit of an RoHS-compliant serial number is R. Consult with YASKAWA Controls Co., Ltd. for RoHS-compliant reactors.

Note:

1. Consult the manufacturer for details on peripheral devices.
2. For Digital Operator Converter cables, refer to the selection table for each type of SERVOPACK.
3. Refer to the following manual for the following information.
  - Dimensional drawings, ratings, and specifications of peripheral devices
  - Sigma-7-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

## Molded-case Circuit Breakers and Fuses

### Using an AC Power Supply

Use a molded-case circuit breaker and fuse to protect the power supply line. They protect the power line by shutting OFF the circuit when overcurrent is detected. Select these devices based on the information in the following tables.

Note:

- The following tables also provide the net values of the current capacity and inrush current.  
 Select a fuse and a molded-case circuit breaker that meet the following conditions.
- Main circuit and control circuit: No breaking at three times the current value given in the table for 5 s.
  - Inrush current: No breaking at the current value given in the table for 20 ms.

### SGD7S SERVOPACKs

Main Circuit Power Supply	Max. Appl. Motor Capacity [kW]	SGD7S-	Power Supply Capacity per SERVOPACK [kVA]*	Current Capacity		Inrush Current		Rated Voltage

	1.5	120A□□008	4.0	16					

\* This is the net value at the rated load.

## SGD7W SERVOPACKs

Main Circuit Power Supply	Max. Appl. Motor Capacity [kW]	SGD7W-	Power Supply Capacity per SERVOPACK [kVA] <sup>1</sup>	Current Capacity		Inrush Current		Rated Voltage	
				Main Circuit [A] <sup>1</sup>	Control Power Supply [A]	Main Circuit [A0-p]	Control Power Supply [A0-p]	Fuse [V]	MCCB [V]
Three-phase, 200 VAC	0.2	1R6A	1.0	2.5	0.25	34	34	250	240
	0.4	2R8A	1.9	4.7					
	0.75	5R5A	3.2	7.8					
	1.0	7R6A	4.5	11					
Single-phase, 200 VAC	0.2	1R6A	1.3	5.5					
	0.4	2R8A	2.4	11					
	0.75	5R5A <sup>2</sup>	2.7	12					

<sup>1</sup>. This is the net value at the rated load.

<sup>2</sup>. If you use the SGD7W-5R5A with a single-phase 200-VAC power supply input, derate the load ratio to 65%. An example is given below.

If the load ratio of the first axis is 90%, use a load ratio of 40% for the second axis so that average load ratio for both axes is 65% ((90% + 40%)/2 = 65%).

## SGD7C SERVOPACKs

Main Circuit Power Supply	Max. Appl. Motor Capacity [kW]	SGD7C-	Power Supply Capacity per SERVOPACK [kVA] <sup>1</sup>	Current Capacity		Inrush Current		Rated Voltage	
				Main Circuit [A] <sup>1</sup>	Control Power Supply [A]	Main Circuit [A0-p]	Control Power Supply [A0-p]	Fuse [V]	MCCB [V]
Three-phase, 200 VAC	0.2	1R6A	1.0	2.5	0.25	34	34	250	240
	0.4	2R8A	1.9	4.7					
	0.75	5R5A	3.2	7.8					
	1.0	7R6A	4.5	11					
Single-phase, 200 VAC	0.2	1R6A	1.3	5.5					
	0.4	2R8A	2.4	11					
	0.75	5R5A <sup>2</sup>	2.7	12					

<sup>1</sup>. This is the net value at the rated load.

<sup>2</sup>. If you use the SGD7W-5R5A with a single-phase 200-VAC power supply input, derate the load ratio to 65%. An example is given below.

If the load ratio of the first axis is 90%, use a load ratio of 40% for the second axis so that average load ratio for both axes is 65% ((90% + 40%)/2 = 65%).

## Using a DC Power Supply

This section gives the power supply specifications for using a DC power supply input. Use the Fuses given in the following tables to protect the power supply line and SERVOPACK. They protect the power line by shutting OFF the circuit when overcurrent is detected.

Note: The following tables provide the net values of the current capacity and inrush current.

### SGD7S SERVOPACKs

Main Circuit Power Supply	SGD7S-	Power Supply Capacity per SERVOPACK [kVA]*	Current Capacity		Inrush Current		External Fuse		
			Main Circuit [A] <sup>†1</sup>	Control Power Supply [A]	Main Circuit [A0-p]	Control Power Supply [A0-p]	Order Number <sup>†2</sup>	Current Rating [A]	Voltage Rating [Vdc]
270 VDC	R70A	0.2	0.5	0.2	34	34	3,5URGJ17/16UL	16	400
	R90A	0.3	1.0				3,5URGJ17/20UL	20	
	1R6A	0.5	1.5				3,5URGJ17/40UL	40	
	2R8A	1.0	3.0				3,5URGJ17/63UL	63	
	3R8A	1.3	3.8				3,5URGJ17/100UL	100	
	5R5A	1.6	4.9	0.25	(5Ω external)	34	3,5URGJ23/160UL	160	
	7R6A	2.3	6.9				3,5URGJ23/200UL	200	
	120A								
	120A□□□008	3.2	11						
	180A	4.0	14						
	200A	5.9	20						
	330A	7.5	34						
	470A	10.7	36	0.3	(5Ω external)	34	3,5URGJ17/100UL	100	
	550A	14.6	48				3,5URGJ23/160UL	160	
	590A	21.7	68				3,5URGJ23/200UL	200	
	780A	29.6	92						

\*1. This is the net value at the rated load.

\*2. These Fuses are manufactured by MERSEN Japan.

\*3. If you use a DC power supply input with any of the following SERVOPACKs, externally connect an inrush current limiting circuit and use the power ON and OFF sequences recommended by YASKAWA: SGD7S-330A, -470A, -550A, -590A, or -780A.

There is a risk of equipment damage. For information on the power ON and OFF sequences, refer to the product manual for the type of references used by your SERVOPACK.

### SGD7W SERVOPACKs

Main Circuit Power Supply	SGD7S-	Power Supply Capacity per SERVOPACK [kVA]*	Current Capacity		Inrush Current		External Fuse		
			Main Circuit [A] <sup>†1</sup>	Control Power Supply [A]	Main Circuit [A0-p]	Control Power Supply [A0-p]	Order Number <sup>†2</sup>	Current Rating [A]	Voltage Rating [Vdc]
270 VDC	1R6A	1.0	3.0	0.25	34	34	3,5URGJ17/40UL	40	400
	2R8A	1.9	5.8				3,5URGJ17/63UL	63	
	5R5A	3.2	9.7						
	7R6A	4.5	14						

\*1. This is the net value at the rated load.

\*2. These Fuses are manufactured by MERSEN Japan.

# Regenerative Resistors

## Types of Regenerative Resistors

The following regenerative resistors can be used.

- Built-in regenerative resistors: Some models of SERVOPACKs have regenerative resistors built into them.
- External regenerative resistors: These resistors are used when the smoothing capacitor and builtin regenerative resistor in the SERVOPACK cannot consume all of the regenerative power. Use YASKAWA SigmaSize+, an AC Servo drive capacity selection program, to determine if a regenerative resistor is required.

Note: If you use an External Regenerative Resistor, you must change the setting of the Pn600 (Regenerative Resistor Capacity) or Pn603 (Regenerative Resistance) parameters.

## Selection Table

SERVOPACK Model			Built-In Regenerative Resistor	External Regenerative Resistor	Contents
SGD7S-	SGD7W-	SGD7C-			
R70A, R90A, 1R6A, 2R8A, R70F, R90F, 2R1F, 2R8F	–	–	–	Basically not required	There is no built-in regenerative resistor, but normally an external regenerative resistor is not required. Install an external regenerative resistor when the smoothing capacitor in the SERVOPACK cannot process all the regenerative power. <sup>1</sup>
3R8A, 5R5A, 7R6A, 120A, 180A, 200A, 330A	1R6A, 2R8A, 5R5A, 7R6A	1R6A, R8A, 5R5A, 7R6A	Standard feature <sup>2</sup>	Basically not required	A built-in regenerative resistor is provided as a standard feature. Install an external regenerative resistor when the built-in regenerative resistor cannot process all the regenerative power. <sup>1</sup>
470A, 550A, 590A, 780A	–	–	–	Required <sup>3</sup>	A built-in regenerative resistor is not provided. An External Regenerative Resistor is required. If the External Regenerative Resistor is not connected to the SERVOPACK, a Regeneration Alarm (A.300) will occur.

\*1. Use YASKAWA SigmaSize+, an AC Servo drive capacity selection program, to select an external regenerative resistor.

\*2. Refer to the Built-In Regenerative Resistor section for the specifications of built-in regenerative resistors.

\*3. Regenerative Resistor Units are available. Refer to that section for details.

## Built-In Regenerative Resistor

The following table gives the specifications of the built-in regenerative resistors in the SERVOPACKs and the amount of regenerative power (average values) that they can process.

SERVOPACK Model			Built-In Regenerative Resistor		Regenerative Power Processing Capacity of Built-In Regenerative Resistor [W]	Minimum Allowable Resistance [Ω]
SGD7S-	SGD7W-	SGD7C-	Resistance [Ω]	Capacity [W]		
R70A, R90A, 1R6A, 2R8A, R70F, R90F, 2R1F, 2R8F	–	–	–	–	–	40
3R8A, 5R5A, 7R6A	1R6A, 2R8A	1R6A, 2R8A	40	40	8	40
120A	–	–	20	60	10	20
120A□□□008, 180A, 200A	5R5A, 7R6A	5R5A, 7R6A	12	60	16	12
330A	–	–	8	180	36	8
470A	–	–	(6.25) <sup>1</sup>	(880) <sup>1</sup>	(180) <sup>1</sup>	5.8
550A, 590A, 780A	–	–	(3.13) <sup>2</sup>	(1,760) <sup>2</sup>	(350) <sup>2</sup>	2.9

\*1. Values in parentheses are for the optional JUSP-RA04-E Regenerative Resistor Unit.

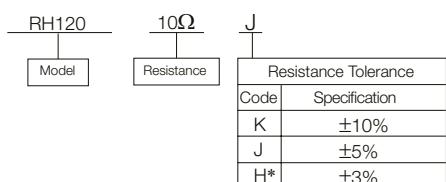

\*2. Values in parentheses are for the optional JUSP-RA05-E Regenerative Resistor Unit.

## External Regenerative Resistors

Model	Specification	Mass	Wire Size	Manufacturer	Inquiries
RH120	70 W, 1 Ω to 100 Ω	282 g			
RH150	90 W, 1 Ω to 100 Ω	412 g	AWG16 (1.25 mm <sup>2</sup> )		
RH220	120 W, 1 Ω to 100 Ω	500 g			
RH220B	120 W, 1 Ω to 100 Ω	495 g		Iwaki Musen Kenkyusho Co., Ltd.	
RH300C	200 W, 1 Ω to 10 kΩ	850 g		Iwaki Musen Kenkyusho Co., Ltd.	YASKAWA Controls Co., Ltd.
RH450	150 W, 1 Ω to 100 Ω	880 g	AWG14 (2.0 mm <sup>2</sup> )		
RH450FY	150 W, 2 Ω to 100 Ω	1.3 kg			
RH500	300 W, 2 Ω to 50 Ω	1.4 kg			

Note:

1. Consult YASKAWA Controls Co., Ltd. if you require a RoHS-compliant resistor.
2. Consult YASKAWA Controls Co., Ltd. for the model numbers and specifications of resistors with Thermal Protector.

\* There is no RH450FY model that has a resistance tolerance of H (±3%).

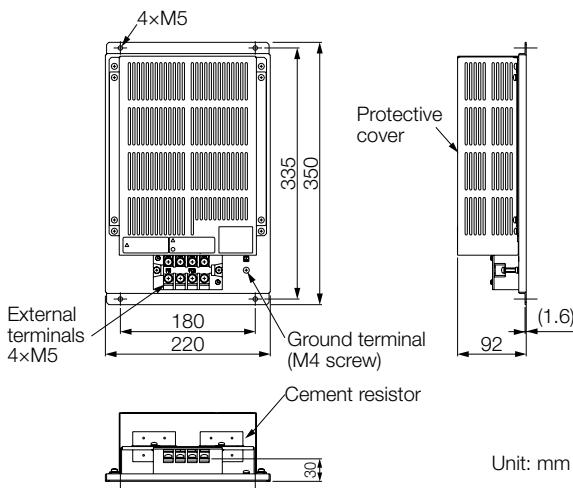

## Regenerative Resistor Units

SERVOPACK Model SGD7S-	Regenerative Resistor Unit Model	Specifications	Allowable Power Loss
470A	JUSP-RA04-E	6.25 Ω, 880 W	180 W
550A, 590A or 780A	JUSP-RA05-E	3.13 Ω, 1,760 W	350 W

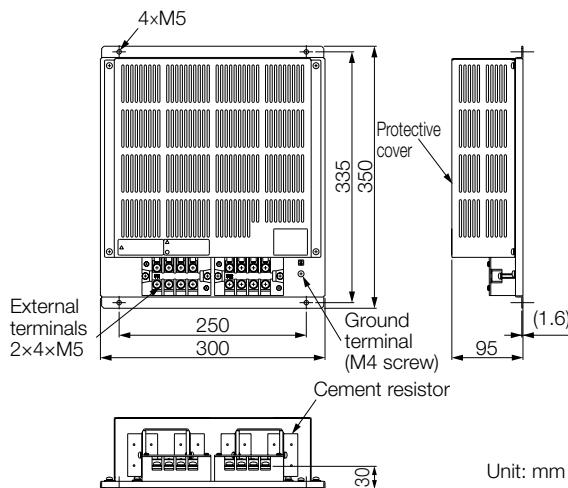

Note: If you use only the above Regenerative Resistor Units, you do not need to change the setting of the Pn600 (Regenerative Resistor Capacity) or Pn603 (Regenerative Resistance) parameters.

## External Dimensions

**JUSP-RA04-E**

**JUSP-RA05-E**

# Batteries for Servomotors with Absolute Encoders

If you use an absolute encoder, you can use an Encoder Cable with a Battery Case connected to it to supply power and retain the absolute position data.

You can also retain the absolute position data by supplying power from a battery on the host controller.

Note: A Battery Case is not required if you use a Servomotor with a Batteryless Absolute Encoder and connect a battery to the host controller.

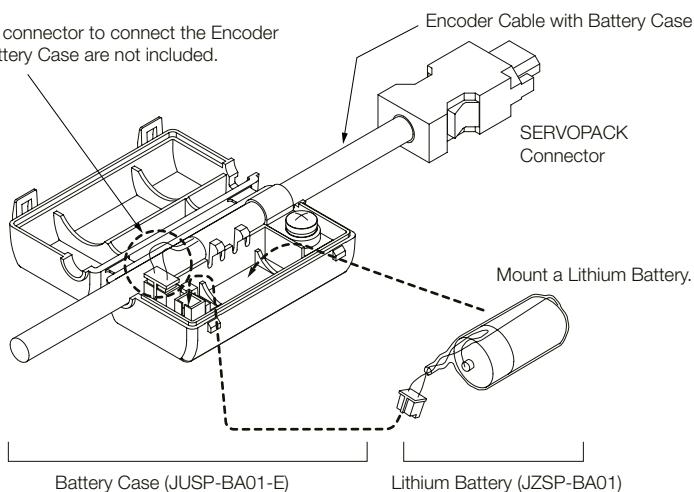

## Using Encoder Cables with Battery Cases

A Battery Case is attached to an Encoder Cable with a Battery Case. To replace the battery, obtain a Lithium Battery (JZSP-BA01) and mount it in the Battery Case.

1. You cannot attach the Battery Case to an Incremental Encoder Cable.
2. Install the Battery Case where the surrounding air temperature is between -5°C and 60°C.

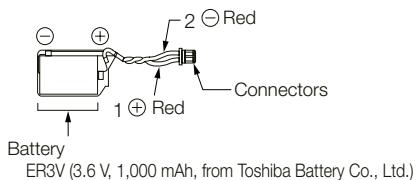

Note: The cable and connector to connect the Encoder Cable and Battery Case are not included.

## Selection Table

Description	Order Number	Contents
Battery Case (case only)	JUSP-BA01-E	The Encoder Cable and Battery are not included. (This is a replacement part for a damaged Battery Case.)
Lithium Battery	JZSP-BA01	This is a special battery that is mounted into the Battery Case.

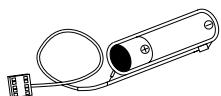

## Lithium Battery Dimensional Drawing

## When Installing a Battery on the Host Controller

Use a battery that meets the specifications of the host controller.

Use the recommended Battery given in the following table or the equivalent.

## Inrush Current Suppression Devices

Inrush current suppression devices prevent equipment from being damaged by inrush current. They are used only when using a SERVOPACK of 5 kW or higher (SGD7S-330A, -470A, -550A, -590A, or -780A) with a DC power supply input.

### Selection Tables

#### External Inrush Current Suppression Resistors

Main Circuit Power Supply	SERVOPACK Model: SGD7S-	External Inrush Current Suppression Resistor			Manufacturer	Inquiries
		Order Number	Resistance [Ω]	Rated Power [W]		
270 VDC	330A	RH120-5ΩJ	5	70	Iwaki Musen Kenkyusho Co., Ltd.	YASKAWA Controls Co., Ltd.
	470A					
	550A					
	590A					
	780A					

#### Inrush Current Suppression Resistor Short Relays

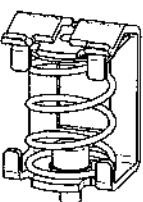

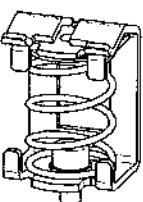

Main Circuit Power Supply	SERVOPACK Model: SGD7S-	Main Circuit DC Current [A]	Contact Specification	Recommended Inrush Current Suppressor Short Relay			Manufacturer
				Model	Voltage Rating [Vdc]	Current Rating [A]	
270 VDC	330A	34	NO	G9EA-1-B	400	60	OMRON Corporation
	470A			G9EA-1-B-CA		100	
	550A			G9EA-1-B-CA <sup>1</sup>		200	
	590A			G9EC-1-B <sup>2</sup>			
	780A						

\*1. Connect two Relays in parallel. Also, maintain the same resistance between the DC power supply and SERVOPACK for the wiring for each Relay.

\*2. This Relay is applicable only when the temperature of the Relay installation environment is 50°C or less.

## Motor Power Cable Shielding Clamp

# Software

# Software

SigmaSize+: AC Servo Capacity Selection Program

You can use the SigmaSize+ to select Servomotors and SERVOPACKs. There are two versions of the software: A cloud version\* and a stand-alone version. The software supports all standard servo products sold by YASKAWA.

\* SigmaSize+ is available in Japan only. Contact your YASKAWA representative for information on this program.

## Features

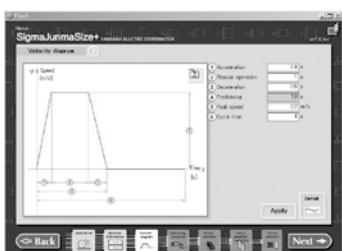

- Provides a vast amount of new product information.
  - Lets you select servo products with a wizard.
  - You can access and reuse previously entered data.

## Examples of the Servo Selection Interface

## Mechanism Selection View

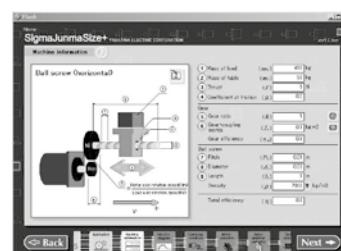

## Speed Diagram Entry View

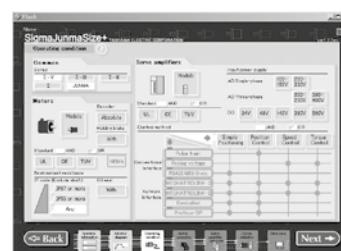

Servomotor Selection View

## Machine Specification Entry View

## Operating Conditions Selection View

SERVOPACK Selection View

## System Requirements

Item	System Requirement
Browser	Internet Explorer version 10 or later
OS	Windows Vista or Windows 7 (32-bit or 64-bit edition)*
CPU	Pentium 200 MHz min.
Memory	64 MB min. (96 MB or greater recommended)
Available Hard Disk Space	20 MB min.

\* 64-bit OS is applicable only for the stand-alone version.

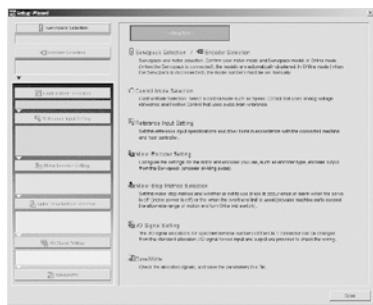

## SigmaWin+: AC Servo Drive Engineering Tool

The SigmaWin+ Engineering Tool is used to set up and optimally tune YASKAWA Sigma-series Servo Drives.

### Features

- Set parameters with a wizard.
- Display SERVOPACK data on a computer just like you would on a oscilloscope.
- Estimate moments of inertia and measure vibration frequencies.
- Display alarms and alarm diagnostics.

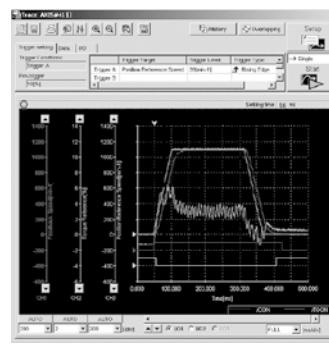

### Setting Parameters with a Wizard

### Estimating Moments of Inertia and Measuring Vibration Frequencies

### Displaying SERVOPACK Data on a Computer just like you would on an Oscilloscope

### Displaying Alarms and Alarm Diagnostics

## System Requirements

Item	System Requirement	
	Ver.5	Ver.7
Supported Languages	English and Japanese	Japanese, English, and Chinese (simplified)
OS	Windows XP, Windows Vista, or Windows 7 (32-bit or 64-bit edition)	Windows 10, Windows 8, Windows 8.1, or Windows 7 (32-bit or 64-bit edition)
Software Environment	–	.NET Framework 4.5, .NET Framework 4.6
CPU	Pentium 200 MHz min.	1 GHz min. (recommended)
Memory	64 MB min. (96 MB or greater recommended)	1 GB min. (recommended)
Available Hard Disk Space	For Standard Setup: 350 MB min. (400 MB or greater recommended for installation)	500 MB min.
Browser used to display Help	–	Internet Explorer 9 or higher

## MPE720 System Integrated Engineering Tool

MPE720 Ver.7 is a system integrated Engineering Tool that provides the complete development functionality to set up, adjust, program, maintain, and inspect not only Controller programs but also all of the devices necessary to design machine installations, including Servo Drives, AC Drives, and Distributed I/O Devices.

It is installed in a PC and operated on a PC interface through a connection between the PC and Machine Controller.

### Features

#### Complete Adjustment and Maintenance of Equipment Drive Devices

MPE720 Ver.7 connected to the Sigma-7C or MP series machine controllers can be used to set up, adjust, and maintain Servo Drives, AC Drives, and I/O Devices connected to a network. There is no need to change connections, which increases efficiency.

#### Greater Efficiency with the Best Programming Method

##### Ladder Programming

- The new user interface lets just about anyone easily use the MPE720.
- An improved EXPRESSION instruction simplifies programming calculation in ladder diagrams.
- Support is provided for all types of control, including position, speed, torque, and phase-control.

##### Motion Programming

- Positioning and interpolation can be programmed with one instruction.
- Programs can be very easily edited using expressions in a text format.
- New variable programming can provide PC-like programming.

### System Requirements

Item	Specification
CPU	1 GHz or more recommended (manufactured by Intel or other companies)
Memory Capacity	1 GB or more recommended*
Available Hard Disk Space	700 MB or more (includes standard workspace memory after installation of MPE720)
Display Resolution	1280 × 800 pixels or more recommended
CD Drive	1 (only for installation)
Communication Ports	RS-232C, Ethernet, MP2100 bus, and USB
OS	Windows 10, Windows 8, Windows 8.1, or Windows 7 (32-bit or 64-bit)
.NET Environment	.NET Framework 4.5
Supported Languages	English and Japanese

\* Expand memory if other application programs are run simultaneously with MPE720 on the same computer.  
Performance may be slow due to the use of memory by multiple application programs that are run simultaneously.

# Capacity Selection for Servomotors

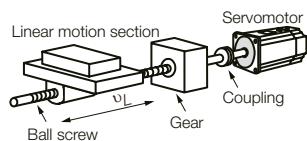

## Selecting the Servomotor Capacity

Use YASKAWA SigmaSize+, an AC servo drive capacity selection program, to select the Servomotor capacity. With the SigmaSize+, you can find the optimum Servomotor capacity by simply selecting and entering information according to instructions from a wizard.

Refer to the following selection examples to select Servomotor capacities with manual calculations rather than with the above software.

### Capacity Selection Example for a Rotary Servomotor: For Speed Control

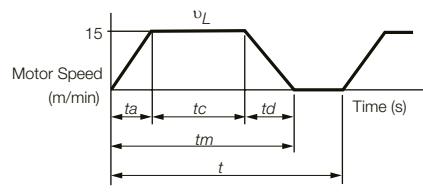

#### 1. Mechanical Specifications

Item	Code	Value
Load Speed	$v_L$	15 m/min
Linear Motion Section Mass	$m$	250 kg
Ball Screw Length	$\ell_B$	1.0 m
Ball Screw Diameter	$d_B$	0.02 m
Ball Screw Lead	$P_B$	0.01 m
Ball Screw Material Density	$\rho$	$7.87 \times 10^3 \text{ kg/m}^3$
Gear Ratio	$R$	2 (gear ratio: 1/2)
External Force on Linear Motion Section	$F$	0 N

Item	Code	Value
Gear and Coupling Moment of Inertia	$J_G$	$0.40 \times 10^{-4} \text{ kg}\cdot\text{m}^2$
Number of Feeding Operations	$n$	40 operations/min
Feeding Distance	$\ell$	0.275 m
Feeding Time	$t_m$	1.2 s max.
Friction Coefficient	$\mu$	0.2
Mechanical Efficiency	$\eta$	0.9 (90%)

#### 2. Operation Pattern

$$t = \frac{60}{n} = \frac{60}{40} = 1.5 \text{ (s)}$$

If  $t_a = t_d$ ,

$$ta = tm - \frac{60\ell}{v_L} = 1.2 - \frac{60 \times 0.275}{15} = 1.2 - 1.1 = 0.1 \text{ (s)}$$

$$tc = 1.2 - 0.1 \times 2 = 1.0 \text{ (s)}$$

#### 3. Motor Speed

- Load shaft speed  $n_L = \frac{v_L}{P_B} = \frac{15}{0.01} = 1,500 \text{ (min}^{-1}\text{)}$
- Motor shaft speed  $n_M = n_L \cdot R = 1,500 \times 2 = 3,000 \text{ (min}^{-1}\text{)}$

#### 4. Load Torque

$$T_L = \frac{(9.8 \cdot \mu \cdot m + F) \cdot P_B}{2\pi R \cdot \eta} = \frac{(9.8 \times 0.2 \times 250 + 0) \times 0.01}{2\pi \times 2 \times 0.9} = 0.43 \text{ (N}\cdot\text{m)}$$

## 5. Load Moment of Inertia

- Linear motion section

$$J_{L1} = m \left( \frac{P_B}{2\pi R} \right)^2 = 250 \times \left( \frac{0.01}{2\pi \times 2} \right)^2 = 1.58 \times 10^{-4} (\text{kg}\cdot\text{m}^2)$$

- Ball screw

$$J_B = \frac{\pi}{32} \rho \cdot l_B \cdot d_B^4 \cdot \frac{1}{R^2} = \frac{\pi}{32} \times 7.87 \times 10^3 \times 1.0 \times (0.02)^4 \cdot \frac{1}{2^2} = 0.31 \times 10^{-4} (\text{kg}\cdot\text{m}^2)$$

- Coupling  $J_G = 0.40 \times 10^{-4} \text{ kg}\cdot\text{m}^2$
- Load moment of inertia at motor shaft  

$$J_L = J_{L1} + J_B + J_G = (1.58 + 0.31 + 0.40) \times 10^{-4} = 2.29 \times 10^{-4} \text{ kg}\cdot\text{m}^2$$

## 6. Load Moving Power

$$P_O = \frac{2\pi n_M \cdot T_L}{60} = \frac{2\pi \times 3,000 \times 0.43}{60} = 135 (\text{W})$$

## 7. Load Acceleration Power

$$P_a = \left( \frac{2\pi}{60} n_M \right)^2 \frac{J_L}{ta} = \left( \frac{2\pi}{60} \times 3,000 \right)^2 \times \frac{2.29 \times 10^{-4}}{0.1} = 226 (\text{W})$$

## 8. Servomotor Provisional Selection

### ① Selection Conditions

- $T_L \leq$  Motor rated torque
- $\frac{(P_O + P_a)}{2} <$  Provisionally selected Servomotor rated output  $< (P_O + P_a)$
- $n_M \leq$  Rated motor speed
- $J_L \leq$  Allowable load moment of inertia

The following Servomotor meets the selection conditions.

- SGM7J-02A Servomotor

### ② Specifications of the Provisionally Selected Servomotor

Item	Value
Rated Output	200 (W)
Rated Motor Speed	3,000 ( $\text{min}^{-1}$ )
Rated Torque	0.637 (Nm)
Instantaneous Maximum Torque	2.23 (Nm)
Motor Moment of Inertia	$0.263 \times 10^{-4} \text{ kg}\cdot\text{m}^2$
Allowable Load Moment of Inertia	$0.263 \times 10^{-4} \times 15 = 3.94 \times 10^{-4} \text{ kg}\cdot\text{m}^2$

## 9. Verification of the Provisionally Selected Servomotor

- Verification of required acceleration torque:

$$T_P = \frac{2\pi n_M (J_M + J_L)}{60ta} + T_L = \frac{2\pi \times 3,000 \times (0.263 + 2.29) \times 10^{-4}}{60 \times 0.1} + 0.43$$

$\approx 1.23 (\text{N}\cdot\text{m}) <$  Maximum instantaneous torque...Satisfactory

- Verification of required deceleration torque:

$$T_S = \frac{2\pi n_M (J_M + J_L)}{60td} - T_L = \frac{2\pi \times 3,000 \times (0.263 + 2.29) \times 10^{-4}}{60 \times 0.1} - 0.43$$

$\approx 0.37 (\text{N}\cdot\text{m}) <$  Maximum instantaneous torque...Satisfactory

# Capacity Selection for Servomotors

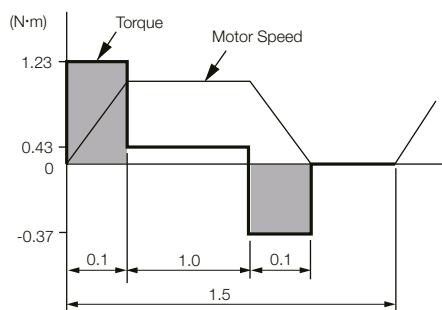

- Verification of effective torque value:

$$Trms = \sqrt{\frac{T_P^2 \cdot ta + T_L^2 \cdot tc + Ts^2 \cdot td}{t}} = \sqrt{\frac{(1.23)^2 \times 0.1 + (0.43)^2 \times 1.0 + (0.37)^2 \times 0.1}{1.5}}$$

$\approx 0.483$  (N·m) < Rated torque...Satisfactory

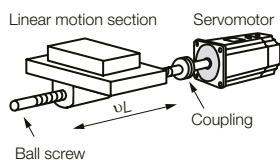

## 10. Result

It has been verified that the provisionally selected Servomotor is applicable. The torque diagram is shown below.

## Capacity Selection Example for a Rotary Servomotor: For Position Control

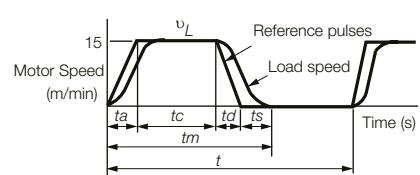

### 1. Mechanical Specifications

Item	Code	Value
Load Speed	$v_L$	15 m/min
Linear Motion Section Mass	$m$	80 kg
Ball Screw Length	$l_B$	0.8 m
Ball Screw Diameter	$d_B$	0.016 m
Ball Screw Lead	$P_B$	0.005 m
Ball Screw Material Density	$\rho$	$7.87 \times 10^3$ kg/m <sup>3</sup>
External Force on Linear Motion Section	$F$	0 N
Coupling Mass	$m_c$	0.3 kg

Item	Code	Value
Coupling Outer Diameter	$d_c$	0.03 m
Number of Feeding Operations	$n$	40 rotations/min
Feeding Distance	$\ell$	0.25 m
Feeding Time	$t_m$	1.2 s max.
Electrical Stopping Precision	$\delta$	$\pm 0.01$ mm
Friction Coefficient	$\mu$	0.2
Mechanical Efficiency	$\eta$	0.9 (90%)

### 2. Speed Diagram

$$t = \frac{60}{n} = \frac{60}{40} = 1.5 \text{ (s)}$$

If  $ta = td$  and  $ts = 0.1$  (s),

$$ta = tm - ts - \frac{60\ell}{v_L} = 1.2 - 0.1 - \frac{60 \times 0.25}{15} = 0.1 \text{ (s)}$$

$$tc = 1.2 - 0.1 - 0.1 \times 2 = 0.9 \text{ (s)}$$

### 3. Motor Speed

- Load shaft speed  $n_L = \frac{v_L}{P_B} = \frac{15}{0.005} = 3,000 \text{ (min}^{-1}\text{)}$
- Motor shaft speed Direct coupling gear ratio  $1/R = 1/1$   
 $n_M = n_L \cdot R = 3,000 \times 1 = 3,000 \text{ (min}^{-1}\text{)}$

### 4. Load Torque

$$T_L = \frac{(9.8 \mu \cdot m + F) \cdot P_B}{2\pi R \cdot \eta} = \frac{(9.8 \times 0.2 \times 80 + 0) \times 0.005}{2\pi \times 1 \times 0.9} = 0.139 \text{ (N}\cdot\text{m)}$$

### 5. Load Moment of Inertia

- Linear motion section  $J_{L1} = m \left( \frac{P_B}{2\pi R} \right)^2 = 80 \times \left( \frac{0.005}{2\pi \times 1} \right)^2 = 0.507 \times 10^{-4} \text{ (kg}\cdot\text{m}^2)$
- Ball screw  $J_B = \frac{\pi}{32} \rho \cdot l_B \cdot d_B^4 = \frac{\pi}{32} \times 7.87 \times 10^3 \times 0.8 \times (0.016)^4 = 0.405 \times 10^{-4} \text{ (kg}\cdot\text{m}^2)$
- Coupling  $J_C = \frac{1}{8} m_C \cdot d_C^2 = \frac{1}{8} \times 0.3 \times (0.03)^2 = 0.338 \times 10^{-4} \text{ (kg}\cdot\text{m}^2)$
- Load moment of inertia at motor shaft  
 $J_L = J_{L1} + J_B + J_G = (1.58 + 0.31 + 0.40) \times 10^{-4} = 2.29 \times 10^{-4} \text{ kg}\cdot\text{m}^2$

### 6. Load Moving Power

$$P_O = \frac{2\pi n_M \cdot T_L}{60} = \frac{2\pi \times 3,000 \times 0.139}{60} = 43.7 \text{ (W)}$$

### 7. Load Acceleration Power

$$P_a = \left( \frac{2\pi}{60} n_M \right)^2 \frac{J_L}{ta} = \left( \frac{2\pi}{60} \times 3,000 \right)^2 \times \frac{1.25 \times 10^{-4}}{0.1} = 123.4 \text{ (W)}$$

### 8. Servomotor Provisional Selection

- ① Selection Conditions
- $T_L \leq$  Motor rated torque
  - $\frac{(P_o + P_a)}{2} <$  Provisionally selected Servomotor rated output  $< (P_o + P_a)$
  - $n_M \leq$  Rated motor speed
  - $J_L \leq$  Allowable load moment of inertia

The following Servomotor meets the selection conditions.

- SGM7J-01A Servomotor

② Specifications of the Provisionally Selected Servomotor

Item	Value
Rated Output	100 (W)
Rated Motor Speed	3,000 (min <sup>-1</sup> )
Rated Torque	0.318 (Nm)
Instantaneous Maximum Torque	1.11 (Nm)
Motor Moment of Inertia	$0.0659 \times 10^{-4} \text{ kg}\cdot\text{m}^2$
Allowable Load Moment of Inertia	$0.0659 \times 10^{-4} \times 35 = 2.31 \times 10^{-4} \text{ kg}\cdot\text{m}^2$
Encoder Resolution	16,777,216 pulses/rev [24 bits]

# Capacity Selection for Servomotors

## 9. Verification of the Provisionally Selected Servomotor

- Verification of required acceleration torque:

$$T_P = \frac{2\pi n_M (J_M + J_L)}{60ta} + T_L = \frac{2\pi \times 3,000 \times (0.0659 + 1.25) \times 10^{-4}}{60 \times 0.1} + 0.139 \\ \approx 0.552 \text{ (N}\cdot\text{m}) < \text{Maximum instantaneous torque...Satisfactory}$$

- Verification of required deceleration torque:

$$T_S = \frac{2\pi n_M (J_M + J_L)}{60td} - T_L = \frac{2\pi \times 3,000 \times (0.0659 + 1.25) \times 10^{-4}}{60 \times 0.1} - 0.139 \\ \approx 0.274 \text{ (N}\cdot\text{m}) < \text{Maximum instantaneous torque...Satisfactory}$$

- Verification of effective torque value:

$$Trms = \sqrt{\frac{T_P^2 \cdot ta + T_L^2 \cdot tc + T_S^2 \cdot td}{t}} = \sqrt{\frac{(0.552)^2 \times 0.1 + (0.139)^2 \times 0.9 + (0.274)^2 \times 0.1}{1.5}} \\ \approx 0.192 \text{ (N}\cdot\text{m}) < \text{Rated torque...Satisfactory}$$

It has been verified that the provisionally selected Servomotor is applicable in terms of capacity. Position control is considered next.

## 10. Positioning Resolution

The electrical stopping precision  $\delta$  is  $\pm 0.01$  mm, so the positioning resolution  $\Delta_\ell$  is 0.01 mm. The ball screw lead  $P_B$  is 0.005 m, so the number of pulses per motor rotation is calculated with the following formula.

$$\text{The number of pulses per revolution (pulses)} = \frac{P_B}{\Delta_\ell} = \frac{5 \text{ mm/rev}}{0.01 \text{ mm}} = 500 \text{ (pulses/rev)} < \text{Encoder resolution [16777216 (pulses/rev)]}$$

The number of pulses per motor rotation is less than the encoder resolution (pulses/rev), so the provisionally selected Servomotor can be used.

## 11. Reference Pulse Frequency

The load speed  $v_L$  is 15 m/min, or  $1,000 \times 15 / 60$  mm/s and the positioning resolution (travel distance per pulse) is 0.01 mm/pulse, so the reference pulse frequency is calculated with the following formula.

$$vs = \frac{1,000 v_L}{60 \times \Delta_\ell} = \frac{1,000 \times 15}{60 \times 0.01} = 25,000 \text{ (pps)}$$

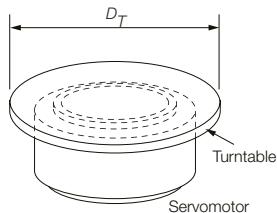

The reference pulse frequency is less than the maximum input pulse frequency,\* so the provisionally selected Servomotor can be used.

\* Refer to the specifications in the SERVOPACK manual for the maximum input pulse frequency.

It has been verified that the provisionally selected Servomotor is applicable for position control.

## Capacity Selection Example for Direct Drive Servomotors

### 1. Mechanical Specifications

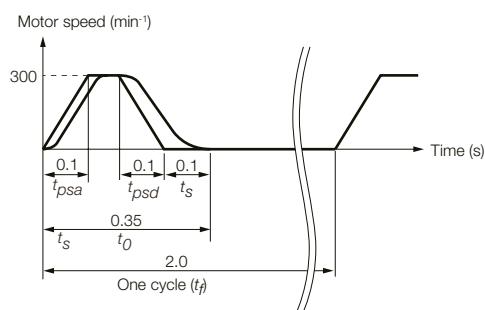

Item	Code	Value
Turntable Mass	W	12 kg
Turntable Diameter	D <sub>T</sub>	300 mm
Rotational Angle per Cycle	θ	270 deg
Positioning Time	t <sub>o</sub>	0.35 s

Item	Code	Value
Acceleration/Deceleration Time	t <sub>p</sub> = t <sub>psa</sub> = t <sub>psd</sub>	0.1 s
Operating Frequency	t <sub>f</sub>	2 s
Load Torque	T <sub>L</sub>	0 Nm
Settling Time	t <sub>s</sub>	0.1 s

### 2. Motor Speed of Direct Drive Servomotor

$$N_O = \frac{\theta}{360} \times \frac{60}{(t_0 - t_p - t_s)} = \frac{270}{360} \times \frac{60}{(0.35 - 0.1 - 0.1)} = 300 \text{ (min}^{-1}\text{)}$$

### 3. Operation Pattern

### 4. Load Moment of Inertia

$$J_L = \frac{1}{8} \times D_T^2 \times W = \frac{1}{8} \times (300 \times 10^{-3})^2 \times 12 = 0.135 \text{ (kg} \cdot \text{m}^2\text{)}$$

### 5. Load Acceleration/Deceleration Torque

$$T_a = J_L \times 2\pi \times \frac{N_O/60}{t_p} = 0.135 \times 2\pi \times \frac{300/60}{0.1} = 42.4 \text{ (N} \cdot \text{m}\text{)}$$

### 6. Provisional Selection of Direct Drive Servomotor

#### ① Selection Conditions

- Load acceleration/deceleration torque < Instantaneous maximum torque of Direct Drive Servomotor
- Load moment of inertia < Allowable load moment of inertia ratio (J<sub>R</sub>) x Moment of inertia of Direct Drive Servomotor (J<sub>M</sub>)

The following Servomotor meets the selection conditions.

- SGMCV-17CEA11

#### ② Specifications of the Provisionally Selected Servomotor

Item	Value
Rated Torque	17 (Nm)
Instantaneous Maximum Torque	51 (Nm)
Moment of Inertia (J <sub>M</sub> )	0.00785 (kgm <sup>2</sup> )
Allowable Load Moment of Inertia Ratio (J <sub>R</sub> )	25

# Capacity Selection for Servomotors

## 7. Verification of the Provisionally Selected Servomotor

- Verification of required acceleration torque:

$$T_{Ma} = \frac{(J_L + J_M) \times N_O}{9.55 \times t_{psa}} = \frac{(0.135 + 0.00785) \times 300}{9.55 \times 0.1}$$

$\approx 44.9$  (N·m) < Maximum instantaneous torque...Satisfactory

- Verification of required deceleration torque:

$$T_{Md} = -\frac{(J_L + J_M) \times N_O}{9.55 \times t_{psd}} = -\frac{(0.135 + 0.00785) \times 300}{9.55 \times 0.1}$$

$\approx -44.9$  (N·m) < Maximum instantaneous torque...Satisfactory

- Verification of effective torque value:

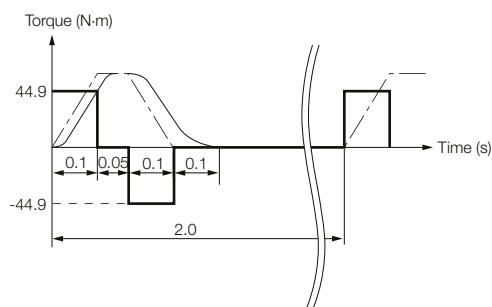

$$T_{rms} = \sqrt{\frac{T_{Ma}^2 \times t_{psa} + T_L^2 \times t_c + T_{Md}^2 \times t_{psd}}{t_f}} = \sqrt{\frac{44.9^2 \times 0.1 + 0^2 \times 0.05 + (-44.9)^2 \times 0.1}{2}}$$

$\approx 14.2$  (N·m) < Rated torque...Satisfactory

$t_c$  = Time of constant motor speed =  $t_0 - t_s - t_{psa} - t_{psd}$

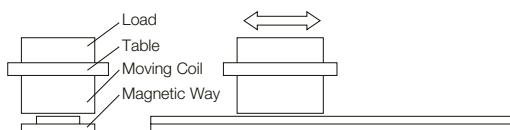

## 8. Result

It has been verified that the provisionally selected Servomotor is applicable.  
The torque diagram is shown below.

## Capacity Selection Example for Linear Servomotors

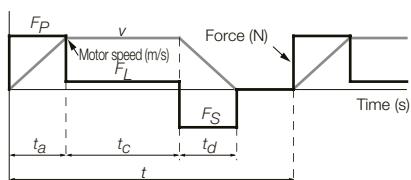

### 1. Mechanical Specifications

Item	Code	Value
Load Mass	$m_w$	1 kg
Table Mass	$m_T$	2 kg
Motor Speed	$v$	2 m/s
Feeding Distance	$l$	0.76 m
Friction Coefficient	$\mu$	0.2

Item	Code	Value
Acceleration Time	$t_a$	0.02 s
Constant-speed Time	$t_c$	0.36 s
Deceleration Time	$t_d$	0.02 s
Cycle Time	$t$	0.5 s
External Force on Linear Motion Section	$F$	0 N

### 2. Operation Pattern

### 3. Steady-State Force (Excluding Servomotor Moving Coil)

$$F_L = \{9.8 \times \mu \times (m_w + m_t)\} + F = 9.8 \times 0.2 \times (1 + 2) + 0 = 5.88 \text{ (N)}$$

### 4. Acceleration Force (Excluding Servomotor Moving Coil)

$$F_P = (m_W + m_T) \times \frac{v}{t_a} + F_L = (1 + 2) \times \frac{2}{0.02} + 5.88 = 305.88 \text{ (N)}$$

### 5. Provisional Selection of Linear Servomotor

① Selection Conditions

- $F_p \leq \text{Maximum force} \times 0.9$
- $F_s \leq \text{Maximum force} \times 0.9$
- $F_{rms} \leq \text{Rated force} \times 0.9$

The following Servomotor Moving Coil and Magnetic Way meet the selection conditions.

- SGLGW-60A253CP-E Linear Servomotor Moving Coil
- SGLGM-60□□□C-E Linear Servomotor Magnetic Way

② Specifications of the Provisionally Selected Servomotor

Item	Value
Maximum Force	440 (N)
Rated Force	140 (N)
Moving Coil Mass ( $m_M$ )	0.82 (kg)
Servomotor Magnetic Attraction ( $F_{att}$ )	0 (N)

### 6. Verification of the Provisionally Selected Servomotor

- Steady-State Force  

$$F_L = \mu \{9.8 \times (m_w + m_t + m_M) + F_{att}\} = 0.2 \{9.8 \times (1 + 2 + 0.82) + 0\} = 7.5 \text{ (N)}$$

- Verification of Acceleration Force

$$F_P = (m_W + m_T + m_M) \times \frac{v}{t_a} + F_L = (1 + 2 + 0.82) \times \frac{2}{0.02} + 7.5 \\ = 389.5 \text{ (N)} \leq \text{Maximum force} \times 0.9 (= 396 \text{ N}) \dots \text{Satisfactory}$$

- Verification of Deceleration Force

$$F_S = (m_W + m_T + m_M) \times \frac{v}{t_a} - F_L = (1 + 2 + 0.82) \times \frac{2}{0.02} - 7.5 \\ = 374.5 \text{ (N)} \leq \text{Maximum force} \times 0.9 (= 396 \text{ N}) \dots \text{Satisfactory}$$

- Verification of Effective Force

$$F_{rms} = \sqrt{\frac{F_P^2 \cdot t_a + F_L^2 \cdot t_c + F_S^2 \cdot t_d}{t}} = \sqrt{\frac{389.5^2 \times 0.02 + 7.5^2 \times 0.36 + 374.5^2 \times 0.02}{0.5}} \\ = 108.3 \text{ (N)} \leq \text{Rated force} \times 0.9 (= 132.3 \text{ N}) \dots \text{Satisfactory}$$

### 7. Result

It has been verified that the provisionally selected Servomotor is applicable.

# Capacity Selection for Regenerative Resistors

If the regenerative power exceeds the amount that can be absorbed by charging the smoothing capacitor, a regenerative resistor is used.

## Regenerative Power and Regenerative Resistance

The rotational energy of a driven machine such as a Servomotor that is returned to the SERVOPACK is called regenerative power. The regenerative power is absorbed by charging a smoothing capacitor. When the regenerative power exceeds the capacity of the capacitor, it is consumed by a regenerative resistor. (This is called resistance regeneration.) The Servomotor is driven in a regeneration state in the following circumstances:

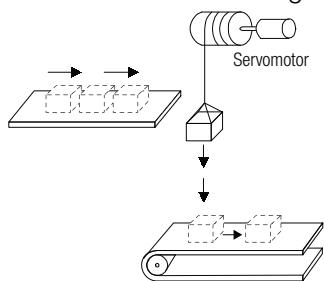

- While decelerating to a stop during acceleration/deceleration operation
- While performing continuous downward operation on a vertical axis
- During continuous operation in which the Servomotor is rotated by the load (i.e., a negative load)

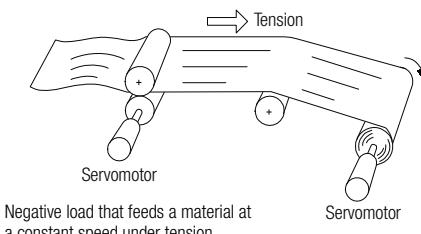

### Important

You cannot use the resistance regeneration provided by the SERVOPACK for continuous regeneration. For continuous operation with a negative load, you must design a system that also includes a Power Regenerative Converter or Power Regenerative Unit (for example, YASKAWA model D1000 or R1000). If regenerative power is not appropriately processed, the regenerative energy from the load will exceed the allowable range and damage the SERVOPACK. Examples of negative loads are shown below.

- Motor Drive to Lower Objects without a Counterweight

- Motor Drive for Feeding

Negative load that feeds a material at a constant speed under tension

## Types of Regenerative Resistors

The following regenerative resistors can be used.

- Built-in regenerative resistor: A regenerative resistor that is built into the SERVOPACK. Not all SERVOPACKs have built-in regenerative resistors.
- External Regenerative Resistor: A regenerative resistor that is connected externally to a SERVOPACK. These resistors are used when the smoothing capacitor and built-in regenerative resistor in the SERVOPACK cannot consume all of the regenerative power.

SERVOPACK Model	Built-in Regenerative Resistor	External Regenerative Resistor
SGD7S-	R70A, R90A, 1R6A, 2R8A, R70F, R90F, 2R1F, 2R8F	None
	3R8A, 5R5A, 7R6A, 120A, 180A, 200A, 330A	Standard feature <sup>*1</sup>
	470A, 550A, 590A, 780A	None
SGD7W-	1R6A, 2R8A, 5R5A, 7R6A	Standard feature <sup>*1</sup>
SGD7C-	1R6A, 2R8A, 5R5A, 7R6A	Standard feature <sup>*1</sup>

<sup>\*1</sup>. Refer to the "Built-In Regenerative Resistor" section for the specifications of the regenerative resistors built into SERVOPACKs.

<sup>\*2</sup>. An optional external Regenerative Resistor Unit is required.

## Selecting External Regenerative Resistor

Use YASKAWA SigmaJunmaSize+, an AC servo drive capacity selection program, to determine if you need an External Regenerative Resistor.

You can use one of the following two methods to manually calculate whether an External Regenerative Resistor is required. Refer to the following information if you do not use the SigmaJunmaSize+.

- Refer to chapter "Simple Calculation".
- Refer to chapter "Calculating the Regenerative Energy".

### Simple Calculation

When driving a Servomotor with a horizontal shaft, check if an External Regenerative Resistor is required using the following calculation method.

Note: If you use the SGD7S-470A, -550A, -590A, or -780A, always connect an External Regenerative Resistor.

#### SERVOPACKs without Built-in Regenerative Resistors:

#### **SGD7S-R70A, -R90A, -1R6A, -2R8A, -R70F, -R90F, -2R1F, and -2R8F**

The total amount of energy that can be charged in the capacitors is given in the following table. If the rotational energy ( $E_S$ ) of the Servomotor and load exceeds the value in the following table, then connect an External Regenerative Resistor.

Applicable SERVOPACK	Processable Regenerative Energy (Joules)	Remarks
SGD7S-	R70A, R90A, 1R6A	24.2
	2R8A	31.7

Calculate the rotational energy ( $E_S$ ) of the servo system with the following equation:

$$E_S = J \times (n_M)^2 / 182 \text{ (Joules)}$$

- $J = J_M + J_L$
- $J_M$ : Servomotor moment of inertia ( $\text{kg} \times \text{m}^2$ )
- $J_L$ : Load moment of inertia at motor shaft ( $\text{kg} \times \text{m}^2$ )
- $n_M$ : Servomotor operating motor speed ( $\text{min}^{-1}$ )

# Capacity Selection for Regenerative Resistors

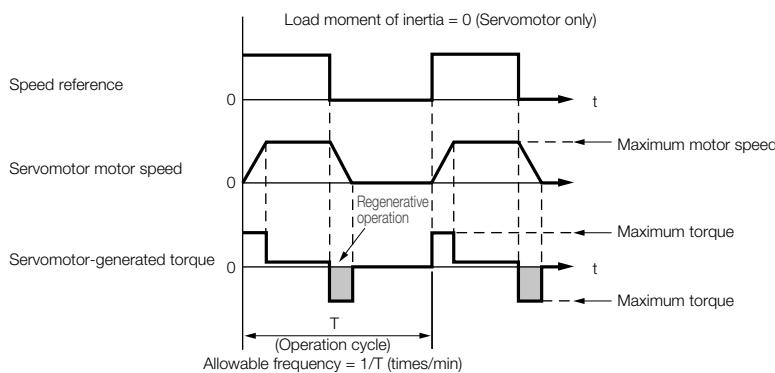

## SERVOPACKs with Built-in Regenerative Resistors:

**SGD7S-3R8A, -5R5A, -7R6A, -120A, -180A, -200A, and -330A**

**SGD7W-1R6A, -2R8A, -5R5A, and -7R6A**

**SGD7C-1R6A, -2R8A, -5R5A, and -7R6A**

Use the following equation to calculate the allowable frequency for regenerative operation. The following operating conditions were used: Operation cycle from a speed of 0 to the maximum motor speed to 0 ( $\text{min}^{-1}$ ) with acceleration and deceleration operation. If the frequency of the operation cycle ( $1/T$ ) is lower than the allowable frequency in the calculation results, an External Regenerative Resistor is not necessary. Finally, do the calculation with the actual operating speed and load moment of inertia to determine if an External Regenerative Resistor is required.

## Operating Conditions for Calculating the Allowable Regenerative Frequency

$$\text{Allowable frequency} = \frac{\text{Allowable frequency for regenerative operation for Servomotor without load}^*}{(1+n)} \times \left( \frac{\text{Maximum motor speed}}{\text{Operating motor speed}} \right)^2 (\text{time/min})$$

- $n = J_L/J_M$
- $J_M$ : Servomotor moment of inertia ( $\text{kg}\times\text{m}^2$ )
- $J_L$ : Load moment of inertia at motor shaft ( $\text{kg}\times\text{m}^2$ )

\* Assign the related value given in the table in Allowable Frequency for Regenerative Operation for Servomotor without Load

# Capacity Selection for Regenerative Resistors

## Calculating the Regenerative Energy

This section shows how to calculate the regenerative resistor capacity for the acceleration/deceleration operation shown in the following figure.

## Calculation Procedure for Regenerative Resistor Capacity

Step	Item	Code	Formula
1	Calculate the rotational energy of the Servomotor.	$E_s$	$E_s = Jn_m^2/182$
2	Calculate the energy consumed by load loss during the deceleration period	$E_l$	$E_l = (\pi/60) n_m T_l t_d$ Note: If the load loss is unknown, calculate the value with $E_l$ set to 0.
3	Calculate the energy lost from Servomotor winding resistance.	$E_m$	(Value calculated from the graphs in Servomotor Winding Resistance Loss) $\times t_d$
4	Calculate the energy that can be absorbed by the SERVOPACK.	$E_c$	Calculate from the graphs in SERVOPACK-absorbable Energy
5	Calculate the energy consumed by the regenerative resistor.	$E_k$	$E_k = E_s - (E_l + E_m + E_c)$
6	Calculate the required regenerative resistor capacity ( $W$ ).	$W_k$	$W_k = E_k/(0.2 \times T)$

\*1. The 0.2 in the equation for calculating  $W_k$  is the value when the regenerative resistor's utilized load ratio is 20%.

\*2. The units for the various symbols are given in the following table.

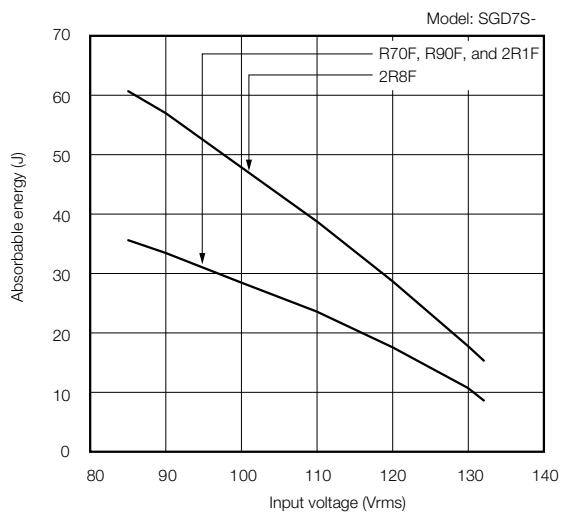

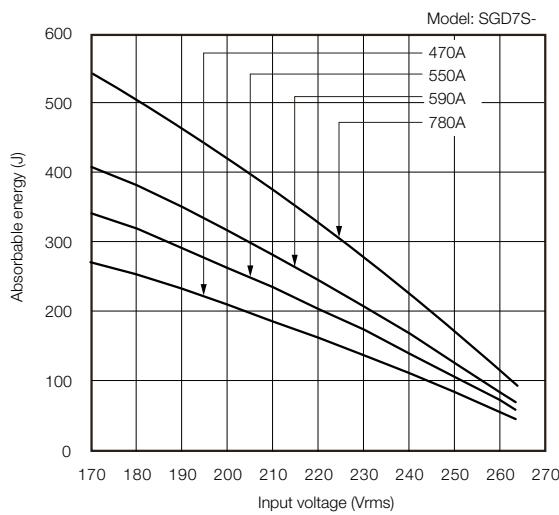

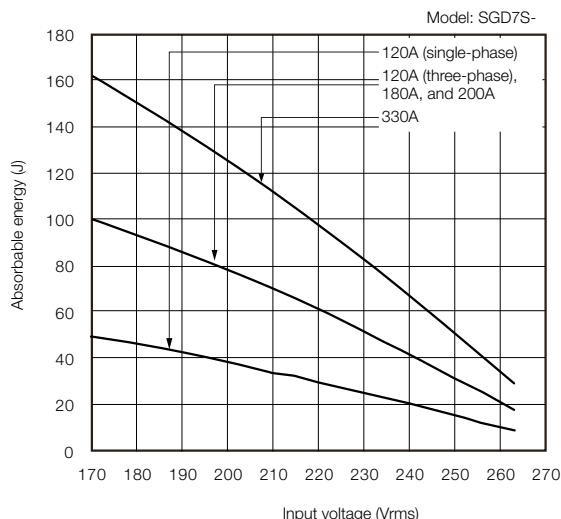

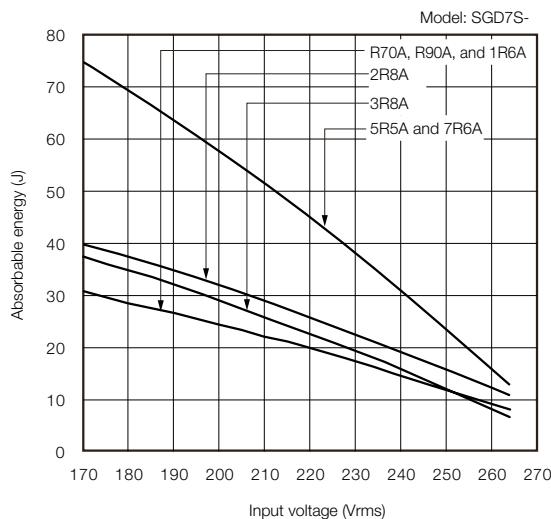

Code	Description	Code	Description
$E_s$ to $E_k$	Energy in joules (J)	$T_l$	Load torque (Nm)
$W_k$	Required regenerative resistor capacity (W)	$t_d$	Deceleration stopping time (s)
$J$ $= J_m + J_l$ (kgm <sup>2</sup> )		$T$	Servomotor repeat operation cycle (s)
$n_m$	Servomotor motor speed (min <sup>-1</sup> )		

If the value of  $W_k$  does not exceed the capacity of the built-in regenerative resistor of the SERVOPACK, an External Regenerative Resistor is not required. If the value of  $W_k$  exceeds the capacity of the built-in regenerative resistor, install an External Regenerative Resistor with a capacity equal to the value for  $W$  calculated above.

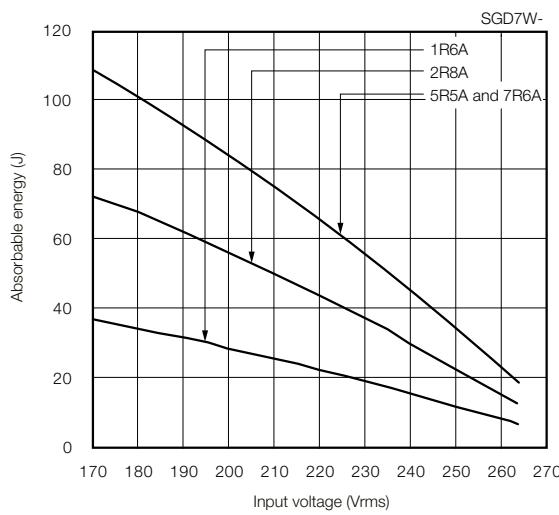

## SERVOPACK-absorbable Energy

The following figures show the relationship between the SERVOPACK's input power supply voltage and its absorbable energy.

\*1. Estimates are provided for RoHS-compliant products. The model numbers have an “-E” suffix.

\*2. CE Marking certification has not yet been received for SGMCS-□□M and SGMCS-□□N Direct Drive Servomotors.

CE Marking certification has been received for the following Direct Drive Servomotors: SGMCS-□□B, SGMCS-□□C, SGMCS-□□D, and SGMCS-□□E. Contact your YASKAWA representative if the CE Marking label is required.

\*3. The model numbers of the Magnetic Ways of Linear Servomotors are given in parentheses.

\*4. CE Marking certification has been received. Contact your YASKAWA representative if the CE Marking label is required.

\*5. UL Marking certification has been received for all SGMCS models with the exception of SGMCS-□□M and SGMCS-□□N.

\*6. UL Marking certification has been received for all SGM7F models with the exception of SGM7F-□□M and SGM7F-□□N.

## Details of Warranty

### Warranty Period

The warranty period for a product that was purchased (hereinafter called the “delivered product”) is one year from the time of delivery to the location specified by the customer or 18 months from the time of shipment from the YASKAWA factory, whichever is sooner.

### Warranty Scope

YASKAWA shall replace or repair a defective product free of charge if a defect attributable to Yaskawa occurs during the above warranty period.

This warranty does not cover defects caused by the delivered product reaching the end of its service life and replacement of parts that require replacement or that have a limited service life.

This warranty does not cover failures that result from any of the following causes.

- Improper handling, abuse, or use in unsuitable conditions or in environments not described in product catalogs or manuals, or in any separately agreed-upon specifications
- Causes not attributable to the delivered product itself
- Modifications or repairs not performed by YASKAWA
- Use of the delivered product in a manner in which it was not originally intended
- Causes that were not foreseeable with the scientific and technological understanding at the time of shipment from YASKAWA
- Events for which YASKAWA is not responsible, such as natural or human-made disasters

### Limitations of Liability

- YASKAWA shall in no event be responsible for any damage or loss of opportunity to the customer that arises due to failure of the delivered product.
- YASKAWA shall not be responsible for any programs (including parameter settings) or the results of program execution of the programs provided by the user or by a third party for use with programmable Yaskawa products.
- The information described in product catalogs or manuals is provided for the purpose of the customer purchasing the appropriate product for the intended application. The use thereof does not guarantee that there are no infringements of intellectual property rights or other proprietary rights of Yaskawa or third parties, nor does it construe a license.
- YASKAWA shall not be responsible for any damage arising from infringements of intellectual property rights or other proprietary rights of third parties as a result of using the information described in catalogs or manuals.

### Suitability for Use

- It is the customer’s responsibility to confirm conformity with any standards, codes, or regulations that apply if the YASKAWA product is used in combination with any other products.
- The customer must confirm that the YASKAWA product is suitable for the systems, machines, and equipment used by the customer.
- Consult with YASKAWA to determine whether use in the following applications is acceptable. If use in the application is acceptable, use the product with extra allowance in ratings and specifications, and provide safety measures to minimize hazards in the event of failure.
- Outdoor use, use involving potential chemical contamination or electrical interference, or use in conditions or environments not described in product catalogs or manuals
- Nuclear energy control systems, combustion systems, railroad systems, aviation systems, vehicle systems, medical equipment, amusement machines, and installations subject to separate industry or government regulations
- Systems, machines, and equipment that may present a risk to life or property
- Systems that require a high degree of reliability, such as systems that supply gas, water, or electricity, or systems that operate continuously 24 hours a day
- Other systems that require a similar high degree of safety

- Never use the product for an application involving serious risk to life or property without first ensuring that the system is designed to secure the required level of safety with risk warnings and redundancy, and that the YASKAWA product is properly rated and installed.
- The circuit examples and other application examples described in product catalogs and manuals are for reference. Check the functionality and safety of the actual devices and equipment to be used before using the product.
- Read and understand all use prohibitions and precautions, and operate the YASKAWA product correctly to prevent accidental harm to third parties.

### Specifications Change

The names, specifications, appearance, and accessories of products in product catalogs and manuals may be changed at any time based on improvements and other reasons. The next editions of the revised catalogs or manuals will be published with updated code numbers. Consult with your YASKAWA representative to confirm the actual specifications before purchasing a product.
